Hello WT,
The other way to send duplicates of the same file is to drag the same file twice to the DnD. Make sure you enable interval timer. You will need to "XMIT ALL" to make this work. Enabling header modem will add an additional RSID between the two segments. If you don't want to increase the tx time with header modem enable. Select the same modem as what's listed in the TX pane.

Subject: [paNBEMS] FLAMP - preamble/hdr repeat during multiple sends

Hello All,

Last night during my weekly digital bulletins via a local repeater I had an instance where one of the stations missed the preamble for one of the files. The hdr report was set to send "2x" but either through a glitch in the transmission or the station being late on the uptake or me not having the TxID (the real culprit here) set he missed the preamble. Since this is being sent as a broadcast there is limited interaction for a fill. I also have a listener who is not yet a Ham who listens by scanner. The missed preamble seems to be a problem in these conditions. I was wondering if the developers would consider an option to repeat the headers with each repeat of the file's transmission to help alleviate this problem. I have the files set to send "2x" as well. If all goes well everything works flawlessly. When the humans get involved things sometimes don't work.

Please let me know if this is a possible future.

Many thanks for a great software.

Running Fldigi 3.22.02 and Flamp 2.22.0 on Ubuntu 14.04 LTS, Windows Vista, and Debian Wheezy on a Beaglebone. No problems have presented as far as I can tell.

Regards,

W.T.

But now I just thought of one more scenario. What happens when I call for fill requests and one person needs fills from file 1, another from file 2 and a third needs fills from file 3? I think maybe a better work around is to just do 1x Xmit and just keep restarting the 2nd and 3rd transmission manually which ties me to the station during the bulletin broadcast but that's no big deal for a 20 minute transmission. -Dave, KB3FXI

Would it be possible to use the script function to do all of that? -
Just write the script to do it once, copy the relevant section, then
paste it twice so that the script goes through the whole thing three times.

6450. PEMA/ACS Winter Weather Activation

Yahoo group: paNBEMS (2012 — 2018)
Date: 2014-12-09 05:18:58 UTC
From: David Kleber
Topic: 6450 Message: 6450

Dec 9, 12:10 AM ET
PEMA/ACS Weather Activation.
PEMA State EOC and the Eastern Area Office will be activating for winter weather beginning Tuesday Dec 9, 2014 at 2PM ET through mid-day Wednesday Dec 10. The possible effected areas for severe winter storm weather is focused on North Eastern PA.
paNBEMS stations are encouraged to monitor:7.0725 USB, 1500 Hz Center between 8am ET to 6pm ET and3.583 USB, 1500 Hz Center between 6pm ET to 8am ET
Weather observations and situation reports from stations in the affected areas are encouraged via FLMSG and/or FLAMP.
de KB3FXIPEMA/ACS Digital Manager

6451. PEMA/ACS WX update

Yahoo group: paNBEMS (2012 — 2018)
Date: 2014-12-09 14:05:42 UTC
From: David Kleber
Topic: 6451 Message: 6451

PEMA/ACS is in "enhanced" mode and not in full activation mode.
If the status changes, I'll post an update here to the list.
paNBEMS will remain in standby mode until further notice but all stations in the affected winter storm areas are encouraged to send weather observations, status reports and situation reports via FLMSG or FLAMP today on 7.0725 USB, 1500 Hz center and tonight after 8pm ET on 3.583 USB.
-Dave Kleber, KB3FXIpaNBEMS Founder and PEMA/ACS Digital Manager
Here's the updated bulletin I just transmitted via FLAMP / MFSK-32 on 7.0725 USB
Dec 9, 2014 8:55 AM ET
PEMA/ACS Weather - enhanced status
PEMA State EOC and the Eastern Area Office will be in an “enhanced” status for winter weather beginning Tuesday Dec 9, 2014 at 2PM ET through mid-day Wednesday Dec 10. The possible effected areas for severe winter storm weather is focused on North Eastern PA.
paNBEMS stations are encouraged to monitor:7.0725 USB, 1500 Hz Center between 8am ET to 6pm ET and3.583 USB, 1500 Hz Center between 6pm ET to 8am ET
Weather observations and situation reports from stations in the affected areas are encouraged via FLMSG and/or FLAMP.

Attachments: 1 described; binary payloads are missing from this source WARC

Hello Dave,
There is another option, one that Charles, N5PVL uses and it's called timed events. Attached is a script that might be useful to you. Below is the same as the attached file. In bold next to EVENT TIMES: is when the transmission will be started. The end time does not necessarily mean the abrupt stop of the broadcast as the current file will be will transmitted until finished. This will extend the actual stop time by that amount. The time entered is UTC and not local time. You will need to make changes to the PATH and FILE command to suite your needs. The EVENT:OFF command was selected and will require you to manually start the events in the event config panel (the button next to the UTC time indictor). Once the event is started at the specified time the content of the queue will be repeatedly transmitted. If you are going to transmit this over HF using a slow mode, adjusting TX INTERVAL to 1 min allows the opportunity to inject additional RSID's.
FLAMP_CONFIG
CLEAR TXQ: # Clear the transmit queueEVENT TYPE:"Continuous at"
          # Event typeEVENT TIMES:2100-2120   # TX between hours XXXX:YYYY
(UTC HHMM)EVENT TIMED:ON   # Used timed eventsEVENT:OFF
          # Manually start Events from Event panelINTERVAL:ON   #
Turn on interval timerTX INTERVAL:8   # TX segment 8 mins longRX
INTERVAL:1   # RX segment 1 second longHDR REPEAT:1
       # Header repeat count 1XMIT REPEAT:1   # File TX repeat count
1BLOCKS:80   # TX block sizeBASE:64
Use base 64 encodingPATH:"C:\Directory_of_file_location" # Location of files in the
directory path.COMP:ON   # Files to follow will use
compressionFILE:"Filename.ext","FileDescription" # Load files with description"COMP:OFF
                          # Files to follow will not use
compressionFILE:"Filename.ext","FileDescription" # Load files with description"
Note: If you do not have interval timer enabled all queue items regardless of repeat counts (data or header) will be concentrated into a single transmit [XMIT ALL/EVENTS]. If you need multiple RSID's you must enable interval timer. FLDIGI will only issue RSID's when there is a state change between RX and TX. Interval timer provide the means for this to occur.

Making some changes to FLAMP to minimize missed RSID/Header Info. In the end if you are not there to receive it there isn't much one can do.
Checking on the Multiple file fill request. See what the current behavior is and make adjustment if needed.
Robert, KK5VD

Hello WT,
The other way to send duplicates of the same file is to drag the same file twice to the DnD. Make sure you enable interval timer. You will need to "XMIT ALL" to make this work.
Enabling header modem will add an additional RSID between the two segments. If you don't want to increase the tx time with header modem enable. Select the same modem as what's listed in the TX pane.

Subject: [paNBEMS] FLAMP - preamble/hdr repeat during multiple sends

Hello All,

Last night during my weekly digital bulletins via a local repeater I had an instance where one of the stations missed the preamble for one of the files. The hdr report was set to send "2x" but either through a glitch in the transmission or the station being late on the uptake or me not having the TxID (the real culprit here) set he missed the preamble. Since this is being sent as a broadcast there is limited interaction for a fill. I also have a listener who is not yet a Ham who listens by scanner. The missed preamble seems to be a problem in these conditions. I was wondering if the developers would consider an option to repeat the headers with each repeat of the file's transmission to help alleviate this problem. I have the files set to send "2x" as well. If all goes well everything works flawlessly. When the humans get involved things sometimes don't work.

Please let me know if this is a possible future.

Many thanks for a great software.

Running Fldigi 3.22.02 and Flamp 2.22.0 on Ubuntu 14.04 LTS, Windows Vista, and Debian Wheezy on a Beaglebone. No problems have presented as far as I can tell.

6455. RSID Detection Issues

Yahoo group: paNBEMS (2012 — 2018)
Date: 2014-12-10 20:39:23 UTC
From: Charles J. Hargrove
Topic: 6455 Message: 6455

Does anyone know of specific RSID detection issues with v3.22.02?
Whether it is an XP or Win7 (both using FLdigi since 2011), we are
having problems decoding and switching modes after receiving RSID.
With the indicator turned on, which worked in previous versions, we
do not even get the indicator in the receive pane. RSID is turned on
for all modes in RCV and XMIT. The only check boxes turned ON are "Mark
prev freq/mode", "Retain tx freq lock" and "Disable freq change". The
"Allow errors" is set to 2, the "Squelch open" is set to 5 seconds and
all stations are set to 2 seconds for "Pre-Signal Tone".

Ideas of where to look as the online manual did not help.

He was concerned about an entry that someone posted on an Amateur Radio Page on Facebook. I did a little research into both the post and the person doing the posting.Someone posted a message on the page telling people to refrain from using certain frequencies stating that PEMA ACS was conducting an emergency NET. He also misidentified himself as being a PEMA ACS Liaison. He does not, nor did he ever represent PEMA ACS in any manner. We had not even heard of him until last night.The person who made the post was a teenager who is fairly new to amateur radio. He earned his license earlier this year and became active with his local county RACES unit. I spoke with the county's RACES Coordinator who is familiar with this person and he will address the situation with the teen.The post has since been removed from Facebook but it left me very concerned.This incident provides me with the opportunity to remind you that PEMA ACS will NEVER tell you what to do or not do. My staff and I will never tell you to stay off any frequency. And PEMA has very restrictive social media policies so you will never see us posting about NETs on Facebook or any other social media platform. I contacted the board administrator as soon as I saw the post and had it pulled. If you should ever see or hear of anything like this in the future, please know that it will not have come from us. And please let me know so that I can deal with the problem. I take my promise to you very seriously and wanted to reassure you that this was not from PEMA ACS.Could you please forward this email to any amateur radio operators within your organization. I want to make sure that everyone knows this post did not originate from our organization.Thank you,SusanSusan D. Dave, I'm pretty close to finishing the changes needed to make FLAMP operate as requested. Plus a way of sending the queue contents that have missing blocks only [SHIFT] + [XMT ALL]. It's working on the Macintosh and once it's tested on the other two platforms it will be pushed to the beta team.

Hello All,

Last night during my weekly digital bulletins via a local repeater I had an instance where one of the stations missed the preamble for one of the files. The hdr report was set to send "2x" but either through a glitch in the transmission or the station being late on the uptake or me not having the TxID (the real culprit here) set he missed the preamble. Since this is being sent as a broadcast there is limited interaction for a fill. I also have a listener who is not yet a Ham who listens by scanner. The missed preamble seems to be a problem in these conditions. I was wondering if the developers would consider an option to repeat the headers with each repeat of the file's transmission to help alleviate this problem. I have the files set to send "2x" as well. If all goes well everything works flawlessly. When the humans get involved things sometimes don't work.

Please let me know if this is a possible future.

Many thanks for a great software.

This looks like a good upgrade that corrects a few bugs. I just tested my output on MT63 1k long and it looks like it's back to normal. The output on MT63 with the last release was very low and that is now corrected.
Thanks to those who submitted bug reports. paNBEMS hasn't been using MT63 for a while and I wasn't aware that there was a problem until someone submitted the low output bug report.
73 and Merry Christmas!

Subject: [NBEMSham] fldigi-3.22.03 released

Posted to http://www.w1hkj.com

Source Forge git master repository updated to 3.22.03

Version 3.22.03 * maintenance release

  * changed all berlios lists references to source forge

  * CW xmt filter
    - Added user selectable Windowed-sinc transmit bandpass filter.
    - Useful for tuning transmit sound at QRQ operating speeds.

  * CW configuration
    - updated documentation for the new bandpass transmit shaping

  * DTMF
    - Corrected dtmf command execution within trx tx loop

  * FFT filter
    - Corrected initialization of fft filter.

  * ARQ/KISS IO state conflict
    - Ensure all state flags reflect selected mode.
    - Toggle IO mode in software.

  * Window title
    - changed to append vice replace window title with transceiver name

  * Xmt Audio Stream
    - Restored MT63 output power
    - Modified output audio stream processing to prevent audio codec roll over

```
  * RX Text
    - reject Mousewheel (3rd mouse button) closure when in Rx text panel

  * OpenBSD
    - compatibility fixes for OpenBSD

  * LOGGER EXPORT
    - Corrected struct position of log field 'QSL_VIA'

  * Documentation
    - Removed references to Precompiled Binaries
    - Added illustration of command line parameters
      . on Win8.1
      . on Mint UI launcher properties

  * LOG lookup
    - Changed debug level to VERBOSE; easier to see response without DEBUG clutter

  * Lion/Yosemite madness
    - OS-X changed allowable application behavior after user presses the Red-X
      "I'm outta here" button.  Fix to prevent system uncaught exception behavior.

73 and Best Wishes for a Healthy 2015

Dave, W1HKJ

Subject: [paNBEMS] Fw: [NBEMSham] fldigi-3.22.03 released

This looks like a good upgrade that corrects a few bugs. I just tested my
output on MT63 1k long and it looks like it's back to normal. The output on
MT63 with the last release was very low and that is now corrected.

Thanks to those who submitted bug reports. paNBEMS hasn't been using MT63
for a while and I wasn't aware that there was a problem until someone
submitted the low output bug report.

73 and Merry Christmas!

Marty,

I acknowledged:

W1QH
KA1WVM
KA1EOU
KB1NEK

When I called for area 1 check-ins.

The check-in process is now:

PEMA Western Region
PEMA Central Region
PEMA Eastern Region
and then the call areas.

That might have thrown things off.

Sri if I didn't hear you.

Regards,

W.T.

Well that is something I can answer:

Sunday Mornings at 11:00AM
Frequency: 7.0725
Center: 1500hz

The NJ NBEMS net meeting at 7.073 (1500) at 9:30AM on Sunday mornings if you can make it.

Just for a check here is the roster list from this morning:

CALL ST
WN3LIF PA NCS
N3TN PA
N3GYW PA
N3CRM PA
KB3DXU PA
KC3BRA PA
KB3YCK PA
WB3GCK PA
K3JV PA
KB1NEK MA
W1QH CT
W2TLJ NY
KD2DO NY
KC2VUT NJ
NU2E NJ
N2TIF NY
AC2IR NY
KC8FZH WV
N4AAA VA
KD9XB VA
N9VT VA
W8KF OH
W3IAG NY
KA1WVM MA
KA1EOU CT
N3OGD PA

The only one that was spotty at my station was KA1WVM and he was relayed by KB9XB and N3CRM.

Sorry I didn't hear any others from 1 land. I was wondering because I usually get a slew of you guys from north and east of me.

I just scolled back to through the window and the call for 1 stations did go out after the Eastern Region request.

Regards,

W.T.

WT,
Another impressive Luzerne bulletin you forwarded on 3.583 USB tonight after yours and the paNBEMS bulletin nets.
Could you do a favor and make a new post here on what mode you used to send that lengthy bulletin, how long it took, your FLAMP TX settings (repeats and block size) and your reception reports.
Thanks in advance and keep up the great work!

6473. The Sunday Night Digital Broadcast via repeater

Yahoo group: paNBEMS (2012 — 2018)
Date: 2014-12-30 19:10:04 UTC
From: W. T. Jones
Topic: 6473 Message: 6473

KB3FXI asked me to provide some details on my Luzerne County ARES Digital Broadcast that I send every Sunday night (well, almost every Sunday night - I am human) through the 146.61 WB3FKQ repeater in Wilkes-Barre, PA. So here in as brief a form as my verbose fingers can produce is the detail.

First, the 'Why' and that is probably the most simple and straight forward part of this. I like Fldigi and I like learning how the internal workings of Fldigi, Flmsg, and Flamp function and interact. That is the primary reason. I don't fall in 'like' with many programs but Fldigi has intrigued me since I first stumbled across it while looking for a program to do PSK31 on Linux. The secondary reason to get more Fldigi users in our county. Yes, they could get on the air and make QSOs but the finer points may never be explored that way. If I provided a forum that showcases Fldigi and it parts then more Hams might become interested. That last reason is that as the ACS Officer and EC for Luzerne County I kind of drew a line in the sand and said our communications plan will be a hybrid of Voice (FM & SSB), Fldigi, and Winlink with an appropriate job for each. So far it has worked.

The broadcast goes out in 2 parts. The first part at 9:00PM is run by a macro through Fldigi. It sends files. Everything is broken up into files that take less than the repeater's time out timer allows. Being aware of that makes me keep things short and to the point. At first it was a problem getting the transmitter to shut off so the repeater would reset. Thanks to the good documentation that W1HKJ and his team provides the answer became evident. The Null modem shuts down the xvcr and the repeater resets. Here is a snippet of the macro which I am sure is very elementary to many of you.

```
<TX>\n
<!MODEM:NULL>\n
<!WAIT:2>\n
<!MODEM:MFSK32>\n
Now on MFSK32\n
<FILE:/home/wtj1/ares_weekly_broadcasts/saving.txt>\n
<!MODEM:NULL>\n
<!WAIT:2>\n
<!MODEM:MFSK32>\n
<FILE:/home/wtj1/ares_weekly_broadcasts/intro.txt>\n
<!MODEM:NULL>\n
<!WAIT:2>\n
<!MODEM:MFSK32>\n
....
```

Each file contains some portion of the broadcast that makes it through the repeater in less than 3 minutes. Null shuts down my xmtr, the wait holds off for 2 seconds, and then the next modem command activates the transmitter. File simply grabs a text file off the disk and sends it.

The reason for doing this way is I want the "listeners" to experience Fldigi's abilities as well as Flmsg. So the contents lists what I put in the broadcast:

This Week's Broadcast contents:

1. WX from the Scranton/Wilkes-Barre Airport (KAVP).
2. Current Versions of Fldigi programs.
3. Luzerne County ARES Announcements.
4. Area Amateur Radio Club News.
5. Weekly paNBEMS Bulletin.
6. Weekly NBEMS Training Messages.
7. Net Schedules - updated 12/27/2014
8. Weekly Image Transmission.
9. Fldigi Tip of the Week.
10. Ethics and Operating Procedures for the Radio Amateur
11. New EPA Section Manager Appointed.
11. Closing.

The WX uses Fldigi's WX macro command to get the wx from the NWS:
<WX:KAVP>\n

I include information from our ARES group such as classes or drills that are upcoming. Information from our area clubs such as Murgas ARC, the Jonestown Mountain Repeater Assn, and our QCWA Chapter.

On Sunday evening, KB3FXI, sends the ACS State Bulletin on 80 meters. I capture that and for this part of the broadcast I break it up into 3 minute or less parts and insert it into the broadcast.

The Weekly NBEMS Training messages use Flmsg to send a radiogram format message that opens Flmsg on the listener's computer so they experience receiving an Flmsg. It makes sure that the computer at the other end is configured properly for NBEMS. The message content at this time is a series of 73 messages that explain how to send traffic and operate in an NBEMS net. They are sent two a week. The way this happens is so simple thanks to the help I received on the paNBEMS forum. I simply use Flmsg to create a file and then drag it into flwrap and it creates a file that contains all the information to be sent through Fldigi. The receiving station sees the ...start and [WRAP..] etc and opens Flmsg. You can also bring up Flmsg and transmit it and then copy and paste the info in the receive window of Fldigi into a file and save it. It works both ways. Then the FILE macro command sends it.
<FILE:/home/wtj1/ares_weekly_broadcasts/training_nbems/training-32.m2s.wrap>\n

The other use of Flmsg is the Net Schedule CSV file. I could just send the file but what fun would that be? I want the end user to experience and use Flmsg. So I use Flmsg to create a CSV message and then do the same thing as with the radiograms. Create the file and use the FILE macro command to send it.

There is a saying that I find so true. "The container will be interesting only so long so the content must be more interesting." People will enjoy

fldigi for a while but they don't listen to the broadcast to see Fldigi work. For the first several times they may but after that the content has to be what keeps them listening.

So each week I provide an image. This week I "borrowed" the Happy New Year image from the VOA broadcast. In the past it has been Halloween Pumpkins, A Charlie Brown Thanksgiving, a Pearl Harbor message, and so on. I try to keep the content interesting. I include an Fldigi Tip of the Week that is taken from the Fldigi Documentation. This week was how to use Fldigi for RTTY contesting. Hey! This stuff doesn't have to be serious all the time. I even included a Chanukah Greeting which resulted in a ton of "thank you" emails.

On the Sunday before Christmas I went retro. I remember in years past our local 6 meter RTTY group always sent Christmas pictures via RTTY. So I gathered up a bunch of the old pictures from a RTTY Art web site and sent them. You can check out that web site at http://artscene.textfiles.com/rtty/COLLECTION/. It brought back some good memories for me and I ended up going on till 2:00AM with requests to resend ones that were missed. It was a good time, having fun with Fldigi, and making some Hams happy.

So that is the first part of the broadcast.

The second part is all Flamp but I stuff everything into one file except the images and the nets.csv file. Flamp is probably one of the greatest tools that I don't completely understand but I am getting there. The configuration of Flamp allows you to set the "interval" so that Flamp will stop sending at 3 minute intervals and let the repeater reset. No timing worries. It takes care of it for you. The documentation has more than enough information on how to do it. I have to say that in my years of beating on computers and other related items the documentation for Fldigi and its parts is some the best that I have seen.

The Flamp xmsn is for the crusty old guys who know what is happening and really don't need to see the files roll by. They get the file, save it, and read it at their leisure.

The creation of the file is simple. I open a text file with gedit (I am a linux user) and just copy the files into it. For the messages, I bring them up in Flmsg, use file--> view--> Plain text option and copy the results into the file. BTW, if you are a Linux user and decide to do this be sure to save the file in a windows format for those poor underprivileged windows users. That should create a storm.

I use PSK125RC5 as the modem and send the headers and file twice so repeats are rarely needed. Sometimes they are but most of the time the second go fills in the missed blocks. What I really need to have Flamp do is send the headers just before it sends the files rather headers twice then file twice. I am sure KB3FXI and his developer contacts are working on that.

BTW, the first broadcast is sent using MFSK-32 to accommodate the pictures.

So in an hour's time I get to play with all the features I can think of with Fldigi, the Ham community gets some good info and has some fun, and all of us learn a thing or two.

The results: I put in the broadcast that if you copy it send me an email. If they do then they get a QSL card confirming it. I sent out 51 cards for the Christmas broadcast. That is 51 listeners. It didn't happen over night. I have been doing this for 4 months now. The good thing is that people are trying it, having a problem, and sending me an email for some help. The use of Fldigi (and other digital programs) has grown in our neck of the woods. I have SWLs who are copying the broadcast with scanners now. Even my neighbor's son has copied it as a school project on digital communications.

The idea is to keep the content interesting. Don't go hide bound and think that it has to be all about Emergency Communications. Put some funny content in. Don't be afraid to make note of an area Ham who has done something good. Think of this as a weekly newsletter. You will develop facility with Fldigi as will your listeners. That is the win. When the fit hits the shan that facility will pay dividends big time.

Last, not everyone can be there on Sunday night. I found that Fldigi can create a .wav file of what you send. So I save the broadcast in a .wav file and the Flamp in .wav and store them on our ARES web site. The downloads each week are growing and they are not all from Luzerne County. Seems that the content is working. I don't want to send this out as an email. It defeats the purpose of doing it. At least the .wav file makes them use Fldigi for view it. And everything happens the same way as if they copied it off the air.

You can find the .wav files at http://www.w3luz.org if you'd like to take a 30 minute listen. If you are pressed for time then grab the Flamp .wav file.

I hope this encourages others to give it a try. The easy part is Fldigi. The hard part is being creative with the content.

And sorry for being so long winded. I bit off a chunk of the Blarney stone.

Regards,

W.T.

From: Michael A Serowik
Topic: 6474 Message: 6474

Greetings.

I am now trying to get back into Amateur radio, life just
wanted my full attention.

I did have FLDIGI working on a XP Machine and I had to get a new desktop.

Is there someone I can talk to off list to assist me in setting up FLDIGI
again?

Thanks

Mike

Sander,

We do an ARES voice net on Tuesday night at 8:00PM on 146.61 which is a traffic handling training net. Figure if the Ham can pass a radiogram by voice then he'll probably be OK for an ICS-213 if someone else writes it.

At 8:30PM we switch to digital mode and the net is run exactly like our 40 Meter paNBEMS net. The idea is that the stations can get their feet wet doing exactly the same thing locally, make the mistakes, have some FRIENDLY corrections applied, and they will eventually jump to the HF side of it. The value added feature of doing this locally on our repeater is I can grab the microphone and talk to the fellow having the problem. Some time a friendly voice helps get the station over the bump. And since we now have Hams that have solved things like the Windows 8 configuration issues we can get instant help for the station who hit the bump in the road.

And we have fun with it. I assigned the stations a paragraph from the "Twas the Night Before Christmas" and had them create an Flmsg. The source was a web link with that wonderful old poem on it. This was a disguised "You got an email in your inbox that needs to be transferred to Flmsg" exercise. Computer skills are important. What many of us take for-granted, like copy and paste, might be a challenge to some others. So this was a no pressure effort to help gain experience.

I do admit that I have some that would rather give a Daily Report rather than part of a Christmas Poem but most of the group gets into the fun of it. And if you can keep it fun it becomes a win-win situation. The container will be interesting only so long so the content has to be the interesting part. How interesting is a word processor? Its the words in it that are interesting.

The NJ guys are going after the concept and having some great success with the repeater digital net. Talk about taking the ball and running with it!

Regards,

W.T.

Technically, '\n' is a new line, and '\r' would be a Carriage return,
but in this context, I suspect they serve the same purpose.

6486. NBEMS setup with RTTY and DOT Matrix printer

Yahoo group: paNBEMS (2012 — 2018)
Date: 2014-12-31 23:10:58 UTC
From: Jim Rayburn
Topic: 6473 Message: 6486

I am looking for a way to monitor a frequency, computer, and DOT matrix printer.

My county EMA director is trying to determine if this setup can be done. His purpose is to monitor an RTTY frequency for weather conditions and print to the DOT matrix for a hard copy and retention. The vital part is the printer for a hard copy. I presented him with the capabilities of using a computer and FLDIGI for monitoring the desired frequency can be done. Can anyone provide a possible solution for interfacing the computer/software (or another piece of software) with a DOT matrix printer?

Thank you,
Jim

Date: 2015-01-01 05:35:37 UTC
From: W. T. Jones
Topic: 6473 Message: 6487

Jim,

On the first broadcast you set the length of pause interval in the macro.
<!MODEM:NULL>\n
<!WAIT:2>\n <--- change the value 2 to the number of seconds that you want
to pause.
<!MODEM:MFSK32>\n

If you are in a situation where there might be incoming emergency
transmissions set it longer.

In Flamp, on the configure tab, you can set the Interval value Rx Duration
Seconds in the same manner. If you think that there will be incoming breaks
for something urgent set it longer so the operator running the broadcast
can cancel it to handle the urgent issue.

'\n' is as pointed out a newline character. There is a difference between
Windows and LInux's handling of them. That was the reason for stating to be
sure to save any files that will be read by Windows users as Windows files.
If a Windows user opens a file in notepad that is formatted for Linux all
they get is one long run-on line. If they open it in Wordpad it formats
correctly. Linux editors like leafpad or gedit have an option for saving it
in a proper format. This is only a concern when sending a file via Flamp.
Flmsg text formats correctly. You may see things like \t (tab) or \r
(return). You can see the list at:

http://manpages.ubuntu.com/manpages/hardy/man1/echo.1posix.html

Happy New Year!

Jim,

The bang (!) causes certain macro commands to be parsed and executed during the sending of the macro.

If I were an expert on this I'd be able to explain it better but I know that without the bang all the macro commands that change things like the modem will execute immediately when the macro is started. So the bang tells Fldigi to execute the tag as it comes to it rather than setting up Fldigi at the start of the macro. That gives you the ability to change the modems and wait when you want to. Without the bang the commands are referred to as immediate.

Here is the link in the 3.22 online help:
http://www.w1hkj.com/FldigiHelp-3.22/inline_macro_page.html

I would explain further but I believe in that old saying. "Be quiet when you don't have the right answer!" So after much trial and error I found the above. I hope it helps. Maybe one of the more in the know people on the list can offer a more detailed explanation.

73

Thanks for posting the great report, WT. There may be a new NBEMS net popping up here in WPA on a VHF repeater. Once that's formalized, I'll put out an announcement if the NCS wants to open it up to a wide audience. It's great to see NBEMS working its way on to the VHF/UHF repeaters. There are a lot of seldom used machines out there. Keep up the great work there, WT! -Dave, KB3FXIpaNBEMS

Subject: [paNBEMS] The Sunday Night Digital Broadcast via repeater

<!--#yiv9989227856 #yiv9989227856 .yiv9989227856ygrp-photo-title{clear:both;font-size:smaller;height:15px;overflow:hidden;text-align:center;width:75px;}#yiv9989227856 div.yiv9989227856ygrp-photo{background-position:center;background-repeat:no-repeat;background-color:white;border:1px solid black;height:62px;width:62px;}#yiv9989227856 div.yiv9989227856photo-title a, #yiv9989227856 div.yiv9989227856photo-title a:active, #yiv9989227856 div.yiv9989227856photo-title a:hover, #yiv9989227856 div.yiv9989227856photo-title a:visited {text-decoration:none;}#yiv9989227856 div.yiv9989227856attach-table div.yiv9989227856attach-row {clear:both;}#yiv9989227856 div.yiv9989227856attach-table div.yiv9989227856attach-row div {float:left;}#yiv9989227856 p {clear:both;padding:15px 0 3px 0;overflow:hidden;}#yiv9989227856 div.yiv9989227856ygrp-file {width:30px;}#yiv9989227856 div.yiv9989227856attach-table div.yiv9989227856attach-row div div a {text-decoration:none;}#yiv9989227856 div.yiv9989227856attach-table div.yiv9989227856attach-row div div span {font-weight:normal;}#yiv9989227856 div.yiv9989227856ygrp-file-title {font-weight:bold;}#yiv9989227856 --> <!--#yiv9989227856 #yiv9989227856ygrp-mkp {border:1px solid #d8d8d8;font-family:Arial;margin:10px 0;padding:0 10px;}#yiv9989227856 #yiv9989227856ygrp-mkp hr {border:1px solid #d8d8d8;}#yiv9989227856 #yiv9989227856ygrp-mkp #yiv9989227856hd {color:#628c2a;font-size:85%;font-weight:700;line-height:122%;margin:10px 0;}#yiv9989227856 #yiv9989227856ygrp-mkp #yiv9989227856ads {margin-bottom:10px;}#yiv9989227856 #yiv9989227856ygrp-mkp .yiv9989227856ad {padding:0 0;}#yiv9989227856 #yiv9989227856ygrp-mkp .yiv9989227856ad p {margin:0;}#yiv9989227856 #yiv9989227856ygrp-mkp .yiv9989227856ad a {color:#0000ff;text-decoration:none;}-->

KB3FXI asked me to provide some details on my Luzerne County ARES Digital Broadcast that I send every Sunday night (well, almost every Sunday night - I am human) through the 146.61 WB3FKQ repeater in Wilkes-Barre, PA. So here in as brief a form as my verbose fingers can produce is the detail.

First, the 'Why' and that is probably the most simple and straight forward part of this. I like Fldigi and I like learning how the internal workings of Fldigi, Flmsg, and Flamp function and interact. That is the primary reason. I don't fall in 'like' with many programs but Fldigi has intrigued me since I first stumbled across it while looking for a program to do PSK31 on Linux. The secondary reason to get more Fldigi users in our county. Yes, they could get on the air and make QSOs but the finer points may never be explored that way. If I provided a forum that showcases Fldigi and it parts then more Hams might become interested. That last reason is that as the ACS Officer and EC for Luzerne County I

kind of drew a line in the sand and said our communications plan will be a hybrid of Voice (FM & SSB), Fldigi, and Winlink with an appropriate job for each. So far it has worked.

The broadcast goes out in 2 parts. The first part at 9:00PM is run by a macro through Fldigi. It sends files. Everything is broken up into files that take less than the repeater's time out timer allows. Being aware of that makes me keep things short and to the point. At first it was a problem getting the transmitter to shut off so the repeater would reset. Thanks to the good documentation that W1HKJ and his team provides the answer became evident. The Null modem shuts down the xvcr and the repeater resets. Here is a snippet of the macro which I am sure is very elementary to many of you.

```
 <TX>\n
<!MODEM:NULL>\n
<!WAIT:2>\n
<!MODEM:MFSK32>\n
Now on MFSK32\n
<FILE:/home/wtj1/ares_weekly_broadcasts/saving.txt>\n
<!MODEM:NULL>\n
<!WAIT:2>\n
<!MODEM:MFSK32>\n
<FILE:/home/wtj1/ares_weekly_broadcasts/intro.txt>\n
<!MODEM:NULL>\n
<!WAIT:2>\n
<!MODEM:MFSK32>\n
....
```

Each file contains some portion of the broadcast that makes it through the repeater in less than 3 minutes. Null shuts down my xmtr, the wait holds off for 2 seconds, and then the next modem command activates the transmitter. File simply grabs a text file off the disk and sends it.

The reason for doing this way is I want the "listeners" to experience Fldigi's abilities as well as Flmsg. So the contents lists what I put in the broadcast:

This Week's Broadcast contents:

1. WX from the Scranton/Wilkes-Barre Airport (KAVP).
2. Current Versions of Fldigi programs.
3. Luzerne County ARES Announcements.
4. Area Amateur Radio Club News.
5. Weekly paNBEMS Bulletin.
6. Weekly NBEMS Training Messages.
7. Net Schedules - updated 12/27/2014
8. Weekly Image Transmission.
9. Fldigi Tip of the Week.
10. Ethics and Operating Procedures for the Radio Amateur
11. New EPA Section Manager Appointed.
11. Closing.

The WX uses Fldigi's WX macro command to get the wx from the NWS: <WX:KAVP>\n

I include information from our ARES group such as classes or drills that are upcoming. Information from our area clubs such as Murgas ARC, the Jonestown Mountain Repeater Assn, and our QCWA Chapter.

On Sunday evening, KB3FXI, sends the ACS State Bulletin on 80 meters. I capture that and for this part of the broadcast I break it up into 3 minute or less parts and insert it into the broadcast.

The Weekly NBEMS Training messages use Flmsg to send a radiogram format message that opens Flmsg on the listener's computer so they experience receiving an Flmsg. It makes sure that the computer at the other end is configured properly for NBEMS. The message content at this time is a series of 73 messages that explain how to send traffic and operate in an NBEMS net. They are sent two a week. The way this happens is so simple thanks to the help I received on the paNBEMS forum. I simply use Flmsg to create a file and then drag it into flwrap and it creates a file that contains all the information to be sent through Fldigi. The receiving station sees the ...start and [WRAP..] etc and opens Flmsg. You can also bring up Flmsg and transmit it and then copy and paste the info in the receive window of Fldigi into a file and save it. It works both ways. Then the FILE macro command sends it. <FILE:/home/wtj1/ares_weekly_broadcasts/training_nbems/training-32.m2s.wrap>\n

The other use of Flmsg is the Net Schedule CSV file. I could just send the file but what fun would that be? I want the end user to experience and use Flmsg. So I use Flmsg to create a CSV message and then do the same thing as with the radiograms. Create the file and use the FILE macro command to send it.

There is a saying that I find so true. "The container will be interesting only so long so the content must be more interesting." People will enjoy fldigi for a while but they don't listen to the broadcast to see Fldigi work. For the first several times they may but after that the content has to be what keeps them listening.

So each week I provide an image. This week I "borrowed" the Happy New Year image from the VOA broadcast. In the past it has been Halloween Pumpkins, A Charlie Brown Thanksgiving, a Pearl Harbor message, and so on. I try to keep the content interesting. I include an Fldigi Tip of the Week that is taken from the Fldigi Documentation. This week was how to use Fldigi for RTTY contesting. Hey! This stuff doesn't have to be serious all the time. I even included a Chanukah Greeting which resulted in a ton of "thank you" emails.

On the Sunday before Christmas I went retro. I remember in years past our local 6 meter RTTY group always sent Christmas pictures via RTTY. So I gathered up a bunch of the old pictures from a RTTY Art web site and sent them. You can check out that web site at http://artscene.textfiles.com/rtty/COLLECTION/. It brought back some good memories for me and I ended up going on till 2:00AM with requests to resend ones that were missed. It was a good time, having fun with Fldigi, and making some Hams happy.

So that is the first part of the broadcast.

The second part is all Flamp but I stuff everything into one file except the images and the nets.csv file. Flamp is probably one of the greatest tools that I don't completely understand but I am getting there. The configuration of Flamp allows you to set the "interval" so that Flamp will stop sending at 3 minute intervals and let the repeater reset. No timing worries. It takes care of it for you. The documentation has more than enough information on how to do it. I have to say that in my years of beating on computers and other related items the documentation for Fldigi and its parts is some the best that I have seen.

The Flamp xmsn is for the crusty old guys who know what is happening and really don't need to see the files roll by. They get the file, save it, and read it at their leisure.

The creation of the file is simple. I open a text file with gedit (I am a linux user) and just copy the files into it. For the messages, I bring them up in Flmsg, use file--> view--> Plain text option and copy the results into the file. BTW, if you are a Linux user and decide to do this be sure to save the file in a windows format for those poor underprivileged windows users. That should create a storm.

I use PSK125RC5 as the modem and send the headers and file twice so repeats are rarely needed. Sometimes they are but most of the time the second go fills in the missed blocks. What I really need to have Flamp do is send the headers just before it sends the files rather headers twice then file twice. I am sure KB3FXI and his developer contacts are working on that.

BTW, the first broadcast is sent using MFSK-32 to accommodate the pictures.

So in an hour's time I get to play with all the features I can think of with Fldigi, the Ham community gets some good info and has some fun, and all of us learn a thing or two.

The results: I put in the broadcast that if you copy it send me an email. If they do then they get a QSL card confirming it. I sent out 51 cards for the Christmas broadcast. That is 51 listeners. It didn't happen over night. I have been doing this for 4 months now. The good thing is that people are trying it, having a problem, and sending me an email for some help. The use of Fldigi (and other digital programs) has grown in our neck of the woods. I have SWLs who are copying the broadcast with scanners now. Even my neighbor's son has copied it as a school project on digital communications.

The idea is to keep the content interesting. Don't go hide bound and think that it has to be all about Emergency Communications. Put some funny content in. Don't be afraid to make note of an area Ham who has done something good. Think of this as a weekly newsletter. You will develop facility with Fldigi as will your listeners. That is the win. When the fit hits the shan that facility will pay dividends big time.

Last, not everyone can be there on Sunday night. I found that Fldigi can create a .wav file of what you send. So I save the broadcast in a .wav file and the Flamp in .wav and store them on our ARES web site. The downloads each week are growing and they are not all from Luzerne County. Seems that the content is working. I don't want to send this out as an email. It defeats the purpose of doing it. At least the .wav file makes them use Fldigi for view it. And everything happens the same way as if they copied it off the air.

You can find the .wav files at http://www.w3luz.org if you'd like to take a 30 minute listen. If you are pressed for time then grab the Flamp .wav file.

I hope this encourages others to give it a try. The easy part is Fldigi. The hard part is being creative with the content.

And sorry for being so long winded. I bit off a chunk of the Blarney stone.

Regards,

W.T.

6492. SGARN Multicast Back

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-01-03 22:47:22 UTC
From: Charles Brabham
Topic: 6492 Message: 6492

The SGARN overnight multicast of the current ARRL bulletins, NBEMS EMCOM info and the W1AW schedule will resume this evening.

Information on reception of the SGAN multicast can be found at:

http://www.sgarn.org/forum_library/index.php?topic=9.0

Nightly schedule is from 0200-1100 UTC on 10.142 USB +1000

Digital mode is MT63-500L

The SGARN multicast is celebrating one year of continuous operation. A few nights have been missed due to weather events, power outages, etc. but very few. As always, reception reports are always appreciated.

73 DE Charles, N5PVL

Hey Ron,

The FLAMP Bulletin/Liaison/Practice Net is active and going strong.

Freq 3.583Mhz
CF: 1700htz
Time: 1930L

Olivia 8/500 is initial mode with a switch to MFSK-32 for Flamp.

Note on the Center Freq. It is general very close to 1700. The last time I was NCS there was a RTTY contest on so I moved it up to 2200 to give the RTTY guys some room. KB3FXI runs the net normally and he is usually within 2 or 3 Hertz of 1700 if at all possible. Give it a try and be sure to take the bulletin back to your county and resend it during the week. The more it gets out the better.

73

I would suspect that tonight on 80m will be a different story with the RTTY contest. It should be interesting. Hopefully I'll find a clear spot, and then hopefully we won't get stomped on. Keep in mind that our backup spots are 30m 10.135 USB40m 7.0725 USBBoth at 1500 Hz Center (+/- 500 Hz) Tonight might wind up being a 30m test. -Dave, KB3FXI

6497. FLMg configuration question

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-01-04 20:07:23 UTC
From: mdannhardt@...
Topic: 6497 Message: 6497

Hi all and happy new year.
Downloaded and installed FLMsg 2.0.6 onto WinXP.
On the menu Config, tab Socket, there are fields to configure Web Server IP address and socket. Currently when I start FLMsg I get an error that indicates it can not connect to the socket. I don't have a web server running locally so I guess I'm not surprised.

However I am not clear as to the purpose of the Web Server connection and if it is a problem or not. (I am able to send radiograms and I received the practice ones earlier today during the net. I was lurking :-0)

Can someone explain the purpose. The manual I downloaded doesn't mention it, the online manual says:

Configure html forms server, used to edit and display custom html forms.

So is it that if I had some sort of web server capable of delivering forms I could get new ones? Is there a server on the Internet with a URL of fixed IP I can use?

If not, do I just live with the error message each time I start FLMsg?

Mike

6498. FLDig and receiving picture files

Today I was lurking on the digital practice net and received the picture that was sent. It was requested to be resent and as the second one came in, the first window with first picture was lost.

after I had the second picture I was trying to save it but could not figure out how to do that.

Is there a way to save a received picture file?

Thanks,
Mike , KA4CDN
Fairfax County VA

The RTTY Roundup should go dark at 2400UTC so hopefully there will not be too much QRM. Either to us or to the RTTY guys. Been a heck of a good contest on 80 today.

30 meters? What digital modes are too wide for 30. I believe it is limited to the narrow modes, but I've never seen this defined. Can anyone help me on this, love 30 but I've only run CW there

Currently there is no bandwidth limit, only a data rate limit (300 baud). The FCC has a proposal before it to set a bandwidth limit (RM-11708). I am hoping they adopt one much smaller than 2.4 kHz, for the reason below:

30m is 150 kHz wide, and one reason for no voice allowed on it is the size of the spectrum occupied by 2.4 kHz SSB signal. You would fill the band with 60 signals.. 80m has a 100 kHz wide data segment, and 40 2.4 kHz data signals will render it useless for anyone else. In my opinion, a better choice would be a 500 or 1000 Hz bandwidth, which would make the data segment hold about the same number of conversations as the 80m phone segment.
I would hope that any digital operator who had the choice of several modes, would opt for a narrower mode just to reduce the interference potential.

Speaking on the topic are their any agreements or band plans in place that say what modes you should use on what frequencies. Perhaps that is a gentlemans agreement as well. Its annoying when holding a digital net to have people come within a couple hundred Hz and tranmit either cw or rtty or some other mode. I would
assume it could perhaps effect our transmitting signal and degrade it depending on the amount of power being transmitted.

Rick

6504. Re: [paNBEMS] 80 Meter Flamp Practice Activity

I have always gone to the listed "band plans" for seeing what can be used where. Here are two of them which, for the most parts, coincide with each other.
http://www.hamuniverse.com/hfbandplan.html
http://www.arrl.org/band-plan

It is annoying to the ear to have another signal close to one of our digital nets but I have not found it degrades the Olivia 8/500 or MFSK-32 signals as long as there is a few Hertz between them. Even a CW signal in the middle of the net really doesn't hurt too much for good digital signals. Of course, there was a time when some station left their JF-65 station running in the middle of the 40 meter net.
That was a bit annoying.

The Indiana NBEMS Net shows up about 500 Hertz below the 1700 Center Frequency of the 80 meter net but both appear to be happily coexisting. KB3FXI made the prudent decision to move us up to 200 Hertz from the original 1500 Hertz to give them some room. After all they were using some of that spectrum when we showed up. The Gentlemanly way to do things.

Same with the RTTY stations during a RTTY contest. Move the net to a fairly clear frequency. Net members really need to understand how to "hunt" if necessary. Happens a lot on the HF traffic nets. It is nice to set for monitoring but we share the bands so someone may be there first. If they are then move.

If the signal that is close is bothering my ears I just turn down the audio to the speaker. I don't need to hear it since I can see the signals on the waterfall. As a newbie to being an NCS on the paNBEMS nets I used to strain my ears to try to hear the digital signal. My thought process kicked and finally said "what the heck are you doing?" It is a digital signal and you couldn't copy it by ear anyway. Its not CW. So turning down the audio makes for a better "listening experience" with the net. Let Fldigi do what it is best at and it will print the signals that it decodes. And if you're interested enough to see who the CW station is go hunt it down and let the net go. Might be something you need for an award.

As far as the CW signal, well, more than likely those stations are copying by ear which means they are having a harder time of it than Fldigi is. If the cw stations were there first shift the net frequency. If the cw stations show up after the net is in progress ignore them. They'll move eventually because the digital signals are certainly ruining their QSO. If they persist they are the ones that are not being Gentlemen, or Ladies as the case may be.

W.T.

I'm not sure if there is. Every time I run the il net CW, Rtty, all flock to our location. It is annoying, and does degrade the signal. What frustrates me is that every time we start, passband is entirely clear. Then some apparently see some activity and decide to get as close as possible to us. I'd be interested in any band plans as well. I didy best picking our frequency but can't remember seeing anything official

From: Dave Frazier wb0kgn
Topic: 6507 Message: 6507

I have heard that the faster the sound card sampling rate, the better able to print weak signals. So, I set FLdigi and my Creative Sound Blaster 2NX external sound card to 96000 . I have also heard that FLdigi runs best on "Native" which is I think 41000 (which the Sound Blaster does not support.

Also, the Sound Blaster gives me a choice of 16 or 24 bits.

The questions are...96000 or 48000? 16 bits or 24 bits?

41000 is out as I have learned that at least for some differences, having the Sound Blaster and FLdigi set at different sampling rates gives bad resuots at the faster modes (like 4xpsk125R).

Subject: [NY-NBEMS] VOA Radiogram, 17-18 January 2015

Hello friends,

Last week's news item in Olivia 32-2000 provided successful text decodes in some difficult reception conditions. This weekend, we will try a VOA News item in Olivia 16-2000. It's faster, about 76 wpm, but with only 16 tones, it might not be as robust. The Olivia 16-2000 mode requires a custom setting in FLdigi.

Here is the lineup for VOA Radiogram, program 94, 17-18 January 2015 -- all in MFSK32 except where noted:

1:42 Program preview
2:50 WikiHouse simplifies home construction*
7:22 Taiwan protests new Chinese air routes*
13:53 Facebook app provides Internet to Colombia*
20:18 Olivia 16-2000: Proposed cuts in methane emissions
25:07 Closing announcements*
28:09 Thor16: Bonus mode of the week
*with image

Please send reception reports to radiogram@...

VOA Radiogram transmission schedule
(all days and times UTC):
Sat 0930-1000 5910 kHz
Sat 1600-1630 17860 kHz
Sun 0230-0300 5745 kHz
Sun 1930-2000 15670 kHz
All via the Edward R. Murrow transmitting station in North Carolina.

The Mighty KBC will transmit a minute of MFSK64 Saturday at about 1230 UTC on 6095 kHz and Sunday at about 0130 UTC (Saturday 8:30 pm EST) on 7375 kHz. Both frequencies are via Germany. Reports to Eric: themightykbc@...

At voaradiogram.net, check out this very nice homebrew tube (valve) receiver (http://voaradiogram.net/post/108263859997/voa-radiogram-received-decoded-from-a-tube) used by Klaus in Germany to receive VOA Radiogram.

Thanks for the reception reports from last weekend, which I will begin answering now.

Subject: [NY-NBEMS] VOA Radiogram, 17-18 January 2015

Hello friends,

Last week's news item in Olivia 32-2000 provided successful text decodes in
some difficult reception conditions. This weekend, we will try a VOA News
item in Olivia 16-2000. It's faster, about 76 wpm, but with only 16 tones,
it might not be as robust. The Olivia 16-2000 mode requires a custom setting
in FLdigi.

Here is the lineup for VOA Radiogram, program 94, 17-18 January 2015 -- all
in MFSK32 except where noted:

1:42 Program preview
2:50 WikiHouse simplifies home construction*
7:22 Taiwan protests new Chinese air routes*
13:53 Facebook app provides Internet to Colombia*
20:18 Olivia 16-2000: Proposed cuts in methane emissions
25:07 Closing announcements*
28:09 Thor16: Bonus mode of the week
*with image

Please send reception reports to radiogram@...
<mailto:radiogram@...>

VOA Radiogram transmission schedule
(all days and times UTC):
Sat 0930-1000 5910 kHz
Sat 1600-1630 17860 kHz

Sun 0230-0300 5745 kHz
Sun 1930-2000 15670 kHz
All via the Edward R. Murrow transmitting station in North Carolina.

The Mighty KBC will transmit a minute of MFSK64 Saturday at about 1230 UTC
on 6095 kHz and Sunday at about 0130 UTC (Saturday 8:30 pm EST) on 7375 kHz.
Both frequencies are via Germany. Reports to Eric: themightykbc@...
<mailto:themightykbc@...>

At voaradiogram.net, check out this very nice homebrew tube (valve) receiver
(http://voaradiogram.net/post/108263859997/voa-radiogram-received-decoded-fr
om-a-tube)
used by Klaus in Germany to receive VOA Radiogram.

Thanks for the reception reports from last weekend, which I will begin
answering now.

Kim

Mike,
In FLDIGI, click on "OpMode", then arrow down on Olivia then arrow over and down to click on "Custom".
In the window that opens, you will see a few drop down boxes where you can manually select the bandwidth and tones. Once you make the manual changes, click save then close.

Mike,

In FLDIGI, click on "OpMode", then arrow down on Olivia then arrow over and down to click on "Custom".

In the window that opens, you will see a few drop down boxes where you can manually select the bandwidth and tones. Once you make the manual changes, click save then close.

paNBEMS Bulletin/Liaison Net tonight (Sunday) at 7:30pm ET on 3.583 USB, 1500 Hz center waterfall.
Net call starts in mode Olivia 8/500 and we usually switch to MFSK-32 for the FLAMP bulletin.
-Dave, KB3FXIpaNBEMS Founder

From: David Kleber
Topic: 6512 Message: 6513

A few additional notes.
The paNBEMS spots are always +/- 500 Hz so we can avoid interference when necessary.
 INARES usually runs just 500 Hz below the paNBEMS 80m spot, so we usually operate the Bulletin net at 3.583 USB, 1700 Hz center waterfall.
All stations should have FLDIGI and FLAMP open and running and FLDIGI should have RxID (RSID) enabled.

6514. Nightly SGARN HF Multicasts

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-01-23 18:10:33 UTC
From: Charles Brabham
Topic: 6514 Message: 6514

SGARN Hamcasts:

The Second Generation Amateur Radio Network (SGARN) transmits bulletins nightly via Amateur Multicast Protocol (AMP).

10.142 Mhz USB +1000

Bulletins are sent on this frequency, in this digital mode (MT63-500L) from 0200-1100 UTC every night.

It is recommended that you tune in to the multicast and let your system listen over-night for best results.

Typical File List:

SGARN.txt - Second Generation Amateur Radio Network Info Text
B.txt - ARRL ARLB Bulletin
D.txt - ARRL ARLD DX Bulletin
EMCOM.txt - Active NBEMS Net data
SGARN.htm - Second Generation Amateur Radio Network Info HTML
K.txt - ARRL ARLK Keps Bulletin
P.txt - ARRL ARLP Propagation Bulletin
SGARN2.txt - Second Generation Amateur Radio Network Info Text
nbems-nets.txt - NBEMS Practice Net Schedules
S.txt - ARRL ARLS Space Bulletin
W1AW.txt - W1AW Schedule Information
X.txt - ARRL ARLX Extra Bulletin

Guide for receiving SGARN multicasts: (Software, etc.)

Hello all,
Since I have a rare Saturday off work, I'll be monitoring and hopefully checking in on the 20m SATERN net today at 1pm ET.
And, I'll be hanging around on 14.065, 1000 Hz center waterfall today until about 4pm ET.
Perhaps we could do some testing of FLMSG and FLAMP today up on 20m?
I'll be monitoring and putting out some calls.

6516. Procedural Question on Resends/Relays

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-01-25 20:27:39 UTC
From: mdannhardt@...
Topic: 6516 Message: 6516

Hi.
Checked into the Net today and copied all FLAmp and FLMsg data 100% with the exception of a FLMsg from I think WN3LIF. It contained a checksum error and some obviously garbled text yet for the most part readable by ignoring checksum errors.

My question is, when NCS calls for relays or resends what would be the recommended sequence/reply I should use to get the file resent?

I've not heard anyone ask for a relay or resend in the handful of times I've been lurking and listening. I was tempted to ask for a resend just to stir up some practice hihi.

With FLAmp block resends and relays are covered nicely so I know how that works.

Thanks for the education your organization is providing.

Mike

6517. FLMsg Port Error

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-01-25 20:35:05 UTC
From: mdannhardt@...
Topic: 6517 Message: 6517

Hi.

I've asked this question before, both here and on the fldigi_win forum but haven't receive an explanation yet so I thought I would try again.

I left my FLDigi suite and rig running unattended (I had to run out) and when I returned later in the day I had several popup messages indicating that there was an error opening port 8080 (I unfortunately didn't write down the exact message).

I think this is related to the FLMsg configuration under the Socket tab where the "Web Server Port" is configured. Right now I have a Web Server Addr of 127.0.0.1 (local host) and a port of 8080. I don't know what these are for. Are they to look up forms from a web server? I am not running a web server on my computer or in my shack.

Am I right that this might related to the error I am getting? What are others entering? I looked at the latest FLMsg documentation and these entries are not covered (or I can't find them).

Thanks,
Mike

Mike,
Thanks for the excellent question. I wish more folks jumped in here with questions like yours.
For an FLSMG message, we have no choice but to call for a resend of the entire message. As NCS, if you called for a resend and you were very weak to my station, I might call for another station to relay who has a better copy on the relay request station.
For a fill request on FLAMP, you click "Report" in FLAMP which sends the information report into your FLDIGI transmit text box which you can then transmit to the origination broadcast station, whereby that station receives your block fill requests and sends only those blocks. It's up to the originating station on the FLAMP transmission as to whether they send just one repeat or several repeats (based on the conditions). Also, other stations can certain relay the FLAMP blocks to the fill request stations.

Dave,

Well thank you for the comment and response.

Another follow on if I may.

I'd assume that in a real life situation, a radio gram or what not received via FLDigi/FLMsg should not be considered reliable information if received with checksum errors. I mean if I received a radiogram and ignored checksum errors and read it, it might SEEM OK but in fact if might be critically erred. Passing such a message on to emergency personel I would think should be done with caution if at all right? "Victim at 1234 SE Maple St" might actually be "Victim as 1234 NE Maple St". A Redcross form reading "Administer 500cc of blabla" might actually be "Administer 100cc of blabla".

I think FLAmp is less of a concern in this regard since all blocks need to be received error free in order to reconstruct the file. But I might be mistaken.

FWIW.

Mike

Correct, Mike.
If you get a checksum error on an FLMSG, ask for a resend. Even if it's just a routine casual message, we should be sending and receiving accurate data. That is, of course, one of the best reasons why we can depend on the digital modes and protocols such as FLMSG and FLAMP.

de kb3fxi@... 25, 20151800 ET
The state EOC is on activation for the storm starting 20:00 ET Sunday and running till Wednesday morning as needed. State digital network is active. Please monitor all state frequencies.
The state EOC will be staffed for the activation. I will keep you all posted as events unfold. Please be careful and travel safe! Cynthia A Garfold- KB3LZN, AUXCOM
####
PEMA/ACS has been activated for the current Winter Weather Event expected to run from the evening of Sunday January 25 through the morning of Wednesday January 27, 2015.
paNBEMS stations are requested to monitor our standard frequencies of 7.0725 USB daytime (8am-6pm ET) and evenings on 3.583 USB (6pm-8am ET). Both digital spots are conducted on 1500 Hz center waterfall (+/- 500 Hz) with mode Olivia 8/500 as the standard call mode and MFSK-32 as the primary mode for FLMSG and FLAMP bulletin file broadcasts.
Stations with situation reports, weather reports and formal traffic should use FLMSG or FLAMP whenever possible. Please use the FLMSG Weather/Storm Report for weather observation reports.
- Dave Kleber, KB3FXIPEMA/ACS Digital Manager

Time to get your HF digital mode equipment warmed up.

This notice (below) is posted from WPA, but it does indicate a statewide activation of the PEMA EOC and PEMA/ACS.

Note that we in Franklin County RACES/ACS have NOT been activated at this time.

Skywarn net activation is at the behest of Mike Rider KB3EHT. I suspect that he will open the net if the weather conditions warrant.

But you are encouraged to listen in, and if you feel it appropriate, to contribute weather reports directly to the PEMA digital frequencies.

Daniel,
The message was a forward from KB3LZN, the PEMA/ACS Manager.
This is a statewide activation.

The state EOC is on activation for the storm starting 20:00 ET Sunday and running till Wednesday morning as needed. State digital network is active. Please monitor all state frequencies.
The state EOC will be staffed for the activation. I will keep you all posted as events unfold. Please be careful and travel safe!   Cynthia A Garfold- KB3LZN, AUXCOM
####
PEMA/ACS has been activated for the current Winter Weather Event expected to run from the evening of Sunday January 25 through the morning of Wednesday January 27, 2015.
paNBEMS stations are requested to monitor our standard frequencies of 7.0725 USB daytime (8am-6pm ET) and evenings on 3.583 USB (6pm-8am ET). Both digital spots are conducted on 1500 Hz center waterfall (+/- 500 Hz) with mode Olivia 8/500 as the standard call mode and MFSK-32 as the primary mode for FLMSG and FLAMP bulletin file broadcasts.
Stations with situation reports, weather reports and formal traffic should use FLMSG or FLAMP whenever possible. Please use the FLMSG Weather/Storm Report for weather observation

reports.

If they don't transmit RSID, you just have to go by sight/sound.
http://w1hkj.com/FldigiHelp-3.21/Modes/index.htm

On the paNBEMS nets, we always use RSID when we change modes.

i'll ask the same thing as to what local time the chart uses, but I'll skip the sarcasm. Just want to know so I can update my own list -- some of these nets aren't on my current one.

Local to my qth which is in Pittsburgh PA

EST Time Zone

The reason I did not use UTC was due to is person preference.

Mike

I tuned into the NY Digital net today.

For some reason I had to go to 7.040.00

I had to fine the signal at 2500 WF

But in the copy read panel it was this

Message / Bulletins will now follow.

All stations switch to MFSK32 (=120 WPM)

NCS will send 15 second 1500 Hz marker tone.

Tune VFO to line up marker tone to 1500 Hz waterfall.

NCS will direct any traffic, followed by weekly bulletin.

I am copy the net 100 % but not sure of the freq and wf differences.

Mike- N3BSQ

Mike,
Perhaps your radio was not set to USB mode?
NCS was at 7036 +1488Hz on my end.

6544. N4PY and FLdigi

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-01-31 23:59:45 UTC
From: kb3fn@...
Topic: 6544 Message: 6544

Has anyone configered N4PY and NBEMS FLdigi together.
I am running a Icom IC-7100 and would like to use N4PY to interface with FLdigi.
Any help would be great.
Lynn - KB3FN

6545. fldigi 3.22.05 Crashing flrig 1.3.19 (Mac)

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-02-01 02:23:09 UTC
From: yahoo@...
Topic: 6545 Message: 6545

Anyone experiencing flrig crashing when brought up with fldigi? If I launch fldigi, then bring up flrig, flrig will crash. If I lauinch flrig, it will launch just fine until I launch fldigi and at that time it will then crash.

These are running on OS X Yosemite.

Thanks,
Eric, W7CSD

Mike,
Thanks for the Excel sheet, it will be handy. I have a couple of
questions on your sheet though.

Is the day of the week the UTC day or the local day?

How does it handle nets that are "Local" time nets, meaning the net time
does not change with with DST? Ex:NET is 11AM EST in Winter and 11 AM
EDT Summer.

I originally got the list for a fellow who help me with my setup. Since we are both on the East Coast in EST/EDT I did it via that.

So the list you have is set up as living in on the east coast in Eastern Time Zon.

I'd like to have it in some kind of text format, RTF for example that
you can easily view on just about any platform.

The percentage of hams who know their way around a spreadsheet program
is relatively small. Might as well offer it in Swahili.

Being able to get from a CSV to a spread sheet and vica versa is a needed emcomm skill. One of the nets is a good place to ask for help with this if it is a problem. Dave in Mn ----- Original Message ----- From: "Charles Brabham n5pvl@... [paNBEMS]" To: paNBEMS@yahoogroups.com Sent: Monday, February 2, 2015 1:57:43 PM Subject: Re: [paNBEMS] Re: Updated list of NBEMS Nets,-- I'd like to have it in some kind of text format, RTF for example that you can easily view on just about any platform. The percentage of hams who know their way around a spreadsheet program is relatively small. Might as well offer it in Swahili. 73 DE Charles, N5PVL On 2/2/2015 1:48 PM, 'Michael A. Topic: 6555 Message: 6565

The original post was something I just happened to build on. I did not think there would be so much interest in this. I got the information form the forum and I originally got the information from a fellow ham.

If someone want to keep the sheet updated on a website that would be the most logical place to have it instead of all these different format.

The spreadsheet is for any timezone. Adjust the timezone offset for your location, the field to adjust is located near the bottom.
As for the Week Day column, I didn't give that a thought when adding the formulas. They are fixed entries for eastern time.

All,

I downloaded the spreadsheet, adjusted for my timezone and then saved. I also printed the spreadsheet in HTML format. I uploaded these two files under the Files link.
PA NBEMS Working Group https://groups.yahoo.com/neo/groups/paNBEMS/files/NBEMS%20Nets/

I hope I've not stepped on any toes doing so. Please advise me in an email and I'll removed them.

I do think working with the various standard file formats is a necessary skill but hopefully the HTML will give a quick way to view the latest net info.

As far as I can tell, anyone should be able to edit the files to keep them up to date or corrected.

Kind regards to all,
Mike / KA4CDN

Assumption conditions-
Using a VHF repeater with a timer-
Properly set Tx/Rx Interval in FLAMP configure for the repeater timer.

If an emcomm message is being sent, (say with a send time of 7 minutes) and during one of the 2 minute breaks in sending another station breaks in with a voice call and takes the repeater. Is there a good way to pause FLAMP or Fldigi from transmitting until the voice call is complete without loosing what has been sent and having to re-send the whole thing again? Thank you guys-

I would tinker with the fldigi squelch settings, being sure first of all that the squelch is activated.

The radio squelch in combination with the fldigi squelch should do this for you.

Nice thing about FLamp is that if the receiving station is missing blocks, the problem could be solved by requesting fills for the missing blocks.

Jim,

Sound like a good idea, will see about adding it to the list of things to do. Although it may not be included in the next release. The next release will be primarily bug fixes.

Current short list of new feature request.

Charles: Load script file with name x at event time.
Jim: Transmit pause
I: Localization

Please lets review the situation-
A csv file opens in Excel or the free LibreOffice as a Table. All spreadsheet logic and equations are lost in the conversion to csv. I understand why it is liked, I understand what it is and why it is valuable. I am upset when we use the wrong word to describe it, and that fact could come back and bite us. Lets call the function csv table or develop a Table Form for this purpose.
The problem that I see is that the involved agency might use spreadsheets. This might be for damage assessment estimate, to compute medical dosage, or to calculate supplies required. Great confusion could ensue and the hams involved could be seen as simpletons or worse if the agency thought that a real spreadsheet could be sent by radio and then discover that only a table survived radio transmission.
(I worked many years in standards development and am sensitive to the accurate use of words and names.)
regards, cullen K5HAL

In general:

The more skills your volunteers must pick up in order to participate,
the less volunteers you will have to work with.

As the emcom community becomes more "highly trained" and specialized,
the overall quality of your participants will also tend to fall. -
Plenty of authoritarians, followers and butt-kissers, very few who can
think creatively or respond well when things do not go as planned.

Things rarely if ever go as planned, in a real emergency.

Just a question. For those trying to send an Excel file. Can you not utilize flwrap, wrap the excel file, send with flamp. When sent like this there is no need to save as a CSV file and send. You will keep the file as is, no loss of any special formatting in the document.

Or am I just confused with what is being attempted.

Glenn

I am no expert on spreadsheet operation, but my guess is that the files
are converted to CSV format in order to reduce the size of the file to
be transmitted.

I know that with word-processor files, converting to plain text format
will reduce the file size dramatically.

Anyway, that's my guess. It may be that CSV format is usable by more
programs, or something like that.

For my purposes, HTML format is vastly superior to any spreadsheet
format, as it can be read on any system, even Android tablets, possibly
even on cell-phones, etc..

While a small Excel (XLS) spreadsheet may be 30kb, the CSV would be 1kb.
The CSV file is actually a text file that can be read with WordPad, etc.
Plain text as a CSV, or a TXT derived from a Word (DOC) file, is much smaller
and therefore much faster to transmit. An HTML file is also a text file,
but includes alot more data that are the formatting codes to be read by any
browser.

I understand that it is a smaller file, however, the questions I have been reading are about saving the formulas from Excell files. These are not saved in the CSV files. If these values are important to keep then the extra time required to send may be necessary. Just trying to discover a way for those in need to do what they need to do. I suppose one could simply make manual calculations and I'm put into the Excel spreadsheet and then make CSV.

I'm new to this NBEMS so I may be off base but I thought that part of the job NBEMS is suppose to be to transport data files on behalf of emergency agencies (using FLAMP). I would think that we would not care what the file type is, what its contents are or its purpose. Further I would think we should not be altering the files in anyway; not changing the names and especially not the contents. We get the file, transmit/receive the file and then deliver the file unaltered to the intended receiptant(s). FLAMP ensures the accuracy of the transported file via checksums.

If an agency wants a spreadsheet file transported than that is what should be transported. And that should be practiced.

Files types used amongst the group for things like listing of net schedules is a different issue altogether. I'd think we'd be free to use whatever format we want or multiple formats if it gets more folks involve. (Although with multiple files and formats for the same data there is always the issue of keeping them in synch and son in general a single source is easier and less prone to inconsistences).

Spreadsheets have been around a long time and there are many software applications that can use the same data files, from Excel to several open source office suites, for use on just about any operating system or smart device. A basic understanding of using them should be skill participating in emergency response should have.

I posted something similar to the above yesterday - I thought - but don't see it anywhere. My apologies if I've double posted, got too long winded or am just out to lunch.

Kind Regards,
Mike / KA4CDN

I am thinking that the issue is transmission length. You can send ml on files of any type however the transmissions will become quite lengthy. Has anyone thought about utilizing winlink for sending forms. Anything can be sent utilizing this program as an email attachment. Can send as a regular email or directly to another.

Just food for thought if you don't have to use only fldigi.

Have you looked at the forms flmsg offers? ?

We have used it for ICS 213

Short lists put into spreadsheets sent

What distances are you looking at?

We are looking at hops from local to county EOCs covered by VHF

We are also looking at SSTV for custom forms that are not covered in
fLMSG

Win link may be more practical for higher traffic links from county to state EOC, but
FLDIgI also there. ?

I am in south central PA

I am in York county. Winlink can be used in short range traffic just as any other digital modes. The mode is used on all bands but 160 meters I believe unless it is used there as well.

I have not looked into them all. Was just throwing an option out there for issues with forms with special fields which are lost when the file type is modified.

?

I have not looked into them all.? Was just throwing an option out there for issues with forms with special fields which are lost when the file type is modified.

On Feb 5, 2015 7:20 AM, "mpgutekunst@comcast.net [paNBEMS]" <paNBEMS@yahoogroups.com> wrote:

?

Have you looked at the forms flmsg offers? ?

We have used it for ICS 213

Short lists put into spreadsheets sent

What distances are you looking at?

We are looking at hops from local to county EOCs covered by VHF

We are also looking at SSTV for custom forms that are not covered in fLMSG

Win link may be more practical for higher traffic links from county to state EOC, but FLDIgI also there. ?

I am in south central PA

I could probably send my EMD an HTML file - once. After which he would kick me out of the EMCOMM process so fast that I might not have time to shut down my computer.

The EOC and other "customers" (e.g., Red Cross) need computer readable data that they can work with and put into their systems. They don't need to view it on phones or tablets, they need to be able to work with it.

It's very difficult to extract data from HTML and if you send an HTML file you will inflate the size of the file you're sending.

An Excel file is going to be big because of all the overhead, even if it doesn't have any macros or programming because there's all sorts of overhead in an Excel file. For example, an Excel file will usually have previous versions of the data contained within the file.

CSV strips out all of that and sends a small, compact file of just data that can then be easily imported back into Excel or other systems at the EOC.

Most of the time, programming, macros, selector drop-downs, etc. are there for controlling/validating/assisting user input and aren't needed when the data gets back to the EOC, so there's no problem in just sending a CSV. If the programming, macros, selector drop-downs, etc. are needed back at the EOC, it's very easy to work out procedures to send out CSVs from the field to the EOC and then have the people at the EOC bring the data back into a spreadsheet that has all the programming, macros, selector drop-downs, etc. It doesn't take a lot of programming knowledge to be able to set that up, and takes no programming knowledge to use it.

I should also point out that you almost never want to use the programming, macros, selector drop-downs, etc. that come in from the field because there's a good chance that they're not operating on the most current version of the programming, macros, selector drop-downs, etc.

How do you know if the EOC needs the programming, macros, selector drop-downs, etc.? Ummm, you ask. You talk to the people you serve and work out the procedures. We've taken spreadsheets that were as much as 100K and worked out procedures so that we're sending only 1-2K of data. One of our hams supervised the programming work, which was done by two high school kids as a class project. We had at least 10 hams in the club capable of doing the work and there are probably 20 people over in City Hall who could have done the work.

Much of the discussion here has been done before. It comes down to the tools we have to do the job with the limitations of our communcations network. Over RF, we have restrictions on bandwidth and symbol rates, and those don't change based on the data that might 'want' to be sent by a served agency.

We tell our served agencies what we are capable of doing, and it is then their decision how they might adjust on their side to leverage what we can do.

FL suite will get the job done for a number of different file types and RF methods. It comes down to understanding the sense of urgency on the information to deliver, and figuring out how to make it happen.

Taking 10 mins (contrived example) to tie up an RF channel to transfer a file in native format might be okay in some situations. But the loss of that RF channel for that amount of time could have serious impact in another situation.

WinLink can do some of the file transfers, but based on other comments in this and other forums, it requires its own infrastructure and skillset to utilize. I can attest to the fact that the FL suite can be setup and taught to a novice NBEMS user in a matter of a few minutes. I had the chance to do this during last year's ice storm when our ARES group was supporting a shelter over multiple days. Getting operators for many shifts over many days drains local resources who might be trained. Getting an operator who has time to spare and support the mission, but who is unfamiliar with NBEMS, is not a barrier given the ease of setup and use.

We tend to all think absolute worst case communications at all times in some of these types of discussions. But as I was reminded during the EC001 course, there are other alternatives like fax machines, hand carry, etc that may get easily overlooked by focusing only on what we can do via RF.

If an agency wants a spreadsheet file transported than that is what should be transported. And that should be practiced.

Files types used amongst the group for things like listing of net schedules is a different issue altogether. I'd think we'd be free to use whatever format we want or multiple formats if it gets more folks involve. (Although with multiple files and formats for the same data there is always the issue of keeping them in synch and son in general a single source is easier and less prone to inconsistences).

Spreadsheets have been around a long time and there are many software applications that can use the same data files, from Excel to several open source office suites, for use on just about any operating system or smart device. A basic understanding of using them should be skill participating in emergency response should have.

I posted something similar to the above yesterday - I thought - but don't see it anywhere. My apologies if I've double posted, got too long winded or am just out to lunch.

Kind Regards,
Mike / KA4CDN

It is basically an email program all files pass through.

I agree enough said I will continue to read messages may not post.

From: Lloyd Craft
Topic: 6555 Message: 6599

Isn’t all we are doing is sending the served agency’s information via a flat file data base? The spread sheet is only needed to display the information in tabular (columns and rows) so that it can be composed and displayed or printed. This information has urgency regarding time and place.

While I can only speak of participating in drills, the operator would not have time to work on a complex spread sheet. While he is preparing one message, two or three more may have come in demanding his attention.

If the agency gives the operator a written form, transcription to the computer should be straight forward providing that it is properly filled out. If they send a computer file such as a Word or Excel file in the appropriate form would it not still be required to transcribe it to the corresponding flmsg form. Or, are we talking of another form of transmitting whole files.

I thought the purpose on NBEMS was to simplify to the most reliable form of communication? By sending other than text, we are transmitting a lot of unnecessary data that slow communications down and ties up the frequency.

I agree with you, Lloyd. NBEMS is, or at least should be all about the
KISS (Keep It Simple Stupid) principle.

Additional slowdowns, complication and needless data are the last thing
anybody needs in the course of an emergency.

Word Doc.s are easy to cut and paste.. We did this for IMT Exercise, copy, paste into Notepad (strips out special Word control characters) and copy fromNotepad into FLMSG text area, Yes you need to fill in the To/From info. but it works and doesn't take all that long. EXCEL files need to go thru FLAMP, yes changing to CSV cuts out fomulas etc, but just need to tell your client that you can't send files with formulas etc. You can send full EXCEL files they just take a lot of time and probably aren't going to do it viz repeaters. Yes I said repeaters because 95 percent or high of all traiffic sent these days is fairly local, not a lot of HF stuff. Practice this stuff not that hard.

VHF NBEMS would be difficult to implement in this area. - A mountainous high desert where mountaintop repeaters are almost exclusively powered by solar/battery systems that cannot support continuous or long-term use very well at all.

Here it is NVIS HF for digital - or nothing.

From: David Kleber
Topic: 6555 Message: 6604

W1HKJ highly recommends using WordPad for editing and saving as plain text. Apparently, Notepad does some Microsoft Magic and causes some odd character translations that don't play well with the checksum calculations in FLMSG and FLAMP when sending uncompressed. Compression seems to always resolve any of these issues and for this reason, on the paNBEMS Bulletin/Liaison net, we send the FLAMP transmission compressed.

While I can only speak of participating in drills, the operator would not have time to work on a complex spread sheet. While he is preparing one message, two or three more may have come in demanding his attention.

If the agency gives the operator a written form, transcription to the computer should be straight forward providing that it is properly filled out. If they send a computer file such as a Word or Excel file in the appropriate form would it not still be required to transcribe it to the corresponding flmsg form. Or, are we talking of another form of transmitting whole files.

I thought the purpose on NBEMS was to simplify to the most reliable form of communication? By sending other than text, we are transmitting a lot of unnecessary data that slow communications down and ties up the frequency.

I would think that we would not care what the file type is, what its contents are or its purpose. Further I would think we should not be altering the files in anyway; not changing the names and especially not the contents. We get the file, transmit/receive the file and then deliver the file unaltered to the intended receiptant(s). FLAMP ensures the accuracy of the transported file via checksums.

different issue altogether. I'd think we'd be free to use whatever format we want or multiple formats if it gets more folks involve. (Although with multiple files and formats for the same data there is always the issue of keeping them in synch and son in general a single source is easier and less prone to inconsistences).

The problem that I encountered with using Notepad with text files intended
for FLdigi or Linux (like my JNOS BBS), is that the CR at the end of a line
is replaced with a ^M instead.

>>Isn’t all we are doing is sending the served agency’s information via a flat file data base?

We're sending what they want sent (as best we can if we can). In many cases what they want sent is a spreadsheet or word processing document because it is a specific form and they have back-end processes that expect to receive that spreadsheet or wp document.

>>This information has urgency regarding time and place.

The information we would be sending by NBEMS is rarely "urgent urgent urgent gotta get it on the air right now this instant or someone's gonna die" type stuff. That kind of tactical info would almost undoubtedly be sent by voice.

What we are sending is usually more strategic info that has taken a bit of time to put together such as status reports (e.g., shelter population status), logistics requirements (e.g., food, medicine, tents, cots, bulldozers needed), logistics delivery notices (e.g., what's coming, when it's coming, and where it's coming to). It's time sensitive but not time critical.

>>the operator would not have time to work on a complex spread sheet

The radio op would not be working on a complex spreadsheet. That's the job of the served agency people. The radio op's job is to transmit/receive that spreadsheet (or CSV or whatever).

>>If they send a computer file such as a Word or Excel file in the appropriate form would it not still be required to transcribe it to the corresponding flmsg form

Generally no. If they've prepared a spreadsheet or Word document, chances are that they want that file transmitted because they have a back-end process that is expecting a file in that format.

Practice and coordination with the served agency will determine what needs to be sent how - and the most efficient way of sending things. All too many local ARES groups practice in a vacuum - they don't work with the served agencies and are practicing what they think they might need to do - which is rarly what they are called upon to do in real-life.

>>By sending other than text, we are transmitting a lot of unnecessary data

In general, NBEMS is not capable of sending anything other than text - which is one of the reasons why Excel files need to be converted into CSV to be sent (CSV is a text-only format). The question is whether or not converting the file into text will screw them up on the other end.

And before anybody says it, yes there is a way to send non-text files, but it will dramatically increase the size of the file. So if you start with an already big Excel file and then dramatically increase the size of that file, then you sure are tying up the airwaves for no reason.

Technical it is not a matter of correct or incorrect, it is just different.

DOS and Windows programs in general have marked the end of a line (EOL) of ASCII text with a carriage return, CR, and line feed, LF ("\r\n"). In UNIX (and Linux) end of ASCII text lines just use line feed, LF ("\n").

Some editors are more tolerant of both line endings, some are more picky. Some allow you to select the type of endings you want and to convert from one to the other (Notepad++ is one such nice editor, there are many).

I think the FL suite, coming from the Linux world, prefers the Linux (\n) end of line and Notepad can not accommodate that. I believe it is only an issue with the configuration files if you were to try and edit them yourself by hand. Either EOL should work in files sent by FLAMP or interfere with compression algorithms at all. So if someone gave you a file created with Notepad and ask it to be sent, there would be no need to edit it for EOL changes.

Hi Jon,

I am aware of the difference between emergency, priority and routine traffic and also the difference between formal and tactical traffic. Which agencies are you referring to that require word docs and spreadsheets? My experience in drills with the Red Cross, SkyWarn, NDMS and active SkyWarn nets is that there is no need to send such files over amateur frequencies. Although my perspective is from a phone net NCS. Does your local EMA require such?

Our Section Emergency Coordinator sends the ICS 205 via email prior to a drill. This document would probably exist prior to deployment. If, for any reason, the operator doesn't have it, the information could be sent by the ICS 213 which is preferred in our Section. The ICS 309 is kept by the NCS operator. There shouldn't be any reason to send them anywhere during the incident.

I don't use a spread sheet while running the net because my thought processes and fingers are too slow. Although there are EmComm programs for logging, it shouldn't be necessary to send those logs during the incident. Our forms are all filled in by hand and kept for a matter of record and retrieved when needed. Even our scrap paper is saved. All of those forms that you mentioned should be easily handled by NBEMS.

As long as the communication is intra-agency, they can export from and import to the same template. If it is inter-agency that's another matter. With old and new versions of MS Office, compatibility problems may arise. And there could be agencies that use Open Office or Office Libre. Others may use PDF files as their standard document type. The simplicity of NBEMS in not a problem but an advantage, however it does take practice to use. That's why ARES holds drills and works with what the served agencies are willing to provide. 73

Jim,

I did some experimenting with this but all I have gotten is frustrated. The concept is good but there is something about the last line in the Flamp transmission that doesn't quite fly.

What I did was used the concept that I used with Flmsg. That was to take the output of Flwrap and put it in a file and send it via the <FILE> macro tag. That works perfectly and thanks to the group for that suggestion.

I tried the same concept with Flamp. Run an flamp transmission through fldigi and capture the text output that appears in the receive window. Put it in a file and play file with the Flamp transmission back through Fldigi.

The first thing that I found was that line wraps caused problems so I shorted the block length to 64 to eliminate the line wraps in the window.

That worked just fine until that last block was sent. For some reason the last block will not make it through. This last block is the sticker:
<DATA 43 35D8>{844B:101}k2XGKt9Dk2oRXZa93v7aNLk
[b64:end]

I would imagine there is something in the string that has a character that starts on a new line that comes directly from Flamp that I can't capture properly.

The ideal method would be to have Flamp redirect its output to a file that can be sent with the File Macro tag.

So that is what I found. I'd like to be able to send an Flamp transmission the same way I send the Flmsg output. Without the help of the Developers I don't think that will happen.

Of course you can always send the entire transmission via Flamp.

If you come up with something please post it here.

Regards,

W.T.

>>Which agencies are you referring to that require word docs and spreadsheets?

Where I am there are a couple of key spreadsheets involved in shelter operations - they're prepared at the shelters and then get consolidated as they move up the chain. They're used by both Red Cross (which operates the shelters) and the municipalities (which are responsible for the shelters). Examples include:

o shelter population (people in the shelters broken down in all sorts of levels of detail such as total population, number of families, number of single males, number of single females, number of children, number of pets, expected departures in the next 24 hours, expected additions in the next 24 hours)
o shelter consumables (food, water and other consumable supplies on hand, consumed)
o shelter logistics requirements for the next 24, 48, and 72 hours
o shelter consumables received (from whom, when, and how much so that the vendors can be reimbursed)
o timesheets (vitally important in obtaining reimbursement from the state and from FEMA). This is an especially complex spreadsheet without lots of macros because of all the arcane rules about reimbursement but getting the info entered immediately on the spot makes a big difference in how much money the municipalities are eventually able to get reimbursed

The state has its own systems for managing logistics that will be supplied by the state (e.g., medicine from state stockpiles, tents, blankets, heavy equipment), but they've built it so that they are prepared to accept CSV files (in very specific formats) in recognition of the fact that the municipalities will be building up their requirements on spreadsheets.

The data is collected in spreadsheets as close to the source as possible and then summarized as it moves up the line because it is more accurate, more reliable (versus voice), and more efficient.

>>My experience in drills with the Red Cross, SkyWarn, NDMS and active SkyWarn nets is that there is no need to send such files over amateur frequencies.

Skywarn is an interesting situation. They've been getting away with voice for years but there are already twice as many reporters providing NWS with direct electronic entry as there are hams using voice. The new mPing application is going to greatly increase the number of electronic reporters. With budget cuts reducing the number of people at NWS stations who can take and process voice reports, there's going to be increasing pressure to get Skywarn on electronic entry.

Yes, yes, I know -- what if cell phones and internet go down? The info critical for saving lives is being collected before and as storms hit when internet and cell phones are still operational. By the time internet and cell phones are down, the info that's being collected is for NWS research and validation and is not as time sensitive. Plus, if Skywarn sends electronic data such as CSV files, then it doesn't matter if cell phones and internet are down.

I haven't worked with NDMS, but I have to believe that there's an awful lot of data that needs to be communicated in terms of numbers, logistics requirements, transportation requirements, etc. - all of which is going to be collected locally in spreadsheets and might as well be sent in spreadsheets if we can.

>>Our Section Emergency Coordinator sends the ICS 205 via email prior to a drill. This document would probably exist prior to deployment. If, for any reason, the operator doesn’t have it, the information could be sent by the ICS 213 which is preferred in our Section. The ICS 309 is kept by the NCS operator. There shouldn’t be any reason to send them anywhere during the incident.

The stuff related to comms (like the data in the ICS-205) is not what we're talking about. It's the needed by emergency managers to respond to the emergencies. Around here every spreadsheet sent is considered an ICS-213 and the data is considered part of block 7. Note that it is common for states to customize the ICS forms to their own needs - there is no legal requirement anywhere to maintain the forms in the exact formats shown on the FEMA website. The State of Vermont, for example, has what they call VCS forms (I think they've recently renamed them yet again) that are Vermont specific variations on the ICS forms.

>>I don’t use a spread sheet while running the net because my thought processes and fingers are too slow.

Like I said, the radio ops are not expected to be doing spreadsheets. That's for Red Cross, municipality people, other NGOs, etc. providing the information needed by emergency operations.

>>As long as the communication is intra-agency, they can export from and import to the same template. If it is inter-agency that’s another matter. With old and new versions of MS Office, compatibility problems may arise.

In our area, that's been standardized across agencies. The state expects the municipalities to provide data in certain formats. The municipalities expect to receive data in certain formats from their people and the NGOs. How you get it into those formats is your problem, just make sure you're getting it to them as required. By converting the spreadsheets to CSV (or tab delimited) for transmission, there's no issue as to Excel versus Libre Office versus whatever, there's no issue as to old versus new versions, and there's no issue in sending bloated files.

I'm new to PA ARES (I used to be in ARES in TX), and have recently got my station working again after a little over a year off the air due to the move.

This morning (Sunday 2/8) I tried to participate (or at least monitor) a net I found on a list downloaded from here. It was supposed to be Sunday at 1000 local, on 7.0725, Olivia 8/500, CF 1500. I think I had everything set up correctly but monitored nothing.

Did the net take place and I just couldn't pick up anything? Is the list incorrect?

Thanks.

As anyone who has visited sgarn.org can testify, I tend to a minimalist approach for HTML documents.

The HTML version of the NBEMS List generated by the spreadsheet program showed to be 27kb on my system, unnecessarily large in my opinion for transmission over HF.

So, I created a minimalist version of the list and, after taking the liberty of adding the SGARN nightly multicast to the end, it wound up being 3kb.

Spreadsheet, word processor etc. programs that generate HTML tend to make very poor code with lots of redundancy so those translations always come out ridiculously large.

The version I have created will be transmitted every night on the SGARN multicast. - Let me know if I have made a dyslexia-driven mistake or need to update it.

Bart,

You missed the start time by an hour. That is you were an hour early.

Here are two Sunday nets with their times.

NJ NBEMS at 9:30AM Local 7.073 CF 1500Hz
PA NBEMS at 11:00AM 7.0725 CF 1500Hz

They'll be back next Sunday so try to join us. You'll be welcome!

Topic: 6618 Message: 6618

Hello OM:

Up until a few months ago, there was a paNBEMS net on 80 meters at 3583.5. It has since be abandoned. Instead, there is now a net on 40 meters starting at 11 AM Pennsylvania time Sunday. Starts with Olivia, then usually switches to another mode. NCS is usually down East.

There is a Sunday evening net on 3583 which starts at 7 or 8 PM local, but I never am available for that one.

Conditions here in Butler, PA were quite noisey today. I am not sure if they got my check in on40 today.

Hope this helps.

6619. Re: [paNBEMS] Your Posting

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-02-08 21:23:00 UTC
From: W. T. Jones
Topic: 6618 Message: 6619

The Sunday Evening paNBEMS Bulletin/Liaison Net starts at 7:30PM.

The frequency is 3.583 and the CF is ~1700Hz.

The reason for the approximate is that it sometimes has to be moved to accommodate QRM.

It is an Flamp broadcast with the paNBEMS bulletin and an opportunity to request fills before check-ins with traffic are solicited at the end.

All are welcome to listen in or bring traffic to the net after the bulletin.

Regards,

W.T.

6620. PA Net tonight

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-02-09 01:00:51 UTC
From: Michael A. Serowik
Topic: 6620 Message: 6620

I was monitoring the net tonight I did have flmsg and flamp open

I am seeing the information but not quite sure how to read it.

How do I read this?

Not sure if I have everything set up correctly.

de kb3fxi ncs paNBEMS Bulletin/Liaison net

pse stand by for net start at 7:30pm ET

R8XZz}pZ69

QST QST QST

this is kb3fxi, Pittsburgh, PA NCS paNBEMS Bulletin/Liaison Net

All stations stand by for FLAMP bulletin transmitted in mode MFSK-32.

Make sure current versions of FLDIGI, FLMSG and FLAMP are open and running
and

RxID is enabled/check marked at the upper right corner of the FLDIGI screen.

After the bulletin, we will remain in MFSK-32 and NCS will call for stations
who need

fills on the bulletin. Please do not transmit confirmed reports after the
bulletin

transmission.

Net stand by for mode change to MFSK-32 followed by this weeks FLAMP
bulletin.

6622. RE: [paNBEMS] PA Net tonight

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-02-09 01:50:47 UTC
From: Michael A. Serowik
Topic: 6620 Message: 6622

I was unable to save the file.

I will try this again next Sunday night to see if I can understand it.

Thanks

Mike-N3BSQ

From: paNBEMS@yahoogroups.com [mailto:paNBEMS@yahoogroups.com]
Sent: Sunday, February 08, 2015 8:10 PM
To: paNBEMS@yahoogroups.com
Subject: Re: [paNBEMS] PA Net tonight

In FLAMP, click the save button then go to the folder that file is saved in to open and read it.

-Dave, KB3FXI

Subject: [paNBEMS] PA Net tonight

I was monitoring the net tonight I did have flmsg and flamp open

I am seeing the information but not quite sure how to read it.

How do I read this?

Not sure if I have everything set up correctly.

de kb3fxi ncs paNBEMS Bulletin/Liaison net

pse stand by for net start at 7:30pm ET

R8XZz}pZ69

QST QST QST

this is kb3fxi, Pittsburgh, PA NCS paNBEMS Bulletin/Liaison Net

All stations stand by for FLAMP bulletin transmitted in mode MFSK-32.

Make sure current versions of FLDIGI, FLMSG and FLAMP are open and running and

RxID is enabled/check marked at the upper right corner of the FLDIGI screen.

After the bulletin, we will remain in MFSK-32 and NCS will call for stations who need

fills on the bulletin. Please do not transmit confirmed reports after the bulletin

transmission.

Net stand by for mode change to MFSK-32 followed by this weeks FLAMP bulletin.

Topic: 6555 Message: 6623

Thanks Charles.
Your right, I just saved the Excel document in HTML format with no attempt to reduce the file size. I didn't post either file with the intention that they were for NBEMS transmission, only as a reference for those online looking for net schedules. I'll delete the large one because now there are three versions of the same list and already they contain mismatching information.

From: n3fll@...
Topic: 6624 Message: 6624

If you check into the 40M paNBEMS net you know I've been calling for check-ins by Western, Central and Eastern areas. I did this thinking it would make it easier on everyone checking in and also the NCS. If in doubt as to your area here is a list of counties in each area. You chose which area to use, I'm not checking your choice:-)

73 & Thank you for your participation in paNBEMS nets
Frank N3FLL

PEMA Western Area Office
Western Area Office serves 24 Counties and the City of Pittsburgh in Western Pennsylvania.

(Allegheny, Armstrong, Beaver, Butler, Cambria, Cameron, Clarion, Clearfield, Crawford, Elk, Erie, Fayette, Forest, Greene, Indiana, Jefferson, Lawrence, McKean, Mercer, Somerset, Venango, Warren, Washington, and Westmoreland).

PEMA Central Area Office
Central Area Office cover the Pennsylvania counties of -

Adams, Bedford, Blair, Bradford, Centre, Clinton, Cumberland, Dauphin, Franklin, Fulton, Huntingdon, Juniata, Lancaster, Lebanon, Lycoming, Mifflin, Perry, Potter, Snyder, Sullivan, Tioga, Union and York.

PEMA Eastern Area Office
The Eastern Area Office has jurisdiction in 20 of the Eastern Pennsylvania Counties

(Berks, Bucks, Carbon, Chester, Columbia, Delaware, Lackawanna, Lehigh, Luzerne, Monroe, Montgomery, Montour, Northampton, Northumberland, Philadelphia, Pike, Schuylkill, Susquehanna, Wayne, and Wyoming).

Thank you for the college try. I guess it is really not necessary for FLAMP to function thru a macro but thought it would be handy for a weekly net situation.

Subject: Re: [paNBEMS] Re: The Sunday Night Digital Broadcast via repeater

Jim,

I did some experimenting with this but all I have gotten is frustrated. The concept is good but there is something about the last line in the Flamp transmission that doesn't quite fly.

What I did was used the concept that I used with Flmsg. That was to take the output of Flwrap and put it in a file and send it via the <FILE> macro tag. That works perfectly and thanks to the group for that suggestion.

I tried the same concept with Flamp. Run an flamp transmission through fldigi and capture the text output that appears in the receive window. Put it in a file and play file with the Flamp transmission back through Fldigi.

The first thing that I found was that line wraps caused problems so I shorted the block length to 64 to eliminate the line wraps in the window.

That worked just fine until that last block was sent. For some reason the last block will not make it through. This last block is the sticker:
<DATA 43 35D8>{844B:101}k2XGKt9Dk2oRXZa93v7aNLk
[b64:end]

I would imagine there is something in the string that has a character that starts on a new line that comes directly from Flamp that I can't capture properly.

The ideal method would be to have Flamp redirect its output to a file that can be sent with the File Macro tag.

So that is what I found. I'd like to be able to send an Flamp transmission the same way I send the Flmsg output. Without the help of the Developers I don't think that will happen.

Of course you can always send the entire transmission via Flamp.

If you come up with something please post it here.

Regards,

W.T.

Instead of a macro, have FLAMP function through a FLAMP script. - You can have any number of scripts in the script directory and call any one that you please, at any time. - This is no more difficult than utilizing a macro.

Like a macro, you must set it up ahead of time, then just call it when you need it.

Thanks for the info, Frank.
And keep up the great work with your NBEMS net.
NBEMS nets are popping up all over the place. I just had a nice chat with a fellow in WV and he told me they are relaying the paNBEMS Bulletin/Liaison net info on their local FM nets.
This year, I'd really like to see more liaison stations helping to move info to and from the paNBEMS nets.
We'll be emphasizing that on the upcoming bulletins.

6629. FLmsg Form Confidentiality

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-02-12 03:08:08 UTC
From: n9nmr1@...
Topic: 6629 Message: 6629

In FLmsg, there is a Red Cross "Safety and Welfare" form with several personal information fields (name, phone, address).

Can we send this completed information via our typical (unsecured) HF transmissions? Has anyone checked with (or have permission) from Red Cross to do this?

Thanks & 73, Carl/N9NMR

Carl,
You need to advise any served agency that any communications by amateur radio can not be encrypted an unsecure.
The threat of HIPPA legal actions has made unsecured health and welfare communications a very contentious act. Most served agencies would rather leave the families, concerned with the well being of their loved ones, in the dark rather than risk legal action by transmitting names and addresses over unsecured networks.

Dave is correct. Pursuant to 47 CFR (section) 97.113 (4), "no station shall transmit messages encoded for the purpose of obscuring their meaning". This is the "catch 22" with federal law that prevents us from encrypting sensitive information, such as HIPA data, with FLDIGI.

However, we do have the ability to compress the message and render it
non-readable by those who do not know that it is. Of course, signal
conditions must support the accurate transfer of the data so that it
can be expanded back to plain ASCII. We have had the same question
when it came to VHF AX.25 packet. When I explained that client and
BBS using JNOS could make use of LZW-Huffman compression, they begin
to accept what we are doing.

As noted, we cannot encrypt. Compression and digital may reduce the likelihood of intercept, but don't eliminate it.

HIPAA (not HIPPA) is the least of the worries. Where I am, the state, the towns, Red Cross, Salvation Army, etc. do not allow unencrypted radio transmission of names/addresses - period. Even if the person is completely healthy. There is just too much danger in sending unencrypted personally identifiable information over the air. For example, if we send a message over the air from "Joe and Susie Smith of Shickshinny, PA" to their children saying that they are safe in the shelter what we have really done is sent a message saying "hey everybody - there's nobody home at Joe and Susie Smith's house - it's unprotected, the burglar alarms are out of service, and whatever valuables they have plus their credit card statements, social security numbers, and other PII are there for the taking!!!!!".

And now we'll have the flame of all the experts who have never been involved in a real-world situation requiring evacuations telling us that everyone is being paranoid. Well, the people who are responsible for public safety don't think they're being paranoid at all - and they have the crime reports and arrest records to prove it. There used to be a guy in southwestern NY who was quite vocal that it was paranoia and to prove it he started announcing on a local repeater every time his house was going to be empty for more than an hour or so. It took all of two weeks before his house was burgled while he was out. Not only were valuables taken, but his social security number and credit card numbers (including security codes) were taken. He had a fun old time.

As for Dave's comment that

"Most served agencies would rather leave the families, concerned with the well being of their loved ones, in the dark rather than risk legal action by transmitting names and addresses over unsecured networks"

Well, yes they would because it's a lot safer for the people in the shelters. Plus, it is the year 2015. The information can get from the shelters to the families a lot faster via means that don't involve ham radio - especially because of ham radio's focus on carrying individual messages from station to station to station to station to someone close to the destination via nets that each meet only once a day. In every major disaster in the past 30 years - there was working phone and internet service within 100 miles of anybody in the disaster area. All that's needed is to get a USB thumb drive the 100 miles to the working phone/internet, something that can be done in a matter of a couple of hours.

And yes, we could have a disaster that wipes out internet and long distance phone across the entire country. The scenarios for that happening mostly involve damage to most every ham radio (e.g., EMP) which makes it a moot point.

From: Randy McGill
Topic: 6629 Message: 6634

HI Dave and group,
We have a MOU with a local hospital and we addressed this in our MOU and by stating clearly that all amateur communications were open source and not encrypted, therefore the ARES group would not be held responsible for any patient information that was included in amateur radio communications. We also clearly stated that every effort should be made to screen confidential information before it was presented to the amateur station for transmission. Would that protect us from HIPPA violations? Probably not but it is practically impossible to cover every eventuallity when it comes to dealing with human beings in crisis situations.

However, we do have the ability to compress the message and render it

non-readable by those who do not know that it is. Of course, signal

conditions must support the accurate transfer of the data so that it

can be expanded back to plain ASCII. We have had the same question

when it came to VHF AX.25 packet. When I explained that client and

BBS using JNOS could make use of LZW-Huffman compression, they begin

to accept what we are doing.

6639. Re: [paNBEMS] Net list

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-02-12 15:35:31 UTC
From: Charles Brabham
Topic: 6636 Message: 6639

For my part, with my long experience with Packet Radio networks, I never expect any of these lists of NBEMS nets to be complete or comprehensive in nature. - To do so is unrealistic, to the point of being ridiculous.

At best, we can try to assemble a list that is organized from the NBEMSham eGroup, inviting anybody who wants their net listed to contribute the data there. A good idea for that would be to delete any net info that is more than a few months old, otherwise there will be an ever-growing list of obsolete net data.

It was tried over and over again with Packet, and it always ended up being just that, a lot of obsolete data.

At the top of the list should be a brief reminder that the list is not, and cannot be either complete or comprehensive, but with the policy of removing old data, what is there will at least be reasonably valid and up to date.

That's about as good as it can ever be expected to get - and that's not so bad a thing as one might think. Do NBEMS groups in the southern tip of Texas really need data on NBEMS nets in Alaska? Not at all. It's all NVIS, intended to move data a few hundred miles at most.

6640. Flamp glitch

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-02-12 20:21:26 UTC
From: philip.shaver@...
Topic: 6640 Message: 6640

This may be operator error. Some of our net can't get the FLamp form to propigate. We receive the message on the Fldigi screen but nothing on Flamp. This occurs when Flamp autostarts with Fldigi. If we open up separatelu to seems to work better. Any comments about our glitch.

My guess is based on your report, that perhaps FLDGI isn't completely initialized when executing external programs. I'll check into this and see if it turns out to be true.

the freq 3.583 1715 hz on the waterfall MFSK32 de Skip

From: mailto:paNBEMS@yahoogroups.com
Sent: Sunday, February 15, 2015 6:30 PM
To: paNBEMS@yahoogroups.com
Subject: [paNBEMS] 3583

I am listening to the above frequency and around WF 1300 there is a quick burst of digital traffic.

I have my setup to enable RXID on and set to Olivia 8/500

Anybody know what the digital burst may be?

Thanks

Mike-N3bsq

Little bit behind the ball, for now if you are seeing the comm problems execute FLAMP outside of FLIDGI. Ensure FLDIGI has fully executed before starting FLAMP.

6655. FLamp and the "ToTX" tab

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-02-17 02:36:32 UTC
From: Dave Frazier wb0kgn
Topic: 6655 Message: 6655

Tonight in on our local two meter digi net, I was going to show everyone how to use the "ToTxQ" tab.
So we hit it. We were prompted to Save the message. When we hit Save, FLamp and its contents were dumped
...deleted. I did this several times as did several other members of the net.

We were using FLamp 2.2.00 and FLdigi 3.22.05

Dave in Minnesota

Subject: [SATERNSouth] We need YOU!

To coin the phrase used by recruiters during war time - WE NEED YOU! - (not that we are at war here in the homeland necessarily).
The SATERN So. Terr. 40 meter SSB net and the 20 meter digital net are in need of net control operators to add into the rotation for the weekly nets. We have a team of skilled and faithful operators who currently rotate into service once every 4-6 weeks depending on availability. Additional operators may lengthen the time between rotating into service for individual NCS volunteers.
The events calendar for this group will reflect the operator on duty for each week. The event calendar sends automatic email notices to group members for each event such as the weekly nets.
If you are interested in helping us maintain these nets, please forward an email to AD5XJ along with a brief outline of your amateur radio experience and equipment (and software for the digital net) in your shack that can be used for the net and in an emergency.
You must be a member in good standing with the ARRL and hold a valid license of General Class or Amateur Extra Class. Experience operating as net control in a net is a definite plus but is not strictly necessary. You must possess computer skills above novice level for the digital net and will be helpful on the SSB net to maintain computer generated logs and messages handled by the net control operator. It is highly desirable for candidates to be SATERN members and/or registered in the Salvation Army Disaster Services database as well.
For more information or to apply for the NCS duty contact AD5XJ at ARRL dot NET
de AD5XJ Ken SATERN So. Terr. Net Mgr.

Subject: [NY-NBEMS] VOA Radiogram, program 100, 28 Feb/1 Mar [1 Attachment]

Hello friends,

The Winter SWL Fest <http://swlfest.com> is taking place today and tomorrow (27-28 February) in Plymouth Meeting, Pennsylvania, near Philadelphia. One event during the Fest is "The Annual Spectacular Shortwave Shindig" with David Goren <http://www.shortwaveology.net>. The Shortwave Shindig will be transmitted by WRMI in Florida UTC Saturday at 0300-0400 (Friday 10-11 pm EST) on 7570 kHz. The Shindig will include, sometime during the hour, an image in MFSK32. There will be no RSID, so have your software set to MFSK32 and centered on 1500 Hz. Send reports to David at shortwaveology@...

Here is the lineup for VOA Radiogram, program 100(!), 28 February-1 March 2015, all in MFSK32, except where indicated:

1:59 Program preview
3:01 Cheaper method of scrap metal separation*
8:51 University students analyze Russia's RT TV*
17:10 Kim's comments about two years of VOA Radiogram*
26:39 Closing announcements*
28:26 MFSK16: Bonus mode of the week
* with image

Please send reception reports to radiogram@voanews.com

VOA Radiogram transmission schedule
(all days and times UTC):
Sat 0930-1000 5910 kHz
Sat 1600-1630 17860 kHz
Sun 0230-0300 5745 kHz
Sun 1930-2000 15670 kHz
All via the Edward R. Murrow transmitting station in North Carolina.

The Mighty KBC will transmit a minute of MFSK64 (an image showing the raffle grand prize at the Winter SWL Fest) Saturday at about 1230 UTC on 6095 kHz, and Sunday at about 0130 UTC (Saturday 8:30 pm EST) on 7375 kHz. Both frequencies are via Germany. Send reception reports to Eric at themightykbc@...

Thank you for the many very helpful reception reports received from last weekend's VOA Radiogram program 99. Some of the more interesting items from the mailbag will be posted later today at http://voaradiogram.net . I will compile the gallery of decoded MFSK images and try to respond to your reports by the end of the weekend. (Which reminds me: I still have a few reports from program 98 to answer.)

I can respond more quickly if you do not reply to this message, but instead send your report as a separate email. If you want to attach your decoded MFSK images, they are saved by Fldigi as png files in the Windows folder \fldigi.files\images\ or the equivalent in other operating systems.

Subject: Re: [NBEMSham] Re: Why you are needed!

Agreed, Charles.
There's a growing network of NVIS stations and nets capable of handing basic plain text data through manned operations, whereby trained NCS stations can manage traffic (very important) and the transfer of data in the absence of commercial power, traditional landline telephone, cellular voice and data and the internet.
NBEMS is simple and powerful.
One of the main goals with paNBEMS as we move forward is to work with NBEMS stations who can work both HF NVIS AND VHF/UHF to act as relays to help move messages and files to and from local VHF/UHF nets and statewide or regional nets. As more and more stations participate with NBEMS, the consolidation of check ins and traffic on statewide and regional nets becomes more important. We're working on this concept with our paNBEMS Bulletin/Liaison net on Sunday evenings where we transmit a FLAMP bulletin followed by a call for stations with traffic only.
It's very encouraging to see the FLAMP protocol/application finally being put to use in several nets and practice sessions that I'm able to copy on the air from my location. I would suspect that there are many others of which we're not aware.
The combination of FLAMP for wide area short bulletin distribution as well as larger file transfers and FLMSG for shorter form-based messages covers a lot of bases.
NBEMS is no substitute for commercial broadband, but when the high speed internet isn't an option, it's pretty amazing what can be done with the tools that we have in NBEMS.
The key, for those working with served agencies is to convey the limitations as well as the advantages of NBEMS.
-Dave, KB3FXIpaNBEMS Founder and PEMA/ACS Digital Manager

Subject: Re: [NBEMSham] Re: Why you are needed!

I like to think that NBEMS groups, more than any others, are prepared for service interruptions of various kinds.
Not being dependent upon the infrastructure is a major point in the favor of NBEMS.

#yiv7534840178 p {margin:0;}I am running FLamp 2.2.00 and windows 7

When I have gotten a message with FLamp, and I want to forward it, I hit the "ToTxq" tab. I am asked to save. When I hit save, FLamp and whatever was qued up in it is dumped. This is persistent and happens to several others.

From: ka9faj@...
Topic: 6668 Message: 6668

I have been running fldigi for awhile now, with no problems. I just downloaded the 3.22.05 version last Saturday before the rtty contest. That's when the problem started. Now, when I tx my info, and it goes to rx, it just locks up. The only way to reset it is shut it down and bring it back up again. I cannot complete a qso with it this way.

Has anyone else had/have this problem? Is there a cure being worked on? Should I go back to older version of the software?

Any help would be very much appreciated. Thanks for any help in advance.

Gary,
I've not seen any such reports. I wonder if it could be an RF issue in the shack? Try running very low power out and see what happens.

From: captjm1@...
Topic: 6671 Message: 6671

I have not found a way to open a saved flmsg file without accessing it thru an open flmsg opened application.

I would like to have the computers windows operating system recognize the file extension and open flmsg automatically. When I try and select flmsg as a default program from the default program list it is not on the list. When using the browser feature within the default program setup and finding/selecting flmsg it does not seem to have any affect? Has anybody got a handle on this?

Not only that, but I couldn't get it on the list. However, if I opened Windows in Save mode, then I could go through the usual procedures and add FLmsg to the list. I am sure you know it.

Well, this certainly isn't a deal-breaker for me.
In previous windows operating systems, we used to be able to set certain file types to open with specific programs. As far as I know, you can't do that past XP, but I may be wrong.
If you have FLMSG on your desk top, just go to the windows file, then drag and drop the file over the FLMSG icon on the desktop.

This one I can help with!

To setup or change the default program for nearly any file in any version of Windows from 7 and down (this might also work in 8),

Right click on the file while holding the shift key down.
Look for the "Open with" fly out, select "Choose default program...".
Browse to the program you want the file to open with. It's best to find the actual file and not a shortcut just in case the shortcut is deleted later.
With the program highlighted in the list, make sure that the "Always use the selected program to open this kind of file" check box is ticked.
Click OK.

The file should now be opened using the program you selected. This is also how I fix file associations that get hijacked by QuickTime and other aggressive installs. If you leave the check box unticked, the file will open one time with your chosen program but revert to the program originally associated with it next time.

Michael,
I didn't get the option of open with but right clicked on the file and selected properties and accessed the associate function there and it actually worked.
I think they must have made a change to Win7. I'm certain I couldn't do this before.

Subject: [paNBEMS] Re: flmsg and windows default programs

This one I can help with!

To setup or change the default program for nearly any file in any version of Windows from 7 and down (this might also work in 8),

Right click on the file while holding the shift key down.
Look for the "Open with" fly out, select "Choose default program...".
Browse to the program you want the file to open with. It's best to find the actual file and not a shortcut just in case the shortcut is deleted later.
With the program highlighted in the list, make sure that the "Always use the selected program to open this kind of file" check box is ticked.
Click OK.

The file should now be opened using the program you selected. This is also how I fix file associations that get hijacked by QuickTime and other aggressive installs. If you leave the check box unticked, the file will open one time with your chosen program but revert to the program originally associated with it next time.

Micheal,
Right click a FLMSG file then click properties.
Under the General Tab (file type/opens with) click Change.
Then click browse, find the FLMSG exe. Apply and save before exiting.

Sent: Thursday, March 5, 2015 7:00 PM
Subject: [NY-NBEMS] VOA Radiogram, 7-8 March 2015 [2 Attachments]

Hello friends,

VOA Radiogram for the weekend of 7-8 March will be for experimenters.

The first experiment involves the RSID, which instructs your software to switch to the correct mode and center audio frequency.

In the path few months, several listeners have noticed the RxID moves Fldigi to the wrong audio frequency, usually around 1140 kHz. I think it has something to do with the "halo" that sometimes surrounds the MFSK32 trace (see attached MFSK picture).

The first news item on VOA Radiogram will include five MFSK32 RSIDs (1 to 1 1/2 minutes apart) so that we can troubleshoot this problem.

Dave, W1HKJ, the lead author of the Fldigi suite, tells me that the problem is caused by "overdriven audio at the receiver." He's not sure at which point in the receive path that the overdrive is occurring, but his first guess is the input to the computer. "The user might be connecting a high level signal to the microphone input of the sound card (mic in on a notebook)."

Dave advises Fldigi users to look at the signal on Fldigi's signal view. In the lower left corner of Fldigi is the WF (for waterfall) button. Click it until SIG appears (see FLdigi SIG picture).

Dave says "never allow the audio waveform to exceed the upper and lower gray boundary lines."

During the weather volunteers' news item, start with your normal settings. Then try reducing the audio input to your computer. Note if the RxID directs you to the correct audio frequency, which should be 1500 Hz plus or minus a few Hz.

To reduce the level of audio into Fldigi, if you have the SignaLink interface, reduce the RX setting. Make a similar adjustment if you have another digital interface.

If you patch audio from the earphone jack of your radio to your PC, turn down the volume of your radio.

If you are using a line out or rec out jack of your radio, the audio level adjustment will have to be made within your computer. On a Windows 7 PC, this involves a right click on the speaker icon, then select "Recording devices," then right click on the input device. Next, select "Properties," then "Level," and reduce that level.

Attenuating patch cords or inline attenuators might also help.
Until recently, you could visit your neighborhood Radio Shack
and buy this handy headphone volume control
<http://www.radioshack.com/gold-plated-volume-control-cable-for-stereo-headphones/4202559.html>,
which is useful for adjusting the audio level between a radio and a computer.

You could also try adjusting the RF level. This can be accomplished by using an attenuator or RF gain control, if your radio has either of these, or by using a less sensitive antenna.

The second experiment will be a resumption, after several months, of a news item in the Flmsg format.

If you do not have an updated version of Flmsg (the latest is 2.0.8), download it from http://w1hkj.com/download.html . To make Flmsg work with Fldigi, in Fldigi: Configure > Misc > NBEMS: Under "Reception of flmsg files" click "Open with Flmsg" and under that indicate where your flmsg.exe program is located. If it works, Flmsg will open your default web browser and display the VOA News story on it.

One reason we are using Flmsg this weekend is that a beta version of the new AndFlmsg app for Android devices is now available. It is designed for use with Flmsg forms. If you have an Android device and want to try using this app to decode VOA Radiogram, the manual and files are at http://www.w1hkj.com/vk2eta. Be sure to read the readme.txt file and the manual.

Here is the lineup for VOA Radiogram, program 101, 7-8 March 2015, all in MFSK32 except where noted:

1:29 Program preview
2:52 Description of RSID experiment*
5:25 Volunteer weather reporters in the USA*
13:09 Iran cyber war (in Flmsg format)
19:59 White House proposes restructuring of Radio/TV MartÃ*
27:30 Closing announcements
28:32 Feld Hell: Bonus mode of the week
* with image

Please send reception reports to radiogram@...

VOA Radiogram transmission schedule
(all days and times UTC):
Sat 0930-1000 5910 kHz
Sat 1600-1630 17860 kHz
Sun 0230-0300 5745 kHz

Sun 1930-2000 15670 kHz
All via the Edward R. Murrow transmitting station in North Carolina.

The Mighty KBC will transmit a minute of MFSK64 Saturday at about 1230 UTC
on 6095 kHz, and Sunday at about 0130 UTC (Saturday 8:30 pm EST) on 7375 kHz,
both frequencies via Germany. Send reports for the KBC transmission to Eric
at themightykbc@...

Thanks for the many reports for our program 100 during the weekend of
28 February and 1 March. I'll compile the MFSK image gallery and respond
to your emails, I hope before the end of this weekend.

Learn something new every day...

On both of my Windows 7 machines (one of which is a virgin install as of yesterday), if a file has never had a program associated there will be no "Open with" option whether or not you hold the shift key down.

In that case, you can either click properties and change it there or click "Open" and then click "Choose from a list of installed programs".

Still unable to get this Lenovo laptop with win 7 pro to accept flmsg as the default program for .213 files. The system will not allow flmsg to show up in the list of available programs. I have selected it with the the browse feature a dozen times. I am accessing it with an administrator account. I tried it also with the firewall off and no luck. flmsg is in the programs x86 folder. I was fine with it before, now it has become a thing! It has to be some sort of security setting?

There must be some security setting blocking you.

I don't have any .213 files so I opened Notepad, typed some random text then saved it with a .213 extension. After associating it flmsg, flmsg will attempt to open it but fails with a not a flmsg data file error.

Dave,
Were you actually able to make the change and it is working?
What version of win 7 , pro? Any different firewall settings or different administrator settings within windows?
I just don’t understand why I cannot get Flmsg to show up on the list of useable default programs ?
Thanks,
Jim

Hi John,
I don't run OS X, but I can tell you where you might get help.
Check out the "linuxham" yahoo group, there are a lot of Mac users on
that group.
There was a couple of threads about FLdigi/Yosemite recently, search the
archive.

Date: 2015-03-10 19:54:02 UTC
From: Klaus Berkner
Topic: 6686 Message: 6689

John

The only problem I had when I installed fldigi on my macbook pro with OS X Yosemite was linking to flmsg. This was solved by inserting
“/Applications/flmsg-2.0.7.app/Contents/MacOS/flmsg” in the flmsg box
in: config>misc>NBEMS

Otherwise, the installation was same as windows.

Hope this helps

Subject: [NY-NBEMS] VOA Radiogram, 14-15 March 2015 [1 Attachment]

  Hello friends,

Last weekend's tests with audio levels and the "wandering RSIDs" were not especially conclusive. I will study your reports in more detail as I read and answer your emails in the next few days.

The VOA news item in Flmsg generally worked well.

A few listeners, including me, tried the new AndFlmsg Android app to decode VOA Radiogram. That was also successful. See more here:

http://voaradiogram.net/post/113349398627/decoding-voa-radiogram-on-android-devices

I bought a US$80 Android tablet. I never before owned a tablet or played with Android, but I was able to download the app and make it work. (I still have much to learn about tablets, Android, and the app.)

If you have an Android device, you can download the beta version of AndFlmsg from http://www.w1hkj.com/vk2eta/

It has been the custom on VOA Radiogram to insert line breaks at 65 characters. This seems to provide the best looking print-out of text on most personal computers. On this weekend's program, there will be no line breaks on the second news story: It will be pure "wrap." Let me know how it looks on your display. This will be especially interesting if you are trying the AndFlmsg app on an Android app.

This weekend's VOA Radiogram will include a brief Flmsg item (using plaintext form), just before the closing announcements and using the plaintext form. It will be interesting to see how this renders on personal computers using Fldigi and on Android devices using And Flmsg.

Yes, last weekend's transmission UTC 8 March at 0230-0300 had technical difficulties. The transmitter stayed on the air, but the audio input was interrupted in the beginning, so the first MFSK32 image could not be decoded.

Here is the lineup for VOA Radiogram, program 102, 14-15 March 2015, all in MFSK32 except where noted:

1:58 Program preview
3:02 Iran's "Halal" Internet*
10:37 Islamic state's Facebook alternative goes offline*
17:12 North Koreans import smartphones to store videos*
24:51 Flmsg about AndFlmsg
25:47 Closing announcements
28:19 Olivia 32-1000: Bonus mode of the week
* with image

Please send reception report to radiogram@...m

VOA Radiogram transmission schedule
(all days and times UTC):
Sat 0930-1000 5910 kHz
Sat 1600-1630 17860 kHz
Sun 0230-0300 5745 kHz
Sun 1930-2000 15670 kHz
All via the Edward R. Murrow transmitting station in North Carolina.

The Mighty KBC will transmit a minute of MFSK (an image showing the central railway station in Ede, the Netherlands, home of KBC) on Saturday at 1230 UTC on 6095 kHz, and Sunday at 0130 UTC (Saturday evening 9:30 pm EDT) on 7375 kHz. Both frequencies are via Germany. Reports to Eric at themightykbc@...

Thanks for your very interesting reception reports from last weekend.
I'll compile a gallery of MFSK images and respond as soon as possible.

6691. PEMA Weather Exercise - March 25, 2015

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-03-18 01:44:32 UTC
From: David Kleber
Topic: 6691 Message: 6691

Hello all,

PEMA/ACS and paNBEMS will be activated for the March 25, 2015 annual PEMA Statewide Weather Exercise.
The Amateur Radio Stations in both the Western and Eastern PEMA Area Offices, as well as the station at the State Emergency Operations Center (SEOC), will be manned and active.
Primary operations will by phone/voice on 40m with NBEMS as backup on 40m. Here are the Western Area HF frequencies that will be used:
- HF Voice 7.2720 MHz LSB
- NBEMS/FLDIGI 7.0725 MHz USB, 1500 Hz Center Waterfall, Mode Olivia 8/500 (MFSK-32 and other modes may be utilized).
These will be directed nets. All are welcome but please follow the direction of the net control stations.
-David Kleber, KB3FXIPEMA/ACS Digital Manager and PEMA/ACS Western Region Officer

Subject: [NY-NBEMS] VOA Radiogram, 21-22 March 2015 [1 Attachment]

Hello friends,

RSIDs: During the weekend of 21-22 March 2015, the RSIDs for MFSK32 and BPSK63 will be followed by five seconds of silence to give you time to change the audio frequency if it is not correct on your waterfall.

Punctuations marks: Last weekend, some listeners noted anomalies with the printout of various punctuation marks and accented letters, including "Mart" instead of the intended "Marti". This weekend's program will begin with some examples of punctuation marks in both typographic and typewriter forms. The former requires UTF-8, but the latter does not. There will also be two items in Spanish, a good test of the display of diacritics, and some Cyrillic characters in the story about Ekho Moskvy. In Fldigi, select the UTF-8 character set via Configure > Colors & Fonts.

BPSK63: Yes, we do mode requests on VOA Radiogram. Oscar in Italy asked for content in BPSK63 (also known as PSK63) so that he can test his DroidPSK Android app.
This app is available from http://www.wolphi.com/ham-radio-apps/droidpsk/ and costs $5.49. It is possible that some characters will not decode correctly in BPSK63, because it does not have the error correction capabilities of MFSK32.

Flmsg: This weekend's program includes another item in Flmsg (plaintext form). For Flmsg to work with Fldigi, in Fldigi: Configure > Misc > NBEMS: Under Reception of flmsg files, check Open in flmsg. Under that, indicate where your flmsg.exe file is located. If you also check Open in browser, Flmsg with open your default web browser and display the message as a web page.

AndFlmsg: If you have an Android device, VOA Radiogram can be decoded using the beta AndFlmsg app available from http://www.w1hkj.com/vk2eta/ . While AndFlmsg is designed to be used with Flmsg forms, it also displays content in plain text, i.e. not in Flmsg format, on its modem screen (the one with "W.Fall On/Off" bottom right). Please let me know your results with AndFlmsg.

MT63-500L is the bonus mode of the week. Because of its latency, you probably will not see the text until after the tone (more like a "buzz") has ended.

GRV transmitted in CW at the end of the program is the three-letter
abbreviation for the Greenville, North Carolina transmitter site.

Here is the lineup for VOA Radiogram, program 103, 21-22 March 2015, all in
MFSK32 except where noted:

1:22 Program preview
2:43 A note about punctuation marks
4:13 Greetings to the Antena DX radio program*
6:21 Iron rain once fell on earth*
11:56 BPSK63: Analysis of earth's ionosphere
13:50 MFSK32 resumes: Young scientists (in Spanish)*
18:07 Change of directors as Ekho Moskvy radio*
21:59 Reuters website inaccessible in China*
25:29 Decode VOA Radiogram on Android device (Flmsg plaintext form)
27:02 Closing announcements
28:05 MT63-500L: Bonus mode of the week
*with image

Please send reception reports to radiogram@...

VOA Radiogram transmission schedule

From: Chaplain Dave Sparks
Topic: 6694 Message: 6695

The issue is how the packet network, for example, gained "critical mass" in the first place, and how to replicate that. It might help to identify any existing networks that might be expanded and improved to give the necessary functionality and robustness. The various networks running the Winmor software might be a starting point. If I remember correctly, they are designed to deliver via internet when possible and via HF, when necessary. I have no idea how often that HF backup is exercised and how often it would be necessary to maintain reliability.

Another rather robust network is the VHF APRS, although it is currently capable of only handling short messages.

6696. re: FlexNet system/DX Cluster

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-03-22 14:01:21 UTC
From: <k3cc@...>
Topic: 6696 Message: 6696

More then 10 years ago I ran a FlexNet Network.... It covered from NYLI thru NNJ into Eastern PA..... One of the features of the system was the DX Cluster and packet Chat, store and forward. The reason it was widely used was the DX Cluster and the wide area Network.

The FlexNet Network had many nodes on HF and VHF..... World Wide traffic could be sent and received via VHF packet..... The entire Network was invisible to the user.... In Bethlehem, PA we ran several nodes on FlexNet from Packet node to HF Pactor, RTTY etc....

Because of the ease of use and short learning curve it was easy for the novice to use.

It would be interesting to interface the existing FlexNet Network with FLdigi messaging system. The common thread would be a multi use system for emergency use as well as everyday node to node chatter....FlexNet has the ability to receive thought an HF node and then down into a VHF system..... Messaging is done by callsign, no need to build any routes.... FlexNet is intuitive and know who is listening.....

This may seem like heresy, however, it would have many uses that could enhance the average hams experience..... TNC's are cheap used and plentyful....Simple VHF antenna and your up and running..... The trick is the interface of packet with the FLdigi message forms. The nodes would carry all of the switching..... I believe that the Eastern PA area is building a FlexNet network.. I have sent some of my FlexNet TNC's to Western PA for use in the system. If not an interface of Fldigi and FlexNet still run separate systems with a local packet system for county coverage and then download data to FLdigi liaison stations directed to PEMA.

The FLdigi / Flexnet concept certainly has merritt.

I would want to know: What is the upside and downside?

1. What would be required to interface if FLdigi is incompatible with the AX.25 packet protocol?

2. How much bandwidth would it use?

The conditions that existed when the packet network got its start are highly unlikely to be repeated. Hams got a real opportunity there, took good advantage of it - and then other hams came along and monkey-wrenched it out of existence.

The SGARN model does not depend upon on the "critical mass" concept.

Winmor is a digital mode, nothing more and nothing less. It's proprietary nature and WinLink team control-freak access makes it unattractive to many, if not most amateurs.

The Winlink outfit itself is bogus from top to bottom, I have no confidence that anything worthwhile will ever come out of that.

APRS is a crippled version of packet radio with its most advanced and useful features disabled. The utility there is severely limited as a result. It is what it is - and it is highly unlikely to ever be anything more.

I was pretty clear in the article as to how often an RF network needs to be exercised, in order to become and remain viable.

I wasn't suggesting that APRS be repurposed, but its routing CONCEPT (WIDEx-y) and the concept of fill-in digis is attractive. The idea is to provide a service that makes it significantly attractive to participate.

Packet was part of the allure of ham radio, namely the ability to do something not possible or at least feasible via other means. As it stands, hams have to go to the FCC, hat in hand, begging for permission to do things and employ technology that other services have been doing and using for years, even to the point of playing catch up with foreign hams and with MARS.

6701. Re: Flexnet Questions

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-03-22 18:12:43 UTC
From: <k3cc@...>
Topic: 6701 Message: 6701

Hi Lynn,

FlexNet can be used on HF using RTTY, Pactor and packet... What my main suggestion is to use FlexNet as a local VHF/UHF system for rag chew, DX Cluster etc. If necessary, FlexNet may have an HF port(node).... I have never setup a FLdigi to FlexNet node..... I have done packet,Pactor and RTTY..... They all use the same TNC..... My idea is to use a mail drop (file) to be read by Fldigi and then the file would be sent by FLdigi via a soundcard device..... Basically, send a file via packet to a node and then have in sent to the computer as a file..... An operator must be present to send the files.... During an emergency, you would want an operator to direct the traffic..... FLAMP can transmit any file type.

Packet has different bandwidths for the speed 300 baud is 3000 hz 1200 baud is faster but limited to VHF 9600 is faster yet but limited to UHF

Charles,
You're entitled to your opinion, just be aware that not everyone on most lists you're on share it.
1) I think we are at another point like existed in the 1980's when packet started, which is why I'm pushing (gently, of course) for the local folks to consider using it. I disagree with you about the cause of the disruption we had for a while (and that's really all it was) and what's kept packet alive since then.
3) Software might be closed source, but it's freely available to anyone; that only John Wiseman G8BPQ has chosen to support it only means that people have not given it a chance because of bias against a certain group of developers.
4) That's fine; I'm sure that DoD MARS, DHS SHARES, and a few international EmComm groups don't share your biased view of what has been accomplished, so you can continue to believe that the only reason for the existence of Winlink is to compete with commercial radio services for boaters, even though you've been told repeatedly, by different people, that it's not.

5) Another person that thinks APRS is just about vehicle tracking...
6) Yes, and that's why Winlink, for as much as you and others might dislike it, is probably the best thing that exists; it gets used every day. And since the relay aspect of Winlink uses the same software as the inbound HF component, a competent sysop will know when something in their system is failing and will be able to do something about it; all outbound messages are handled manually by US operators, on known frequencies (and these frequencies are made available on the Winlink website for public scrutiny, by the way).

Charles,
Not enough detail for them, I don't think.
1) BPQ32 already supports using fldigi as a modem at the BBS; what is needed is a method of getting data into the BBS from a user running fldigi at home, or a means of getting the flmsg data into the BBS for transport elsewhere.
2) Does FlexNet32 support FBB Forwarding for those that are going to use it as the packet switch?
3) Bandwidth is dependent on the modem chosen by the BBS operator for a given station (if operating a relay) or generally based on range. What is needed at this point is a way to know what modem or modems are available at a destination BBS at the client end (when using fldigi as a modem for a third party client application); Winlink client applications have access to this data and it can be updated via a radio link or over the Internet ahead of time.

Actually, it seems to me like there is no need for Hams in that loop.

If the internet is used, it obviates the need for radio, because if the internet goes down, the radio won't be doing much - its broken at the radio internet point.

Seems like a computer operator at an EC would do just fine until the network goes away. The if you re-introduce radio, people are just learning two separate systems.

I am firmly convinced that any hybrid system like that will just prove to fail when it is needed most.

Michael,
Traffic should always go through a ham, especially if you already have them in place in the EOC; the regular staff doesn't need to be trained in doing our job, as they have enough to do with their own in an emergency situation. They can hand us what needs to be sent, and receive from us whatever is coming in. Where we need to get things coordinated is how we handle getting traffic to local, district/regional and state EOC's; my view is that we should try as much as possible to keep things local and only go the next level up if the local level gets overwhelmed.

Actually, it seems to me like there is no need for Hams in that loop.

If the internet is used, it obviates the need for radio, because if the internet goes down, the radio won’t be doing much - its broken at the radio internet point.

Seems like a computer operator at an EC would do just fine until the network goes away. The if you re-introduce radio, people are just learning two separate systems.

I am firmly convinced that any hybrid system like that will just prove to fail when it is needed most.

Mike I do not understand your caution..... FlexNet and Packet do not use the internet Far from it, all the links are done on 440 Mhz 9600 baud and that is the backbone of the entire system..... The backbone and the FlexNet system is run just like packet radio to the operator.....The scope of the system is the linking of nodes via Radio, point to point.... Also FlexNet is intuitive...This means if any node where to go down, the FlexNet system would complete the link or search for another route... unlike packet, with TCP/IP or Unix, there are no routes for the local operator..... FlexNet hears all the stations on the Network and can route messages in many ways....All the nodes are in constant contact with each other... Again this is invisible to the user.

BPQ code is what makes FlexNet easy to use.....If you send a message on
FlexNet the operator would make a file of the message
and send it via FLAMP..... put the BBS message in notepad and save it and
the open to FLAMP to send via FLdigi...
FlexNet will do all the forwarding you need. FlexNet has a BBS built in...
I idea of handling emergency message to have an operator
on hand to receive the message and deliver it..... Think of it as 2
layers..... local packet VHF/UHF keeps HF free for messaging to State....
FLdigi, would be used for HF liaison to the state.....Just as the FM phone
VHF/UHF WX nets.....gather local WX for the state and the HF WX net
forward the WX to the state....

Charles,

Not enough detail for them, I don't think.

1) BPQ32 already supports using fldigi as a modem at the BBS; what is needed
is a method of getting data into the BBS from a user running fldigi at home,
or a means of getting the flmsg data into the BBS for transport elsewhere.

2) Does FlexNet32 support FBB Forwarding for those that are going to use it
as the packet switch?

3) Bandwidth is dependent on the modem chosen by the BBS operator for a
given station (if operating a relay) or generally based on range. What is
needed at this point is a way to know what modem or modems are available at
a destination BBS at the client end (when using fldigi as a modem for a
third party client application); Winlink client applications have access to
this data and it can be updated via a radio link or over the Internet ahead
of time.

The idea of using packet at the local and state level is this.... The only way folks will use it is if they practice with it....
The FlexNet network can be used for a DX Cluster.....This I hope would entice users to use packet radio....Packet would
and can be used by Tech license's not so with HF FLdigi.. Swap net via packet could be sent out and kept in a bulletin
boards as well as tech tips or questions by folks.... The same way we are using the internet today...But, utilizing the air
waves... The bands are dead on VHF/UHF why not try to populate them as we did years ago.

You can run pretty well any kind of data through FlexNet. I operated an FBB BBS with FlexNet for years, no problems with forwarding on VHF. FlexNet only worked on HF with the Q15x25 modem, with 300 baud packet you could only utilize it by defeating FlexNet's active, intelligent Ax25 features, which were designed for VHF or higher.

6711. FLdigi 3.22.06 bug?

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-03-25 16:47:31 UTC
From: captjm1@...
Topic: 6711 Message: 6711

After installing the new release 3.22.06 an " audio error message -Invalid # of channels" appears.
Using Win " Vista" OS. and Rig-blaster Advantage.

Tried re-installing and had same results. I am back using version 3.22.05 with no problems. I have read on other web sites that folks are having the same issue.

Thoughts or comments?

From: <k3cc@...>
Topic: 6713 Message: 6713

It would be a nice package to run one modem program FLdigi.... FlexNet is totally transparent to the user, but would provide
a direct massaging system to one station if necessary......
I have used the "NOTIFICATIONS" in FLdigi to save messages when the station is unattended..... The notifications work well and I have explored some of there use...
Has anyone else played with them ?? I have not had the time to learn Strawberry Pearl as yet, I guess that is how to change some of the parameters....

One advantage is that all licensee's can learn to use FLdigi......
VHF/UHF nets are using FLdigi now but the stations are attended and they work through repeaters.

The advantage of FlexNet would be a node system linked by a backbone on 440 mhz, and no repeaters would be needed... Local folks could work
in there county and provide emergency info to a county paNBEMS Liaison for HF relay.....
The paNBEMS could have 3 liaison stations, East Central and Western PA, to relay info to PEMA..... VHF/UHF FM phone would be used for local emergency response
and to relay only traffic to a digital station that would need to go to PEMA....

Any comments ?

Just a reminder...
Mine, and I'm sure some other stations, monitor 7.0725 USB daytime from 8am to 7pm ET and 3.583 USB from about 7pm to 8am ET.
All and any stations are welcome and encouraged to shoot out a FLMSG message or FLAMP file on these spots. If you have a message you would like to submit for inclusion to the paNBEMS bulletin, or you'd just like to say hello, please feel free to do so. Just make sure you transmit the RSID tone (TxID enabled on FLDIGI) and please use either FLMSG or FLAMP.
My station monitors these spots every day unless there are thunderstorms in the weather forecast.
Let's exercise the HF bands!

Welcome aboard, Allan. If you scroll down on the info page for paNBEMS, you'll see the details on the paNBEMS call spots and frequencies. https://groups.yahoo.com/neo/groups/paNBEMS/info 7.0725 MHz is the transceiver dial frequency we use during the day. For FLDIGI, we use 1500 Hz center (+/- 500 Hz) for the spot on the waterfall. For our net check ins and for short FLMSG messages, we use Olivia 8/500. For bigger FLMSG messages we usually switch to MFSK-32. And for larger FLAMP files we usually use either MFSK-32, 5xPSK63R or 4xPSK125R. If you would like to send out a message, please transmit RSID (enable TxID in FLDIGI) so my station will automatically switch modes. -Dave, KB3FXIpaNBEMS Founder

Dave, forgive my ignorance….I’m new to paNBEMS. When you say monitoring 7.0725 do you mean 7072 with a center frequency of 500? Also just curious about how you are monitoring? Any details are appreciated. Are you expecting messages using MT63 2000L or Olivia 8/500 or what?

Just a reminder...
Mine, and I'm sure some other stations, monitor 7.0725 USB daytime from 8am to 7pm ET and 3.583 USB from about 7pm to 8am ET.
All and any stations are welcome and encouraged to shoot out a FLMSG message or FLAMP file on these spots. If you have a message you would like to submit for inclusion to the paNBEMS bulletin, or you'd just like to say hello, please feel free to do so. Just make sure you transmit the RSID tone (TxID enabled on FLDIGI) and please use either FLMSG or FLAMP.
My station monitors these spots every day unless there are thunderstorms in the weather forecast.
Let's exercise the HF bands!

Right!! Thanks for that information. I'll check out the Yahoo Group page again. I was monitoring that frequency a little today while at the computer but didn't see any signals. I am using an FT-857D with a Signalink USB and the mode is set to DIG with the PSK31-U option. If I use a straight SSB USB it won't transmit.

WT Jones WN3LIF gave our SUN ARES group a great presentation a few weeks ago about using Fldigi and how it's used with NBEMS. It was a lot of info and he did a superb job!! I was able to receive a few of the messages during WX drill a week ago. Very cool!!

I'll try to send a message or two in the next few days. Tonight I am the NCS for SUN ARES net at 7:30PM on 147.27 PL 100 in the Sunbury area.

6723. Fw: [SATERNSouth] New FLDIGI v3.22.07 posted

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-04-02 14:25:29 UTC
From: David Kleber
Topic: 6723 Message: 6723

New versions of FLDIGI and FLAMP are available at: http://w1hkj.com/download.html FLDIGI 3.22.07 was just released this morning. FLAMP 2.2.01 came out recently and now has an auto save function so when a file is received 100% it is automatically saved to a file folder. I am monitoring 7.0725 USB today (unmanned while I'm at work). If anyone is available today, please send me a FLAMP file. Please be sure to transmit RSID (TxID enabled in FLDIGI). Depending on the size of the file, here's what I would recommend: File size under 3k, use MFSK-32, 128 block size, 2x Xmt Rpt (transmits the file twice), 2x Hdr (transmits the header twice)

File size under 5k, use 5xPSK63R (under modes, PSKR, Multicarrier) 2x Xmt Rpt (transmits the file twice), 2x Hdr (transmits the header twice) Thanks in advance. -Dave, KB3FXI

Subject: [SATERNSouth] New FLDIGI v3.22.07 posted

Dave Freise, W1HKJ has posted v 3.22.07 on his web site. He as described the update this way:

Version 3.22.07

Macro edit
* correct initialization of text size in configure panel

Multi-psk
* bug fix programming errorwhich caused tx overdrive

Vista SignaLink driver
* Vista driver disallows 2 channel input. Causes sound card open failure on read.

Command line
* Fix command line parsing and use of
- xmlrpc server address/port
- arq server address/port
- flrig server address/port

SSB default signal
* change default rst to 59 vice 599

Digiscope resize
* Added clear video for digiscope resize

FSF address
* correct Free Software Foundation address in various files

Image update
* update to help image, folder-files.png

posted at http://www.w1hkj.com

You should update your installation as appropriate. We will update WB5ALM asap.

From: David Kleber
Topic: 6723 Message: 6724

Thanks, WT, for the FLAMP test today. I got both files perfect.
Interesting thing is that the auto save appears to have created a sub-folder under RX folder named 02_03_2015_UTC. I think I saw another report on this possible file name bug as I would assume that it should be 02_04_2015_UTC. I'd actually prefer if the file folder would be 2015_04_02.
In any case, I really like the auto save feature and I'm glad that was added to FLAMP.

Hi, if anyone want to try, I will have my station up overnight on 3.583, USB, 1500, Olivia 8/500 and FLMSG. I haven't figures out FLAMP.

So, if you want to send me a message. The worst that can happen is it doesn't work

Glad the tests worked but I really didn't have much doubt that they wouldn't.

Yes, I noticed the folder name too but since our discussion last weekend my time was sucked up by the EPA SEC job. Section jobs are rewarding but they can be time consuming.

The autosave function in Flamp appears to place the date value in the previous month.

I'll post something on the NBEMSham group about it.

Regards,

W.T.

Update Caution: If you have multiple macro descriptions, or saved messages you may have to save your previous versions and transfer the data to the new file locations.
also up date your autostart for Flamp.

Has anyone had any success running fldigi on the raspberry Pi ? With tons of help from a friend I got fldigi 3.22.07 compiled on a Raspberry Pi 2 but I am having problems getting "pulse audio" working properly and for the Pi to decode any data. Fldigi launches ok and I can get the waterfall to respond to open squelch from my fm transceiver and can send a tune signal that I can hear in handheld but no success decoding data yet.

Hello all,
WT (wn3lif) and I were chatting on the air Sunday after the close of the paNBEMS net and discussed the idea of a paNBEMS drill.
The idea would be a weekday exercise, maybe running from 8am to 11am or 2pm to 5pm ET.
The goal would be to move traffic such as ICS-213 messages with FLAMP and larger volumes of data with FLAMP which could be detailed situation reports, resource request and CSV spreadsheets.
We would like to open up idea to debate, suggestions and comments here and potentially set a date and get firm commitments from at least 20 NBEMS HF stations to participate.
Feel free to jump in and share your thoughts on this idea.

A summer exercise would be fun.. As long as it's a nice day and we can have music and a cute instructor to lead the exercise's....
Maybe a picnic lunch with deviled eggs, fried chicken etc..... Hope you can pick and grassy place with picnic benches......110 VAC also needed
Dave if you offer food and drink you may find someone....
Summertime is a time to work around here.. Weekends I try to relax.

One night time exercise with mobile and portable's set up maybe the ticket.... Daytime workers will be home and us non-workers will just stay up longer and not watch TV..... This would stretch the abilities of the stations and provide a new variable... Night time operation and portable/mobile.
That's from about 6 to 8 PM still daylight but after working hours.
Working only with a battery pack or AC generator or from a vehicle would be a new experience for some. This would simulate a disaster situation were one would have to work without the benefit of a good antenna system and learn how to relay FLAMP's and FLmsg's. "Be Radio prepared" could be the motto of the exercise.

Any takers ??????

A weekend or short evening drill may work.
I listened in to the WX drill on March 25th hoping to participate. I admit I joined late. I thought it confusing and did not appear to operate as a net. I monitored for over an hour for a general request for a WX report or for Check-ins. paNBEMS, wpaNBEMS and EOCs were conversing back and forth using only call signs I do not know so I could not determine who was the NCS. If you didn't know the players by their call signs you were lost. I saw one WX report that came in as straight text on Olivia and one in Flmsg format.

New England runs organized ARES drills twice a year with the National Weather Service participating. Those drills are preceded with a written operations plan that detailed the procedures to be used, the frequencies, names the NCS, how to submit reports, 2M repeater participation and forwarding instructions, etc, etc.
I do not know if they use FLdigi for the drills.

Just a suggestion: No intent to overstep. Only to be helpful, I’ve attached an outline you may find useful to organize and conduct a drill.

Ken KB1BH

Ok, Ken.
Thanks for the info. I'll check out your attachment.
The last PEMA WX drill had us (paNBEMS) only running as backup for the phone nets. So, that's why we didn't have the regular flow we usually have in a paNBEMS net.
If we pull off an exercise for paNBEMS this summer, I hope to have at least 3 stations to act as NCS... 1 primary and few stations who can stand in as back up. Also, we'd like to have several stations to act as liaisons from their local areas who have both HF and VHF capabilities to move data to and from the PA Statewide net and their local nets.
But it's not going to happen unless we can get a firm commitment from enough stations.
As the discussion continues, and we get enough folks showing interest, we'll try to firm up a date and see where we can go from there.

Dave,
Sounds good.
Butler County EOC can have operators available during the day, However it depends on work schedules so I would have to know dates and times to actually commit to having HF activated from the EOC.

Thanks, Jim.
Let's hope we get some more interest in this potential exercise. I think it would be good practice and I'm really interested to see how we can leverage manned operations on digital modes to challenge our skills in the area of handling relatively large volumes of data and check ins in an emergency communications scenario.

WT (wn3lif) and I were chatting on the air Sunday after the close of the paNBEMS net and discussed the idea of a paNBEMS drill.

The idea would be a weekday exercise, maybe running from 8am to 11am or 2pm to 5pm ET.

The goal would be to move traffic such as ICS-213 messages with FLAMP and larger volumes of data with FLAMP which could be detailed situation reports, resource request and CSV spreadsheets.

We would like to open up idea to debate, suggestions and comments here and potentially set a date and get firm commitments from at least 20 NBEMS HF stations to participate.

Feel free to jump in and share your thoughts on this idea.

During the summer hours we have more daylight....
Practice setting up portable or mobile stations would be helpful....
Operation of FLdigi is only part of the exercise.... Sending and relying
FLAMP, FLmsg and creating messages would be
great fun and using portable or mobile stations relying info would give them
more practice in message handling.....

During the summer months most folks are off on vacation... How about after
the July 4th holiday and before August heat ???
July 12th through the 25 would be in the middle of the month..... More
folks maybe able to participate after working hours
say 6 to 9 PM at night.... Would the local emergency EOC's be open for a
nightime exercise ?

What do you folks think about the dates and times ?? Would portable
operation setup be possible ?? Relaying and creating
message practice help new digital op's ?????

Subject: [NY-NBEMS] VOA Radiogram, 25-26 April 2015 [1 Attachment]

Hello friends,

Last weekend's transmission of Russian text in MFSK64 worked well for most listeners. Using a receiver in Slovakia, I had perfect decodes on 19 April of the 0230 broadcast on 5745 kHz and the 1930 broadcast on 15670 kHz.

This weekend will be straightforward MFSK32 except for the MT63-2000L bonus mode during the closing music.

Here is the lineup for VOA Radiogram, program 108, 25-26 April 2015, all in MFSK32 except where noted:

2:45 Report urges overhaul of US international broadcasting*
8:46 CPJ names the ten most censored countries*
15:44 Turkmenistan cracks down on satellite dishes*
23:34 Ukrainian channels taken off Crimea cable TV*
26:30 Closing announcements
23:09 MT63-2000L: Bonus mode of the week
* with image

Please send reception reports to radiogram@...

VOA Radiogram transmission schedule
(all days and times UTC):
Sat 0930-1000 5745 kHz
Sat 1600-1630 17860 kHz
Sun 0230-0300 5745 kHz
Sun 1930-2000 15670 kHz
All via the Edward R. Murrow transmitting station in North Carolina.

The Mighty KBC will transmit a minute of MFSK64 Sunday at 0130 UTC (Saturday 9:30 pm EDT) on 7375 kHz, via Germany. Reports to Eric: themightykbc@...

WRMI, Radio Miami International, will transmit digital IDs this weekend. I would especially appreciate recordings of the Olivia 32-2000 during poor reception conditions. Reports to Jeff: info@...

Center audio
UTC Day UTC Time frequency Mode
Saturday 1014:30 2000 Hz MFSK32 image

Saturday 2129:30 2000 Hz MFSK16
Sunday 0129:30 2000 Hz MFSK32
Sunday 0329:30 1500 Hz Olivia 32-2000
Sunday 1029:30 2000 Hz MFSK32 image
Sunday 2259:30 2000 Hz MFSK16
Monday 0059:00 2000 Hz MFSK32
Monday 0329:00 1500 Hz Olivia 32-2000

AndFlmsg. If you have an Android phone or tablet, please try to decode VOA Radiogram using the beta AndFlmsg app, B0.5.0, which can be downloaded from http://www.w1hkj.com/vk2eta/ This new version can decode MFSK images as well as text.

Thank you for your reception reports. I'll compile the gallery and send responses over the weekend.

Was involved with a hospital SET. Brought my HP f300 printer. It is slow. Only one that showed who was able to run NBEMS. Only used voice. Had to write down messages to take to the Incident Commander. Of all you tube and other info no mention has been made of how to print the messages which in the Incident Command System would be needed. 'If it is not on paper it did not happen.' Any suggestions? Andrew KB8MUA

You need to learn how to use FLMSG. If someone sends a message form through FLMSG, my program will receive the file, save it to a fldigi.files folder, convert it to an XML file, send it to the default browser. I can then hit CTRL-P and print it out if a printer is attached (or online). There a couple of places, I think, you have to tell FLDIGI to open up FLMSG when FLDIGI starts up. There are dozens of forms available through FLMSG, including ICS-213 and ICS-213H. MARS forms, ARRL Radiogram, etc. It's pretty neat watching the form come up in the browser automatically.
If you want to practice sometime, give me a call. We'll schedule something on the air.

I'm new to NBEMs, but my ARES/RACES group has been using it for several years.

Voice messages are perfectly acceptable for emergency communications, providing the sending and receiving operators pass them as they were submitted for transmission. When the receiving operator copies it to paper, it becomes record communications. AA5XO wrote "If it is not on paper it did not happen." Well, the receiving official gets it on paper, so it's a matter of record. That's how we passed traffic before digital modes became readily available to the ECOMM community. We still do it that way when we can't pass traffic digitally.

I don't claim great expertise in NBEMS so anyone who knows what they are doing is more than welcome to correct or comment on anything I write.

I think the question I should have asked is what printer would have been good to have? Writing the message by hand from the computer screen does not make the best use of fldigi and flmsg. A balance of being correct , speed, and documented needs to be found. I do appreciate all your comments and thank you. Looking forward to more. Andrew kb8mua

A laser printer would be your best bet for speed and reliability. A small one can had for around $60.00. In a pinch you could ask the facility for access to their printer, since you are there for their benefit, they may accommodate.

Well, what you use depends on your situation. Some smaller inkjet printers work with low DC voltages (ie. not 120 v) with less reliance on comm. power.

be prepared for whatever comes.

Regards and 73's,

Dave, KB3YCK

News reports this morning put the casualty estimates in excess of 3600 in and around the capital city of Katmandu. This number will rise as the rural areas are searched as well as the remote villages on and around Mt. Everest.Please keep the aid and relief workers in your prayers. If you have the time and the inclination to listen on the frequencies shown above, please do so. Remember to respect the process involved and listen more than you transmit.If you need more information or need to have H & W contact with anyone in the Napal area, please forward your requests to disaster.salvationarmyusa.org or contact myself or Bill Feist at our published email.

I've been monitoring the traffic on WebSDR. 20 meters. I can only find USB so far. 14.205 is emergency traffic and coordination.
14.23 or 14.235 or 14.215 is for health/welfare and volunteers (depending on QRM).

I do know that there are only a few registered/active operators in Nepal. The last I saw the only VHF/UHF repeater is down and that there was only one operator who could get on the air using battery and solar chargers. With the weather overcast he has not been able to recharge for the last two days. I understand that 95 % of Nepal is without power.

I did hear late Sat night that the operators who would normally be running the net were involved in the event so others have had to jump in.

Hopefully once they get some boots on the ground with radios they will have better comms in the area.

Last official check: 3500+ deaths with 6300 injured. However with comms down throughout the area, I'm would think that this is only a start. The UN is predicting 10,000+ dead when its all done. I think there will be updated numbers released within the next hour (12:00 East).

Dear Western PA ARES/RACES and ACS Coordinators and friends,

Three vital communications courses are being taught in the Commonwealth over the next four months. Could you please assist us by getting the word out about these courses. It took us two years to bring the courses to Pennsylvania and we hope that everyone who wishes to attend has the opportunity. If we can't fill these classes we will find it even more difficult to schedule them in the future.

All-Hazards Communications Unit Technician (ComT) Course:

Eleven (11) seats are available in the Communications Technician course To be run at BCCC from August 3rd-7th. They are available on a first come, first seated basis. Please follow the instructions on the attached flyer.
The prerequisites MUST be submitted for these and ALL Emergency Management courses being conducted. This course is a "technical specialist course" and therefore students should be trained in "technical" skills. This course is not specifically designed for ARES/RACES and ACS personnel but they are welcome to attend the course. The prerequisites for this course are outlined in the attached flyer.

All-Hazards Communications Unit Leader (ComL) Course:

Twenty-seven (27) seats are available in the Communications Unit Leader course To be run from August 28th-30th at the PEMA Conference. They are available on a first come, first seated basis. Please follow the instructions on the attached flyer. This course requires that all applicants complete a FEMA form 119A and have their supervisor sign it. This documentation along with documentation of completion of the prerequisite courses must be turned in prior to admittance into this course. This course is designed for personnel who will be in charge of a group of communicators. You learn to plan ahead and how to fill out the FEMA ICS Documentation required by the communications unit. You learn to deal with

personnel problems sometimes encountered during deployments. This course is not specifically designed for ARES/RACES and ACS personnel but they are welcome to attend the course. The prerequisites for this course are outlined in the attached flyer.

Auxiliary Communicator (AuxCom) Course:

Twenty-nine (29) seats are available in the Communications Technician course To be run at BCCC from July 25th-26th.. They are available on a first come, first seated basis. Please follow the instructions on the attached flyer. This course is designed for Amateur Radio Operators with at least a General Class License who will be operating out of a County or State EOC/Radio Room or who will be communicating with State and County ARES/RACES or ACS Operators during a disaster or large scale event. The prerequisites MUST be submitted for these and ALL Emergency Management courses being conducted. The prerequisites for this course are outlined in the attached flyer.

Verifying the prerequisites for EVERY course is vital to the integrity of the instruction program with which FEMA and the Emergency Management Institute has entrusted us. Thank you so much for assisting the PEMA Training and Exercise Division in maintaining this trust.

Thank you for sending your employees and/or volunteers to these courses to hone their technical and management skills so that they may more ably serve the 12.7 million citizens of Pennsylvania during times of disaster, both large and small.

Sincerely,
Susan

Amateur radio operators:

The following information is forwarded at the request of Susan Singer, PEMA ACS Coordinators

Dear Central PA ARES/RACES and ACS Coordinators and friends,

Three vital communications courses are being taught in the Commonwealth over the next four months. Could you please assist us by getting the word out about these courses. It took us two years to bring the courses to Pennsylvania and we hope that everyone who wishes to attend has the opportunity. If we can't fill these classes we will find it even more difficult to schedule them in the future.

All-Hazards Communications Unit Technician (ComT) Course:

Four (4) seats are available in the Communications Technician course To be run at PEMA HQ in Harrisburg, PA from May 11th-15th. They are available on a first come, first seated basis. Please follow the instructions on the attached flyer. The prerequisites MUST be submitted for these and ALL Emergency Management courses being conducted. This course is a "technical specialist course" and therefore students should be trained in "technical" skills. This course is not specifically designed for ARES/RACES and ACS personnel but they are welcome to attend the course. Click the link just below to see the course flyer:

http://tinyurl.com/kaj2gqh

All-Hazards Communications Unit Leader (ComL) Course:

Ten (10) seats are available in the Communications Unit Leader course to be run at PEMA HQ in Harrisburg, PA from May 26th-28th. They are available on a first come, first seated basis. Please follow the instructions on the attached flyer. This course requires that all applicants complete a FEMA form 119A and have their supervisor sign it. This documentation along with documentation of completion of the prerequisite courses must be turned in prior to admittance into this course. This course is designed for personnel who will be in charge of a group of communicators. You learn to plan ahead and how to fill out the FEMA ICS Documentation required by the communications unit. You learn to deal with personnel problems sometimes

encountered during deployments. This course is not specifically designed for ARES/RACES and ACS personnel but they are welcome to attend the course. Click the link just below to see the course flyer:

http://tinyurl.com/ngmvpk5

Auxiliary Communicator (AuxCom) Course:

Twelve (12) seats are available in the Communications Technician course To be run at PEMA HQ in Harrisburg, PA from June 6th-7th. They are available on a first come, first seated basis. Please follow the instructions on the attached flyer. This course is designed for Amateur Radio Operators with at least a General Class License who will be operating out of a County or State EOC/Radio Room or who will be communicating with State and County ARES/RACES or ACS Operators during a disaster or large scale event. The prerequisites MUST be submitted for these and ALL Emergency Management courses being conducted. Click on the link just below to see the course flyer:

http://tinyurl.com/ovmsr82

Verifying the prerequisites for EVERY course is vital to the integrity of the instruction program with which FEMA and the Emergency Management Institute has entrusted us. Thank you so much for assisting the PEMA Training and Exercise Division in maintaining this trust.

I know that we have had a problem getting task books signed off in the past. The commonwealth had never recognized a “statewide certification” in ComL and ComT before now. All certifications were recognized only at the local level. We are working with the statewide “powers that be” to provide recognition of the certification at the state-wide level. We are working with both state and federal partners to provide a method for those that have already taken the courses to get their task books signed off. It is a slow start but eventually we will get everyone caught up.

Hi Jim,

FLdigi already does AMTOR-B (FEC) it is listed as SITOR-B in the op mode list.

Pactor requires a proprietary $$$$ modem that is not GPL compatible.

Jim,
Pactor 2 and higher are what require the proprietary modem; I actually have the source code for an open source Pactor 1 software modem that I've been debating about integrating into fldigi so it can at least be used to decode all Pactor ID's (since all four levels use the same ID Frame code).

Thanks Matthew I was not aware of that fact.

How much Pactor 1 vs 2,3,4 traffic is on the air would be the
consideration in doing the work to include P1.
I am not a C++ programmer. But would like to try it on the air with
NBEMS messages.

6763. Indiana SET and NBEMS

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-05-14 02:02:10 UTC
From: David Kleber
Topic: 6763 Message: 6763

I wonder if anyone had a chance to monitor the Indiana SET tonight down on 80m?
They did a great job and passed a lot of FLMSG messages with NBEMS.
I sat in the background and monitored but was ready to jump in if any relay requests were put out by the NCS.
It's great to see NBEMS being put to good use.

Colorado ARES Volunteers Support Grueling RacePikes Peak Amateur Radio Emergency Service (PP ARES) volunteers provided communication support on May 2 for the 2015 Falcon 50 Ultra-Marathon. Competitors in the "military-heavy" 50-mile event carry 35-pound rucksacks while wearing boots and uniforms, said Pikes Peak ARES PIO John Bloodgood, KD0SFY. He said 170 runners tested their mettle on the rugged terrain and high altitude of the marathon course at the United States Air Force Academy in Colorado Springs."They were not alone," he said. "Supporting them was a volunteer team of Amateur Radio operators from the Pikes Peak District Amateur Radio Emergency Service. Twenty-two operators, one of whom was also a participant in the marathon, set up six stations around the course to track and report runner progress, coordinate supplies and transportation, and report any emergencies on the course."Bloodgood said this meant having everything up and running before the race start time of 6 AM and operating through the 8 PM finish line cut-off time. "Using radios in areas where cell phones often have spotty reception and the same techniques that make ham radio a huge asset in disasters, the ARES operators passed runner progress messages, tracking each bib number as it passed through an aid station," he explained. The ARES volunteers used Fldigi in MT63 2000L mode, with Flmsg sending Incident Command System Form 213 messages over UHF FM radios. "This digital system is exactly the same as hams might use to support incident commands during disasters and emergencies," Bloodgood said.Messages were automatically compiled into the Bib Track software developed by Al Glock, KC0PRM, that was originally designed to track patients during a mass casualty event. "This software can even predict when a runner should arrive at the next aid station," Bloodgood added. More than 1070 runner position reports were passed. The hams also used voice modes and APRS.Bloodgood said the Falcon 50 gives Pikes Peak ARES members a valuable opportunity to hone their skills in preparation for emergencies and disasters. Pikes Peak ARES has supported the event every year from its start 4 years ago. Read more. -- Thanks to Pikes Peak ARES PIO John Bloodgood, KD0SFY

Subject: [NY-NBEMS] VOA Radiogram, 16-17 May 2015 includes news in MT63-2000L [1 Attachment]

Hello friends,

After the MT63-2000L bonus mode of program 108, Walt in the UK suggested that we transmit an entire news story in this mode. That will happen this weekend. This long-interleave version uses the entire 2000 Hz we have available in one sideband of a shortwave AM channel. I have measured its speed at nearly 200 words per minute, about twice as fast as our usual MFSK32 mode.

Here is the lineup for VOA Radiogram, program 111, 16-17 May 2015, all in MFSK32 except where indicated:

1:29 Program preview
2:44 VOA increases broadcasts to Burundi*
8:09 Forest management to reduce hunger*
16:02 Shipwreck found during search for MH370*
23:19 MT63-2000L: Huge demand for US entrepreneur visas
27:11 MFSK32: Closing announcements
28:40 Olivia 64-2000: Bonus mode of the week.
* with image

Please send reception reports to radiogram@...

VOA Radiogram transmission schedule
(all days and times UTC):
Sat 0930-1000 5745 kHz
Sat 1600-1630 17870 kHz
Sun 0230-0300 5745 kHz
Sun 1930-2000 15670 kHz
All via the Edward R. Murrow transmitting station in North Carolina.

The Mighty KBC will transmit a minute of MFSK64 Sunday at about 0130 UTC (Saturday 9:30 pm EDT) on 9925 kHz, via Germany. (It will be a van Gogh painting.) Reports to Eric: themightykbc@...

If you have an Android device, try the beta AndFlmsg app, available from http://www.w1hkj.com/vk2eta/

The Saturday 0930 UTC transmission is now propagating to Japan. See videos at
http://voaradiogram.net/post/118013945737/videos-of-voa-radiogram-on-2-may-2015-from-japan

I continue to be two weeks behind in answering your emails. I'll try to send
out all the galleries for program 109 before the end of Saturday.

Despite the backlog, please tune in and write in this weekend.

Jim. Amtor FEC (broadcast mode) do repeat each character twice and does only 7bit or less. Pactor Fec does full 8bit. Can run all Eu letters, and I remember my old KAM even had an option of increasing the total numbers of repeats to 5 for robustnes, at the cost of trhoughput.

It would have a merit implementing P1 FEC in FLDIGI, since suddenly the fldigi guys can have a common communication platform towards Pactor box operator having only Pactor.
They can use AirMail, the expensive SCS boxes, but also the KAMs from vers 6.1 and upwards and PK232s.

Since fldigi is multiplatform as well, this way there will be established both a platform and hardware independed way of communication to people ONLY having Windows and a Pactor controller.
Actually an option of operating out of ones boxes.

I think Matthews idea is very good.

Let's see... Go to a lot of trouble so that NBEMS can be adulterated by associating with the group recognized worldwide as worst lids in the history of amateur radio, the Winlink group.

We keep hearing about this "good idea" over and over, it keeps getting shot down for the obvious reason, but it appears that the same folks who cannot understand why destroying other hams QSO's by neglecting little details like listening before transmitting never seems to get the message that legitimate hams like the NBEMS folks would not want to associate with lid-ops in order to do something directly contrary to the concept behind NBEMS.

It's like they say... If you have eye trouble, you can get glasses... If your nose is too big, you can get plastic surgery... If your teeth are bad, you can get implants - But there is just no fix for stupid.

One of the best aspects of fldigi and NBEMS is that it fulfills the need for Amateurs to do things the amateur way. And by that, I mean anything but amateurish.

Multi platform, freely available, and non-proprietary, are all huge pluses.

The idea should not be for some guy with a single platform box and some proprietary software to rule the show. The path is cheap and easy and technically adroit to migrate away from that paradigm.

I liken the situation to this. We have this cross platform way of communication. Not much more to say. It works, and its well within the sprit of Amateur Radio.

Proprietary solutions give us stuff like Digital VHF, with different devices that cost a lot of money, but do not communicate with each other.

Michael,

Regarding the "digital mess" on VHF/UHF; that's partly the fault of the manufacturer that chose to write a new digital voice system instead of adopting the one that folks were already using because they didn't like the modulation technique that another manufacturer chose to use. It's also partly because hams want to experiment.

As for the other part, the "proprietary software" in question could well have been used as a template for open source stuff had any developer wanted to work with them on it.

Yup the very definition of commercial and proprietary versus the unstructured environment that allows Hams to communicate when the other systems fall apart. It isn't Yaesu's fault that D-Star has been out for a long time now - 15 years!. But it's a typical problem. Digital VHF is not a good technical solution period. Less range, either there, or not, is not acceptable for emergency comms in my estimation. Some guy with an HT trying to give you ground truth, but no one hears him because his signal is a little weak and the digital repeater won't recognize him is not just bad - its a big step backwards.

Digital is great - an SDR radio is a superior solution - but digital is not the answer to every question. When the wheels fall off, a scratchy signal is better than no signal at all.

NBEMS with the right modes, can do amazing things in the matter of pulling signals out of the noise.

> As for the other part, the "proprietary software" in question could well have been used as a template for open source stuff had any developer wanted to work with them on it.

Problem is - they didn't. And that's probably because they wanted to corner the market. But I don't care about the reason, only the effects. And it remains that they don't talk to each other, making them almost useless in my estimation. A lot of money to talk on one more repeater.

The interoperability simply goes away.

I need to stress: No Pactor modes CAN be run ARQ by sound card due to latency in OSs. I am talking about the FEC options.
The FEC options of most everything CAN be run by sound card on all platforms.
It would be wise to utilize that option. I have earlier been informed that Pactor FEC testings are being done, even in Air Force MARS environmonment if remembering correct.

I would hesitate very much saying that those testers are stupid.
P|1 FEC is even implemented in Multipsk. And is open to my knowledge. Why not in FLMSG?.
Are we not supposed to be communicators across everything when all else fails?

The Flamp manual page 13 discusses using the SAVE button after highlighting the file to be saved. Which saves the file to the C:\, depending on what version of Window is being used, mine is 7. However I am unabel to retrieve it as Documents & Settings will not open. What am I missing?

I had an issue with that a couple versions ago when using fl rig. I ended up finding a corrupt file. running uninstall to remove all versions did not remove that file, I had to go on a manual search (with the help of the built in search feature). Once that was deleted from the folder everything was fine.

P.S.
If I can remember which folder it was in I'll post back

paNBEMS Bulletin Liaison NetMay 31, 2015kb3fxi@...
####
paNBEMS is registered as a participating organization in the upcoming 2015 Great Shakeout, Northeast US earthquake exercise on Thursday October 15, 2015.
The exercise starts at 10:15 AM ET with a simulated Earthquake followed by our start of the paNBEMS digital net at 10:30 am ET.
We will run from 10:30 AM ET until at least noon. The spot will be on our 40m net frequency of 7.0725 USB, 1500 Hz center waterfall (+/- 500 Hz).
All are welcome to participate, especially PA County and Local EOC stations.
-Dave, KB3FXI kb3fxi@yahoo.compaNBEMS Founder and PEMA/ACS Digital Manager
####
kb3fxiAbout paNBEMSMay 31, 2015

paNBEMS was formed as a working group for those interested in the NBEMS (Narrow Band Emergency Messaging System) software.
We currently utilize the latest versions of FLDIGI, FLMSG and FLAMP available at w1hkj.com/download.html
The purpose of the group is to help train those interested in NBEMS for both Emergency Communications and recreational use. paNBEMS also supports the Pennsylvania Emergency Management Agency's Auxilary Communications Service (PEMA/ACS) during weather and other emergency activations.
Our goal is to help anyone, or any group, regardless of affiliation (or lack thereof), to work on training and proficiency with all NBEMS ops.
All are welcome to join us on the air. Here's our net schedules:
 - paNBEMS 40m weekly HF net starts at 11am ET on 7.0725 USB, Olivia 8/500, 1500 Hz center waterfall. Stations are encouraged to have FLAMP open and running as well as having the FLDIGI RxID enabled. Common modes for FLMSG and FLAMP are MFSK-32, MFSK-64 and 5xPSK63R. Mode changes will be automatically detected with RxID (RSID) enabled in the FLDIGI software.
 - paNBEMS 80m weekly HF Net starts at 7:30 PM Eastern Time every Sunday evening with Net Control call on 3.583 MHz USB using 8/500 Olivia, 1500 Hz center waterfall frequency followed by a FLAMP transmission approximately 20 minutes in duration. We will then take calls for FLAMP fills followed by a call for stations with traffic only. After taking stations with traffic, we will open the spot for comments and ragchew.
Backup band/frequencies for paNBEMS are on 30m at 10.135 USB, 1500 Hz center waterfall and 60m (channel 2) 5.3465 USB, with the alternative of 60m (channel 4) 5.3715 USB, both at the required 1500 Hz center freq, and Olivia 8/500 for the initial call.
####
paNBEMS Exercise?May 31, 2015kb3fxi@...
We are setting a tentative date for Saturday September 5, 2015 for a paNBEMS exercise. The goal of the exercise would be to move a large volume of simulated traffic and data files (CSV Spreadsheets and ICS Forms) and to invite the participation of County EOC's throughout PA.
More updates will follow on the paNBEMS nets and on the paNBEMS Yahoo Group email list.
-Dave Kleber, KB3FXIpaNBEMS Founder and PEMA/ACS Digital Manager

From: <k3cc@...>
Topic: 6780 Message: 6780

I have had issues with wraps when being sent during the WX Nets in the winter......

What I was looking for is a way that the WRAP message could be auto saved into the proper form file.....

FLmsg has various form to move messages quickly as BLANK, ICS form etc......
I we made files for each form as C:\USERS\Skip\FLmsgforms\blank, C:\users\skip\FLmsgform\wx etc
could you program the wraps to go into the file named in the FLmsg header when sent as a wrap

06_03_2015_WX or WX_06_03_2015 as a sent FLmsg and retain that name in a FLmsg forms file

During and event handling many WRAPs and EXPORTING them into a file is time consuming...... When the wrap is auto saved you
lose all the header info and have to open each one to find out what was sent

Any one else interested in this ????? Also for the folks that use FLdigi once and a while it would make their learning curve
much easier..... If they have to resend a FLmsg or wrap

I agree with Skip. Although it's most certainly not a deal-breaker, I'd prefer having the original file name restored on autosave. Date and time is always going to be available in the file directory, but we use both date and time and descriptive text in our file naming convention that would indicate the date a message was originated as well as call sign and description. For example:2015_06_06_kb3fxi_kerr_shelter The only way I can see to restore the original file name is to take each individual message, go to file, Wrap, Export and save to a folder. If I get to my shack and there are 30 messages sitting there, that can take some time. -Dave, KB3FXIpaNBEMS

Tnx for the hint,

I was not sure many folks would understand what and how to address the file FLdigi......

When you open FLdigi it has most of the common files... also you can access other directories from
that file.....

This important when you need to find a file that was sent to you and you saved the file as FLAMP, FLmsg or WRAP....

I should add how to read the EXTRACT files created and saved in WRAP

Open FLmsg
click on wrap
click on IMPORT that opens the WRAP files
double click on the file you want
It will appear in the FLmsg file form

The reason for this is to train folks to find and resend files that they saved......

From: David Kleber
Topic: 6790 Message: 6790

Hello all,
PEMA HQ is probably going to do a partial activation of the Emergency Operations Center for severe weather this weekend (June 26/27, 2015).

I'll be working Saturday 10-8 and Sunday 12-6.
With Field Day in progress both days, the HF bands will most certainly be very busy. We'll have a better chance on NBEMS getting through the busy band conditions in the outside chance we have to move any emergency traffic.
Daytime ops on 40m 7.0725 MHz USB, 1500 Hz center and night on 80m 3.583 MHz USB, 1500 Hz center. Both spots +/- 1000 Hz or so.

Howdy Dave,

I've been monitoring on 10.144 USB and playing with FSQCALL every now and then. At this point there are maybe three or four regulars that I see quite often. I guess I've been playing with it for a month or two, now.

I'm up in the air as to how useful it might be for EMCOM. It's named "Fast Simple QSO" but I have seen very little of what I would call QSO's going on. More than anything, it reminds me of Twitter activity, where short messages go back and forth, briefly.

Everybody likes to play with the special feature where your system asks another system how well it hears you, and it gives you a brief answer expressed in db.

I've noticed that the propagation varies there on 10m during the day. Sometimes other stations are very strong, other times its as dead as a post.

To test it as a net application, more guys are going to have to show up and somebody's going to have to attempt to call a net.

As has been the case in the past, I think Andy K3UK's enthusiasm got the best of him though. If there's something outstandingly handy about FSQ from an EMCOM angle, I have not had an opportunity to see it so far.

It's one of those modes like Packet where you pretty well have to announce a frequency and squat on it. It has the "Sounding" feature like ALE. Sounding is kind of a retarded version of the Packet beacon, an information packet is periodically sent out, but unlike Packet, there is no carrier detect or any other way for it to avoid interfering with any ongoing traffic that may be present when it "Sounds". I am not sure why it's called "Sounding" except maybe to give an erroneous impression that it's more modern than a Packet beacon. In reality, it is a dumbed-down version instead.

The guys on the 30m frequency are a great group of hams, nice guys and plenty friendly. My main interest is in watching the software develop, and it has developed quite a bit. You can send either text files or pictures now, though I have not seen any pictures sent so far.

One thing that I have never figured out is that references are made to a "station text" that can be called by other stations, kind of a brag file I guess.- but I have yet to discover how to create that station text.

To be a serious QSO mode, it needs macros. When you run FSQ in FLDIGI, the macro buttons are disabled.

That's about all I know for now. FSQ is still new, still under development, there's going to be changes in the future, I am sure, so it's hard to say what it will be capable of in the long run.

The software has much promise for emcomm world, based on some email with the author I feel that this is one of the goals of FSQcall. My view is that it is a perfect mode for basic everyday communication on a regional basis, not good for long haul communication. The SELCAL features will make it very useful for ARES/RACES nets, etc. It is not particularly useful for some of the activities that FLAMP and FLMSG are used for, because FLAMP and FLMSG can use some modes that are better suited for large file transfers. However now that it is a mode within Fldigi it is tailor made for net activity, then switch to other modes when needed. The "doubling" issue is one that is problematic if you try to stretch to net coverage area, FSQ is better suited for a net where practically all participants can hear each other.

6795. paNBEMS Exercise

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-07-02 17:06:33 UTC
From: David Kleber
Topic: 6795 Message: 6795

Hello all,
We had floated the possible date of Saturday September 5, 2015 for our annual paNBEMS exercise but there were several schedule conflicts.
The paNBEMS exercise will run from 9 AM ET to Noon (possibly longer depending on participation) on our primary daytime frequency of 7.0725 USB, 1500 Hz Center Waterfall.
The goal of the exercise will be to stress our capabilities with NBEMS on a Pennsylvania digital net to see how well we can handle moving massive amounts of data. Another primary objective is to have as many participating liaison stations as possible to help move data to and from the PA statewide HF paNBEMS net and local PA VHF/UHF voice and or NBEMS nets at the local and county levels. Also, participation from stations outside of PA (especially the surrounding states) will be encouraged and welcomed.
There's never going to be a perfect date for everyone who would like to participate. I would like to set a tentative date for Saturday August 29, 2015. I'm interested to know if there are any major events scheduled for this date before we set the schedule.

Thanks, once again, to all those who support, participate in, and monitor the paNBEMS nets!

Hello friends,

If you participated in last weekend's amateur radio Field Day exercise, I hope you had a good time and lots of contacts. Because of travel, I missed Field Day entirely.

This weekend's program includes two gray-scale/grey-scale (black and white) images, because they take less time to transmit. That allowed me more time for the four text news stories, one of them in the rather slow Olivia 32-2000 mode.

Here is the lineup for VOA Radiogram, program 118, 4-5 July 2015, all in MFSK32 except where noted ...

1:32 Program preview
2:48 Christchurch NZ rebuilds after earthquake*
10:39 Rosetta spacecraft finds sinkholes on comet**
16:56 One-person flying vehicles**
22:34 Olivia 32-2000: World's first 3D-printed office building
28:12 MFSK32: Closing announcements
29:08 BPSK63F: Bonus mode of the week.
* with color image
** with gray-scale image

(The closing music is the overture from the musical play 1776, to mark Independence Day in the United States.)

Please send reception reports to radiogram@...

VOA Radiogram transmission schedule
(all days and times UTC):
Sat 0930-1000 5745 kHz
Sat 1600-1630 17870 kHz
Sun 0230-0300 5745 kHz
Sun 1930-2000 15670 kHz
All via the Edward R. Murrow transmitting station in North Carolina.

The Mighty KBC will transmit a minute of MFSK64 Sunday at 0230 UTC (Saturday 10:30 pm EDT) on 9925 kHz, via Germany. Reports for KBC reception to Eric: themightykbc@....

Thank you for your reports from last weekend. Good to hear from several news listeners.

Because of my travel and audience research tasks (which occupy 80% of my work week), I am even further behind in answering your reports. I hope to answer most reports from program 115 today (a holiday, so no distractions from the pesky audience research datasets!).

Hello all, Thanks to all who provided feedback on our proposed paNBEMS Summer exercise date. The paNBEMS Summer Exercise is now scheduled for Saturday August 29, 2015 and will run from 9am ET to Noon on 7.0725 USB, 1500 Hz waterfall center. Backup frequencies are:60m (channel 2) 5.3465 USB, with the alternative of
60m (channel 4) 5.3715 USB, both at the required 1500 Hz center waterfall frequency.30m 10.135 USB, 1500 Hz center waterfall The goal of the exercise is to practice moving large volumes of simulated traffic and data files (CSV Spreadsheets and ICS Forms). All stations are welcome to participate, especially stations in PA and our surrounding states as well as County and Local EOC stations. -Dave Kleber, KB3FXI

6803. SGARN HF Multicast Setback

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-07-10 03:20:26 UTC
From: Charles Brabham
Topic: 6803 Message: 6803

Lightning has zapped the old XP netbook that I have used for a shack computer for years, an Aspire One.

So, it has been replaced by an HP laptop running Win7 64-bit.

Only problem is, all of my ARRL bulletins are from a backup file a couple of months old. The vintage bulletins will be replaced by fresher ones tomorrow. - Today I was doing good to get the system back on the air.

Besides the cute little blue netbook, I also lost a USB soundcard dongle and my 42 year old microwave oven. Everything else seems to be OK, even the HF rigs.

Usually my HF rigs get fried, so I feel like I got off easy, this time.

Ok, Mike. I've never been a big fan of West Mountain Radio.
I'm just interested to know what possible advantage (if any) this would have over a USB Signalink.
I'm a BIG fan of the USB Signalink, BTW.

WT, I think a lot of hams like to do things the hard way. Signalink USB for these types is just too simple... where's the challenge in plugging it in and it just working flawlessly for years without continual intervention and problem solving?

6809. Net Controls Needed for the 1100 Sunday paNBEMS net

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-07-12 03:01:38 UTC
From: W. T. Jones
Topic: 6809 Message: 6809

At the present time there are only 2 net controls for the Sunday 1100hrs 40 Meter paNBEMS net. N3FLL and WN3LIF rotate the net control duties each weekend. That works fine for months with 4 Sundays but some months have 5. N3FLL and WN3LIF are looking for volunteers to take over net control for the last Sunday of the month for months that have 5 Sundays. The task is not difficult and except for a little nervousness no lasting effects have been noticed. The Net Control stations understand that there is a certain amount of trepidation of being a first time Net Control. For that reason one of the regular Net Controls will try to be on frequency to help out until the neophyte gets used to the job.

N3FLL and WN3LIF need some relief from the job as well. It would be good to have a few stations who could step into the job on occasion.

Please consider stepping up and volunteering. N3FLL and WN3LIF will help make it a fun experience.

If no one steps up then months with 5 Sundays may not have a net on the 5th Sunday. So if you like the net and want to see continuity then please consider volunteering. If two people volunteer to be regular net controls then we can rotate with only a Net Control only having one net per month for most months.

Regards,
Frank, N3FLL
WT, WN3LIF

To elaborate on my experience, the rest of the group was well into working digital, while the Bluetooth interface people were still trying to get something to work.

And then it gets repeated on every computer they use.

Bluetooth is a seductive siren, but in the end, is a gorgon.

Or as Dilbert’s boss said, when Dilbert was telling him how difficult it would be to set up a nationwide wireless network, “How hard can it be to not put up wires?”

THe West Mountain products always seemed very expensive for what you
get......
They are overly complex where a simple 2 wire will get you their.....

The cheapest and best before signalink was K4ABT Buck Rogers Rascal
simple to build and cost under $20
it still works today with an internal soundcard in my machine.....

Hi Everyone,

I've noticed that the past few weeks I haven't heard anyone on either the New Jersey or the Pennsylvania NBEMS nets on Sunday morning. Every once in a while I hear a station but I don't get a RxID so I'm not right on the waterfall mark to copy the station. I've heard comments from other Hams in the Philadelphia area say the same thing. I was wondering if it's just the decline of the solar cycle and do you think it will get worse. I'm using a ground mounted vertical antenna and maybe I should start thinking about a dipole so that I can work the closer stations. Maybe even a NVIS antenna.

Ron,
I copied nothing from NJ.

I copied 2 from PA. Just calls; no NCS - Beaver County and
another....possible Cumberland.

I then threw out my checkin a few minutes later.

HRO (Tom) came back to me.

So.......

I tried to check into the net this morning running 300Watts and I had no reply... I saw other western pa stations calling as checkin's
but not heard from the NCS.....
The morning NJ net was the same I could not hear the NCS or any stations from NJ or other areas....

Maybe it time, do to prop. to have 2 nets western and eastern ?????

Did anyone hear me K3CC ???

Hi Skip

I was operating KB3DXU Lycoming County EOC this morning. I heard & decoded you 100%. Heard only a few other stations with varying signal strength. Decoded even less and I Know Olivia will decode signals below the noise level when I can not hear any digital signal.

Earlier I heard N3CRM calling to any NJ Stations. I heard no replys.

In the morning I had no trouble with Central, Eastern or Western Voice nets.

I tried calling during the 11 net and got no indication that I was heard.

My experience over last couple of months shows, increasingly poor conditions as the morning wears on, sometimes to the point of not being able to communicate with anyone. Yet go up to 20 meters and find plenty of activity.

Last winter I had no trouble with 80 or 40 meter voice or digital nets.

Maybe we need to try 20 meters?

I have not been on these nets lately but have been on MARS nets around the same time on frequencies varying between 4 Mhz and 7 Mhz covering NJ and NY. The results have been poor and digital traffic has required several repeats to get to all in the net. So, that old dilemma of which band to reliably use for a 200 mile or so region remains.

I probably should add that 30M seems fairly good for 200 miles or so during
the day time.

6821. Backup Net Freqs Re: [paNBEMS] Sunday Morning NBEMS Nets

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-07-12 19:25:41 UTC
From: David Kleber
Topic: 6804 Message: 6821

https://groups.yahoo.com/neo/groups/paNBEMS/info Backup band/frequencies for paNBEMS are on 30m at 10.135 USB, 1500 Hz center waterfall and 60m (channel 2) 5.3465 USB, with the alternative of 60m (channel 4) 5.3715 USB, both at the required 1500 Hz center freq, and Olivia 8/500 for the initial call. Any stations are welcome to try 20m, but that band, in my opinion, would be a long shot for a statewide net but would likely do better if you wanted to reach stations in Florida. -Dave, KB3FXI

  Hi Skip

I was operating KB3DXU Lycoming County EOC this morning. I heard & decoded you 100%. Heard only a few other stations with varying signal strength. Decoded even less and I Know Olivia will decode signals below the noise level when I can not hear any digital signal.

Earlier I heard N3CRM calling to any NJ Stations. I heard no replys.

In the morning I had no trouble with Central, Eastern or Western Voice nets.

I tried calling during the 11 net and got no indication that I was heard.

My experience over last couple of months shows, increasingly poor conditions as the morning wears on, sometimes to the point of not being able to communicate with anyone. Yet go up to 20 meters and find plenty of activity.

Last winter I had no trouble with 80 or 40 meter voice or digital nets.

Maybe we need to try 20 meters?

According to 'climate scientists', we are going into another Maunder Minimum, which would mean very little sunspot activity for the next few decades, accompanied by a radical temperature drop.

YMMV on the predictions by 'climate scientists'.

NVIS is the way to go for EMCOM, whatever the future sunspot activity may be.

I have a heck of a time with RFI on 40 meters, always have. For this reason and others, I tend to try 30m first, it seems to be the most consistently reliable.

Hey Ron,

I was the NCS this past Sunday for the 40 meter paNBEMS net. I had one check-in from Beaver County, PA. Not much else except the steady drone of static. Prop was listed as only Fair for 40 meters so I kind of chalked that up to the reason for the lack of check-ins. Of course, we are in peak vacation time too.

I am hoping that it gets a little better as time goes on.

Thanks for at least listening. That is appreciated. BTW, I heard nothing out of NJ for their 9:30AM 40 meter net. Propagation seemed to favor the west.

We'll try again next week.

Hi W.T.,

I really enjoy the Sunday nets and for the past few years I've always copied the net very well. You usually have a good signal here in the east. I guess propagation will do that. I'll have to try a NVIS antenna to see how that works. A couple of other guys usually compare notes on the repeater here to compare how we are receiving the nets. Jim, KC3BRA and Bill, WD9EQD and they are having trouble also within the past 3 weeks. We are also having trouble receiving KB3FXI's FLAMP transmission on Sunday evenings. It may be just disruption due to solar flares or something else. We will keep trying.

Thanks, WT.
I might suggest additional tests on our 60m fall back spots as a test in subsequent nets. One thing I'd really like to see, for those of us really interested in Amateur Radio Emcomm, would be that we optimize our stations for NVIS propagation. I'd like for us to explore this idea further, here on the yahoo group and in messaging on the nets, and would welcome suggestions and tips for the best NVIS optimization on 80m, 40m and 30m.

40m and 80m, for NBEMS Digital, have always proven to be our "bread and butter" bands local and regional (out to about 300 miles) for emcomm. I'd like to see if we can optimize our stations for these spots with 30m and 60m for our backup bands and find out what works best.
Years ago, I found a MARS reference article on NVIS dipoles with plans for a reflector element (wire) at a specific length relating to the height of the dipole (13' flat config above ground ?) laying directly below an 80m dipole. That configuration takes up some real estate. Another option is 40/80 trap dipole which I'm very interested in. This might be an option for folks with limited real estate. And for folks with VERY tight restrictions, an NVIS 40m trap dipole might be an option.
I'd like to invite the folks here to offer up some suggestions, comments and feedback on their personal experience with NVIS antennae.
Fire away!

I attended an NVIS session at the Columbus Ohio hamfest yesterday. The Ohio SEC recommended the AS-2259 military antenna cut for 40 and 75 meters for NVIS and also included the parts list for a homemade version. He indicated the height of 12-15 feet was optimum. It appears to be worth looking at and very similar to the MARS example.

Subject: [paNBEMS] paNBEMS Sunday 40 Meter Net at 1100 Eastern

The net will start on 7075.5kHz as per usual at 1100. If conditions are bad and nothing is heard by 10 past the hour then please try 10.135mHz CF 1500. We'll see how it goes there.

Hope to see you on the net....

Hi Guys. Hamilton Co, OH has done a lot of testing and exercises over the last few years with NVIS. Our EMA and a few other county agencies have antenna restrictions. So they are not able to install the proper antennas for the job.
The military style antenna that was shown in Columbus seems to work well. The weakness of the design it the top of the pole where the guys and wires come together. Attention to strength is recommended. We have several operators with home-made ones.

We've also had good luck with dipoles tuned to the proper frequency and hung at a eight to twelve feet above ground level. I have also used an enfed sloped in the correct direction to work Columbus. Our focus has been mainly on 40/80 meters for OH EmComm nets, but I would think the concept could be used for other HF bands.
The idea is to create a "cloud burner" and shoot the RF straight up so it bounces back in close proximity to the transmission point.
Thats been our experience do far.

I have built several of the NVIS antennas "DX ENGINEERING" has a PDF on .... I have not field tested it as of yet; but I ran across another informative improvement to the "Shortened 40/80 meter "X" dipole antenna . Link:
http://arrl-ohio.org/SEC/nvis/Modified%20AS-2259%20NVIS%20Antenna.pdf
http://arrl-ohio.org/SEC/nvis/Modified%20AS-2259%20NVIS%20Antenna.pdf .... I'm considering making one of them and testing it against the one I made without the traps (improvement). My experience said that traps a very narrow band with and full size dipole usually work the best if you have the room for them.

Just another idea to help with the discussion.

I made a version of the as 2239. It is a four pole Nvis and it has served me very well. I have put as low as 5 ft and as high as 31 ft. It is one of my dependable portable field antennas.

Subject: Re: [paNBEMS] paNBEMS Sunday 40 Meter Net at 1100 Eastern

Thanks, WT.

I might suggest additional tests on our 60m fall back spots as a test in subsequent nets.

One thing I'd really like to see, for those of us really interested in Amateur Radio Emcomm, would be that we optimize our stations for NVIS propagation. I'd like for us to explore this idea further, here on the yahoo group and in messaging on the nets, and would welcome suggestions and tips for the best NVIS optimization on 80m, 40m and 30m.

40m and 80m, for NBEMS Digital, have always proven to be our "bread and butter" bands local and regional (out to about 300 miles) for emcomm. I'd like to see if we can optimize our stations for these spots with 30m and 60m for our backup bands and find out what works best.

Years ago, I found a MARS reference article on NVIS dipoles with plans for a reflector element (wire) at a specific length relating to the height of the dipole (13' flat config above ground ?) laying directly below an 80m dipole. That configuration takes up some real estate. Another option is 40/80 trap dipole which I'm very interested in. This might be an option for folks with limited real estate. And for folks with VERY tight restrictions, an NVIS 40m trap dipole might be an option.

I'd like to invite the folks here to offer up some suggestions, comments and feedback on their personal experience with NVIS antennae.

Fire away!

Hopefully this makes it, either on the group or the direct email to you.

The 12 to 15 feet was determined to be the optimum height.

####

paNBEMS Exercise
kb3fxi@yahoo.com

The paNBEMS Summer Exercise is now scheduled for Saturday August 29, 2015 and will run from 9am ET to Noon on 7.0725 USB, 1500 Hz waterfall center.

Backup frequencies are:

60m (channel 2) 5.3465 USB, with the alternative of 60m (channel 4) 5.3715 USB, both at the required 1500 Hz center waterfall frequency.

The goal of the exercise is to practice moving large volumes of simulated traffic and data files (CSV Spreadsheets and ICS Forms).

All stations are welcome to participate, especially stations in PA and our surrounding states as well as County and Local EOC stations.

-Dave Kleber, KB3FXI
paNBEMS Founder

The boys from Chester County EOC did a pretty good job with the conditions as they were. It's amazing how up and down the signals were. Also, there was another net lower in frequency that was very strong. Maybe over modulated because I saw multiple images on the waterfall. They were swamping my receiver even though I had the AGC off. Fortunately W3EOC's signal came up when he called me the 2nd time for my traffic.

6854. 8psk modes again

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-08-12 15:23:10 UTC
From: Michael Coslo
Topic: 6854 Message: 6854

I've been experimenting with the 8psk modes using computer to computer transfer so I don't annoy the bejabbers out of everyone on our repeater.

Textfiles and jpgs work fine. I may have gotten some conflicting advice about database files. A small excel file transferred okay, 100 percent blocks received, but flwrap always reports a checksum error.

So it perhaps doesn't do other then CSV files?

6858. Propagation

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-08-16 20:07:45 UTC
From: Michael Coslo
Topic: 6858 Message: 6858

Good day all,

Propagation so far this summer has been in the dumps it would seem.

But I do have a question for anyone having a Flex radio.

I am seeing a lot of trash all over 40 meters.

It consists of roughly evenly spaced spikes, and spread out below and above the band.

I took a few screen captures of a large view, and two closeups.

I've uploaded them to the group if anyone wants to take a look and analyze them.

A couple of folks i know have had serious issues caused by nearby (within 1/2 mile or so) grow-lights. The ballasts are made in China and are not Part 15 compliant. Also, ARRL has noted that Home Depot is selling fluorescent lamps that have the same problem.

Here's a YouTube showing what a fellow with grow-light interference was hearing. Unfortunately no spectrum display.

Topic: 6860 Message: 6860

----- Forwarded Message -----
From: "ad5xj@... [SATERNSouth]" <SATERNSouth@yahoogroups.com>
To: SATERNSouth@yahoogroups.com
Sent: Tuesday, August 18, 2015 5:30 PM
Subject: [SATERNSouth] Tropical Storm Danny surges to the West and WNW

Well we have Tropical Storm Danny in the South Atlantic moving due West at the moment. The current forecast discussion has Danny moving West today and turning West-NorthWest tomorrow. This is the 5:00 PM AST advisory (abbr.) from the NHC Miami:
DISCUSSION AND 48-HOUR OUTLOOK

At 500 PM AST (2100 UTC), the center of Tropical Storm Danny was located near latitude 10.9 North, longitude 37.5 West. Danny is moving toward the west near 12 mph (19 km/h). A motion toward the west is expected tonight, followed by a turn toward the west-northwest on Wednesday.

Maximum sustained winds have increased to near 40 mph (65 km/h) with higher gusts. Additional strengthening is forecast during the next 48 hours, and Danny is expected to become a hurricane by Thursday.

Tropical-storm-force winds extend outward up to 45 miles (75 km) from the center.

The estimated minimum central pressure is 1008 mb (29.77 inches).
This storm bears some attention due to the far South position. It is far enough South that it just might be out of the general high-pressure steering of our normal summertime pattern winds. Should this be the case and it moves up into the Gulf it could be a much stronger storm as time goes on.If any of you have time to monitor the net frequency this week, there may be a need to assist those who are within the influence of this storm. Please let me know if anyone needs assistance. Be sure that your emergency gear is together and working.

6861. 2015 paNBEMS Exercise

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-08-19 03:14:44 UTC
From: David Kleber
Topic: 6861 Message: 6861

Below is the text from our last Sunday evening 80m bulletin net.
If anyone wants to get some practice in with FLMSG and FLAMP prior to the Saturday Aug 29 exercise, I'll be in and out of the shack tomorrow and Thursday (8/19 and 8/20) as well as the 26th and 27th on 7.0725 USB. If any of our paNBEMS folks can pitch in on the 26th and 27th to monitor for stations who want to help folks practice and test prior to the exercise, your help will be appreciated.
Anyone interested can just put out a call, or better yet, send a short FLMSG message to me on 7.0725 USB, Mode Olivia 8/500, 1500 Hz waterfall center, between 10am and 5pm ET on any of the dates listed above. Or, drop me an email to set a test schedule for any of these days and I'll do my best to meet you on the air.
Prior to the 29th exercise, for those who have good working relationships with their emergency management served agencies (Local/Municipal, or County), please ask that they provide some simulated data transfer requests for the exercise and ask that they observe. Just make sure you set proper expectations for data over HF with practical file size limits, up to around 6K or so, depending on conditions.
Don't oversell NBEMS. We've been working under miserable band conditions, so be prepared to fall back on slower modes and shorter messages if necessary.

paNBEMS Founder

paNBEMS Bulletin Liaison NetAugust 16, 2015kb3fxi@...

####
paNBEMS Exercise and Pre-Exercise Practice Dayskb3fxi@...
The paNBEMS Summer Exercise is set for Saturday August 29, 2015 and will run from 9am ET to Noon on 7.0725 USB, 1500 Hz waterfall center.
paNBEMS ops will be available on 7.0725 USB on Wednesday Aug 26 and Thrusday Aug 27 from noon to 5pm ET for any stations who would like to do some FLDIGI/FLMSG/FLAMP testing.
Backup frequencies for the August 29th exercise are:
60m (channel 2) 5.3465 USB, with the alternative of 60m (channel 4) 5.3715 USB, both at the required 1500 Hz center waterfall frequency.
The goal of the exercise is to practice moving large volumes of simulated traffic and data files (CSV Spreadsheets and ICS Forms).
For those who plan on participating, please make sure you have the current versions of FLDIGI, FLMSG and FLAMP installed and running prior to the start of the exercise. The FREE NBEMS software can be downloaded at:http://w1hkj.com/download.html
All stations are welcome to participate, especially stations in PA and our surrounding states as well as County and Local EOC stations.
-Dave Kleber, KB3FXIpaNBEMS Founder

####

paNBEMS is registered as a participating organization in the upcoming 2015 Great Shakeout, Northeast US earthquake exercise on Thursday October 15, 2015.
The exercise starts on October 15, 2015 at 10:15 AM ET with a simulated Earthquake followed by our start of the paNBEMS digital net at 10:30 am ET.

We will run from 10:30 AM ET until at least noon. The spot will be on our 40m net frequency of 7.0725 USB, 1500 Hz center waterfall (+/- 500 Hz).
All are welcome to participate, especially PA County and Local EOC stations.

6866. Windows 10 audio issue on wiki

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-08-25 03:51:24 UTC
From: Michael Coslo
Topic: 6866 Message: 6866

Good evening all,

There’s an update on the Windows 10 pulse audio issue on the wiki pages at:

https://fedorahosted.org/fldigi/wiki/Documentation/HOWTO/Windows_10_audio_fix

Hope this helps.

-73 Mike N3LI -

6867. Saturday Aug 29, 2015 paNBEMS Exercise Information

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-08-26 19:35:15 UTC
From: David Kleber
Topic: 6867 Message: 6867

This is from the most recent Sunday 80m bulletin transmission...
paNBEMS Bulletin Liaison NetAugust 23, 2015kb3fxi@...

####
paNBEMS Exercise and Pre-Exercise Practice Dayskb3fxi@...
The paNBEMS Summer Exercise is set for Saturday August 29, 2015 and will run from 9am ET to Noon on 7.0725 USB, 1500 Hz waterfall center.
paNBEMS ops will be available on 7.0725 USB on Wednesday Aug 26 and Thrusday Aug 27 from noon to 5pm ET for any stations who would like to do some FLDIGI/FLMSG/FLAMP testing.
Backup frequencies for the August 29th exercise are:
60m (channel 2) 5.3465 USB, with the alternative of 60m (channel 4) 5.3715 USB, both at the required 1500 Hz center waterfall frequency.30m 10.135 USB, 1500 Hz center waterfall
The goal of the exercise is to practice moving large volumes of simulated traffic and data files (CSV Spreadsheets and ICS Forms).
For those who plan on participating, please make sure you have the current versions of FLDIGI, FLMSG and FLAMP installed and running prior to the start of the exercise. The FREE NBEMS software can be downloaded at:http://w1hkj.com/download.html
All stations are welcome to participate, especially stations in PA and our surrounding states as well as County and Local EOC stations.
-Dave Kleber, KB3FXIpaNBEMS Founder

####
paNBEMS 2015 Summer Exercise - Simulated Traffickb3fxi@yahoo.com
Prior to the 29th exercise, for those who have good working relationships with their emergency management served agencies (Local/Municipal, or County), please ask that they provide some simulated data transfer requests for the exercise and ask that they observe.
 Just make sure you set proper expectations for data over HF with practical file size limits, up to around 6K or so, depending on conditions.
Don't oversell NBEMS. We've been working under miserable band conditions, so be prepared to fall back on slower modes and shorter messages if necessary.
-Dave, KB3FXIpaNBEMS Founder
####
paNBEMS 2015 Summer Exercise - EXERCISE ONLY Designationskb3fxi@...
For those planning on participation in the August 29, 2015 paNBEMS Exercise, please be advised to make the following announcement at the beginning and end of any simulated emergency or priority traffic:
EXERCISE MESSAGE. This message is for the purposes of a training exercise. This is Only a Drill.
On the VERY unlikely event that we go live with an ACTUAL Emergency during the exercise, please preface any actual emergency announcements or traffic with:
REAL WORLD... THIS IS NOT AN EXERCISE.
####
End of Bulletin

6868. Re: [paNBEMS] Saturday Aug 29, 2015 paNBEMS Exercise Information

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-08-27 12:01:52 UTC
From: Jim Fisher
Topic: 6867 Message: 6868

What is the protocol for alternate frequency. On this past Sunday, with the horrid conditions on 40, I quickly checked the alternates and saw no activity.

Given the band conditions recently, net may have been moved to an alternate that I still couldn't copy.

My question is, if no copy on 40, should we listen on the alternates, sequentially, in the order that they are shown?

Should we make a call? And if so, what should the call be, in the event that another listening station can relay.

Basically, how to do alternates and when.

Thanks.

Hope none of this comes into play Saturday and we can just have a ball on 40 meters.

6869. re: Last Sunday's Net

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-08-27 13:03:52 UTC
From: <k3cc@...>
Topic: 6869 Message: 6869

Last Sunday I tried to hear anything from the paNBEMS Net......
I was on 40 and 30 meters and called QRZ paNBEMS Net I heard nothing

Frank told me they had one (1) station heard in the Net Barry ....

I was supposed to me the NCS this weekend but Barry will try.......

My thoughts were to have 2 Nets one EAST and one WEST but the condition
out here very so poor , I could not hear the
any stations from the southern area of western PA

I'm on 40 now and the band is dead......7.0725 mhz most days I'm here until
at least 2 PM
for anyone needing help with FLdigi and the messaging systems......

Hope all is better this weekend or time to go to the 2 meter FM internet hi

7.258 Midcars phone net I hear MI station ok but they're having to do relays.
I would guess that 30m would be long but let's give it a try and maybe at noon lets try 60m CH 2.

Ok Dave,

Thanks for trying. I copied you pretty good at first but went down from there. I only got bits and pieces. I'm not sure if you copied me but it looks like I have RF problems with the dipole. It locks up my keyboard. I guess I'll try an isolator to keep out the RF. I saw you say you're headed back to 7.0725 so I'll try it again there.

Dave,

You just faded out to nothing. I'm sure a big part of it is my location. Hopefully someone else will come on for some testing. The good news is Flamp is working so thank you for the test. I'll keep everything on to monitor while I'm out running around. Again, good luck on Saturday.

6877. backup freq protocol

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-08-27 17:24:48 UTC
From: David Kleber
Topic: 6867 Message: 6877

Jim,
We haven't really had a formal protocol in place for switching to backup frequencies, so let me put out the following for debate and consideration...
Monitor the primary frequency for 20 minutes. Do not put out calls, monitor only. If nothing is heard, switch to 60m (channel 2) 5.3465 USB and monitor for 10 minutes. If nothing is heard, switch back to 40m and monitor for 10 minutes. If nothing is heard, switch to 30m 10.135 USB and monitor for 10 minutes. If nothing heard, go back to 40m for the remainder of the daytime and to 3.583 USB for night time operations.
Any thoughts?

Sent: Thursday, August 27, 2015 8:01 AM
Subject: Re: [paNBEMS] Saturday Aug 29, 2015 paNBEMS Exercise Information

What is the protocol for alternate frequency. On this past Sunday,
with the horrid conditions on 40, I quickly checked the alternates and
saw no activity.

Given the band conditions recently, net may have been moved to an
alternate that I still couldn't copy.

My question is, if no copy on 40, should we listen on the alternates,
sequentially, in the order that they are shown?

Should we make a call? And if so, what should the call be, in the
event that another listening station can relay.

Basically, how to do alternates and when.

Thanks.

Hope none of this comes into play Saturday and we can just have a ball
on 40 meters.

Tnx Ron,
I have not seen or heard anything on any band from Dave or you.....
I have to switch xcvrs from the Yaesu Ft1000MP/mkV to the TenTec Orion for
60 meters
I use a 160 meter Off Center Fed antenna at 40 ft and still nothing heard
now SFI 128 A 30 and K5 with a G2/R1 minor storm

From: David Kleber
Topic: 6867 Message: 6880

Well, Jim... that's one of the many reasons that 40m is our primary band for daytime NVIS, but if the band is completely beat, our only other choices are 60m and 30m. If 40m goes long, 60m would seem to me to be our next best bet. I did fairly well with NY3J today on 60m. 30m is usually very long but you never know what conditions will do.
Ultimately, if we had decent levels of participation from stations within and outside of PA, we could handle just about any conditions with relays, such as how they do on SouthCARS, MidCARS and EastCARS, but we have to do our best to work with what we have.

6881. re: Local Nets

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-08-27 19:19:02 UTC
From: <k3cc@...>
Topic: 6881 Message: 6881

With the CME's as they have been maybe it's time to take a long look at other
methods of communication..... Local FM Nets via repeater NOT IRLP....
Section Nets if possible WPA, CPA, EPA and even southeaster PA and
northeaster pa

Each section about 100 miles or less in area.....

If you have noticed the 6 meter band has been working ok, 10 is
dead.....
220 Mhz is one of the best bands there is, why ? 220 has the propagation
of 2 meters and is very quite
as the 440 mhz band point to point it may work for locals as 6 meters

It maybe time to think out of the box and leave HF behind.....

If we could establish VHF communication in local areas via simplex SSB
digital we could encourage more
use of those bands on simplex..... All the newer xcvr's have 6 meters on
the..... The antenna systems are
smaller and more compact..... Verticals are commercially available Comet
and Diamond antennas

Also, the Tech license folks could help with public service events as
paNBEMS.....

Some of my thoughts to expand our system..... The CME's may not go away
anytime soon..... View Space weather or SOHO info

Skip,

I finally caught up with Dave on 40 meters. His signal was good but quickly dropped to nothing. He sent a Flamp message. I needed 4 blocks but the signal was too weak to copy the fills. The good news is I switched from Windows 10 to Linux Mint and Flamp worked. I was having Flamp problems with Windows 10. Hopefully the bands will be better for the drill on Saturday.

6897. 2015 Summer Exercise - Thank You

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-08-29 17:37:04 UTC
From: David Kleber
Topic: 6897 Message: 6897

Hello all,
In spite of the dismal HF conditions over the last several weeks, we got a little bit of a break today, but it still wasn't great.
We moved about 7 FLMSG messages, 2 1k FLAMP files, a 2k FLAMP file, and we had 6 EOC stations participating.
The relay help was fantastic and the poor conditions provided some good practice in that regard.
I want to thank those who participated in or monitored the exercise.
We learn a lot every time we do these drills.
I'll be broadcasting a report on the exercise tomorrow night for the paNBEMS Sun eve Bulletin/Liaison net on 3.583 USB, 1500 Hz center waterfall.
It would be great to have some liaison stations send brief reports on their participation in the exercise after the Bulletin tomorrow night. It's always much more fun receiving reports via RF.

6898. Summer Exercise de n3fll

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-08-29 18:22:38 UTC
From: n3fll@...
Topic: 6898 Message: 6898

The conditions were better than they have been in a few weeks/months.

I had excellent copy on stations in C Pa and W Pa. Began loosing C Pa
around 11AM.
I copied all Flmsgs and Flamp messages. During the last Flamp using
5XPSK63R another station started to transmit and switch me to Olivia,
so only for that reason I missed a few blocks before getting switched back.
I copied NY3J Ron in E Pa through the complete net even with a weak signal. I
also copied W3LUZ and is Flmsg 100%.
I now wish I had created a few simulated messages to send but hopefully
we'll do this next year. Maybe a late winter exercise.

Give the Sunday paNBEMS net a try tomorrow, K3EUI Barry will be making
his first solo appearance as NCS. I hope the band co operates and he gets
some check ins.

I copied 2 flmsgs - first one, minor earthquake had checksum errors,
the second, Potter Co Situation reply, all good. The Potter county may
have been copied at 2250 during a relay section.

I couldn't copy the flamp. Never engaged the program, as if it didn't
get the header.

Gave up at around 11:30, came back later and caught the end at about
12:40. Wish I would have hung in there.

I am in Montgomery County. EPA.

Looking forward to the Sunday net, as I always do. Thanks for all the
work that goes into this.

I reiterate, THANKS FOR ALL THE WORK.

Dave,

Good job on the exercise keeping it all together. It was quite a challenge for you with band conditions. I was glad I could help in a small way being able to relay a few times. I copied you as NCS very well but it seemed there was no real direction on the stations that I could work.

I was able to relay K3CC in Potter County and K3PSG in Butler County. The first time you sent the Flamp file I failed to receive the header even though your signal was good. When I restarted Flamp I was able to copy the next time you sent the Adams Hospital Drug Report and that counted as a relay to the Philadelphia area which gave me a good feeling of accomplishment. Being the relay station and moving 2 stations off the NCS frequency reminded me of the CW nets where two stations are paired up and moved to another frequency to pass the traffic and then back to the NCS frequency for further instructions. It worked flawlessly.

The interesting part is being able to copy you but not the Chester County EOC station which is about 36 miles. I guess I need to try NVIS for future drills.

Thanks for you efforts Dave. To me it was a successful exercise.

Dave et al,

The paNBEMS exercise was a success as far as I was concerned. It was my 3rd exercise of the week and certainly the most fun.

I did have some technical difficulties at the start. The first was the fact that the computer at the EOC has 2 Signalinks attached to it. When I started Fldigi it wanted to grab the Signalink for the APRS system. It was a quick fix but confused me for a few minutes. The other "oops" was fldigi's RSID was configured to switch to the frequency of the RSID tone. When you sent NY3J up to 2250 my fldigi dutifully followed them. Again, I knew what the issue was and quick corrected it but I had missed the start of your next Flamp transmission. So now I am sure that the equipment at the Luzerne County EOC is configured.

When you asked for the shelter status I had the County EMA Director standing behind me. I asked her if she wanted a quick job and she willingly volunteered to make a spreadsheet of some of the shelters and put it on a network share for me to access. I had to back her off. She gave me a spreadsheet with ALL the shelters in the county. It would have taken 46 minutes on MFSK32 to send it. So I amended it slightly to fit the exercise limits.

She wanted to do something else so I put a copy of flmsg on her system in her office and she filled out a quick Red Cross Disaster Assessment. I managed to send that to W3EOC (tnx Frank!) for the exercise.

I was able to hear all the stations even though K3PSG was a tad weak. His signal was still producing output and only one message had a checksum error but it was still was intelligible enough to make sense of it.

All the stations deserve a pat of the back for their efforts. It was a good exercise and one that we need more of.

73!

Regards,

W.T.

Well Folks it's over ! What fun !
Ole' Sol' helped me a bit. I copied mostly everyone 100%...I have all the FLAMPs and FLmsg/Wraps

My question to Dave was that with all the wraps incoming it would be difficult to know what was in each
extract if I needed to export one.... Converting a FLmsg ICS to FLAMP was very easy....I took the FLmsg,
highlighted the text and copied it into "notepad" and entered the file in FLAMP... I wonder if there is an easier
way to do the same....

All stations were manned with FB op's, traffic flowed smoothly via the NCS and Relays..... We could not have asked for more
\well maybe more EOC participation. I did answer a few emails while on the air .....KB3UHX, VE3FAL/CW649 they were
listening to the Net.....

Tnx to all that were there and I was great well executed......
Congratulations' to all

Dave,
Good job Dave!

I was at Butler County EOC K3PSG, about 15 miles apart and could not copy you. Your S/N was -14 no readable text! The relays worked well, move to 2250 was good idea. Since we had multiple operators we where able to copy 1300 and 2250 at the same time. We copied the Central and East stations with some QSB which corrupted the FLmsg's using MSFK, Olivia work right through the fades. We had poor copy on the PSK63RC5 transmissions.
In hind sight it may have been faster to send all the FLmsg formated traffic with FLamp using small blocks instead of sending with FLmsg multiple times, requiring only the missed blocks being sent.

Thanks to all from the Butler crew.

Hi Skip,
To send a FLmsg using FLamp try:

Composing or Opening it in FLmsg then do a file -> save, then just hit
add in FLamp, navigate to the file, click OK to add it to the TX queue.

The receiving station saves the file with FLamp, then just right clicks
the file and choose 'open with' flmsg or do a file -> open in FLmsg.

Works for me and maintains the original file name and all formating.

If you want to test it on air, drop me a line off list, and we can make
a sked.

KY3ARS in York Co. was only able to copy a few of the stations. We are limited to using a folded dipole for an antenna of HF. We also had a tech/operator problem not long after initial contact. Our laptop does have a good battery and the power cord was accidently disconnected and the system had to be rebooted. During this time we assume you must have changed modes and we could not copy anything even though we were receiving a good signal. Lot of head scratching for about 20 minutes. NCS finally went back to Olivia and we started coping again. We always had a good copy on KB3FXI and NY3J. We believe it would be a good thing for paNBEMS to create a list of what modes paNBEMS would like to be used for HF and also from VHF/UHF. Creating a standard would bring some clarity and give everyone an idea of what modes to practice with. We have never used the 5xpsk63r or the mfsk32 modes before.!!!

Subject: Request for Amateur Radio help during Pope's visit

A Request for Capable and Willing Amateur Radio Operators to assist with Communications Duties during the upcoming Papal Visit to Philadelphia.
The 2015 World Meeting of Families will be held in Philadelphia during the week of September 21st through the 27th. This event will have thousands if not millions of visitors coming to Philadelphia especially on the final weekend of September 26th and 27th. Pope Francis will be in Philadelphia for the Papal Visit on that weekend.
The Emergency Management Agencies of the counties surrounding Philadelphia have asked for Amateur Radio support on the 26th and 27th to assist with insuring the safety of all the visitors that will be traveling through their counties on the way to visit Philadelphia during this momentous occasion.
The task will require more operators than the ARRL Amateur Radio Emergency Services (ARES) Teams in those counties can field and for that reason the Eastern Pennsylvania Section is coming to all Amateur Radio Operators in Eastern Pennsylvania. The request is simple and if you can meet the following requirements the ARES Teams could use your help.
The requirements are:
- Be able to walk and be on your feet for extended periods of time.
- Fairly good physical condition.
- Have your own equipment including an Handie-Talkie (HT), batteries for at least 12 hours, charger, etc. You will be moving so fixed stations are not a requirement.
- Valid Amateur Radio License.
- Be able to travel to the Philadelphia area on September 26th or 27th.
- Identification and other items.
- Be able to work a 12 hour shift either day or both.
- Radio operating experience including tactical operating on crowded frequencies and working with a net control station.
- Pluses would include
  - Camping equipment
  - Food for 2 days
  - An understanding of the Philadelphia and outlying counties

If you can meet these requirements and are interested in volunteering for what would be a once in a lifetime experience please send an email to the following email address listing your name, call, telephone number, availability, and capabilities.

sec@...
The expected duty would be monitoring traffic, rail stations, and other facilities. The essential details will be provided to those that meet the requirements and are selected to participate.
Volunteering does not guarantee you a slot in this operation. We are collecting resources at this time. You will be contacted for a phone interview after your email is received to determine if you are one of those that can help during this great event.

paNBEMS Bulletin Liaison NetSeptember 6, 2015kb3fxi@...

####
paNBEMS 2015 Summer Exercise - Looking Backkb3fxi@...
The paNBEMS Summer Exercise took place on Saturday August 29, 2015.
We had participation from 6 Pennsylvania County EOC stations as well as several other home stations who checked in and helped with relays. At least 6 FLMSG messages were successfully sent and received as well as about 3 FLAMP file transfers.
40m band conditions during the exercise were poor to fair (at best). The challenging conditions provided us with the perfect opportunity to see how we could work together to make the best of the situation.
Our objectives were to have participation from volunteers at Pennsylvania County EOC stations; to work relays to and from stations in skip zones; to have EOC stations send simulated situation reports and other data; to hand off NCS duties from the primary NCS to back up NCS operators; to utilize the bandpass with specified stations to handle data transfer above or below the primary net control waterfall spot; and to learn and have fun.
One of the biggest challenges with these nets is following the direction of NCS. At one point in the drill, we handed off NCS from primary to another NCS volunteer. NCS was calling for EOC stations only, but was getting general check ins and a good deal of time was wasted trying to confirm or deny if the responding stations were actually directly serving an EOC.
We hoped to have more simulated traffic from the EOC stations but we had a plan to request information. One request from NCS to an EOC was to have them check in on their local repeater and get vehicle traffic information from any mobile stations on primary roadways and that request was fulfilled. Another request was measured weather data from a weather station closest to their location and that request was fulfilled as well.
This was some great feedback from W3LUZ/WN3LIF:
"When you asked for the shelter status I had the County EMA Director standing behind me. I asked her if she wanted a quick job and she willingly volunteered to make a spreadsheet of some of the shelters and put it on a network share for me to access. I had to back her off. She gave me a spreadsheet with ALL the shelters in the county. It would have taken 46 minutes on MFSK32 to send it. So I amended it slightly to fit the exercise limits."
"She wanted to do something else so I put a copy of flmsg on her system in her office and she filled out a quick Red Cross Disaster Assessment. I managed to send that to W3EOC (tnx Frank!) for the exercise."
It's great to see that the EMA in Luzerne had the opportunity to interact and to learn more about our capabilities and limitations. This was another major objective in the exercise. Great work, WT!
Thanks again to all those who helped out and special thanks to the EOC/EMA personnel who took the time out to observe our capabilities.

6909. Big NBEMS News! - Formal release of AndFlmsg V1.2.0 for Android - Flmsg with Fldigi modems

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-09-10 14:39:29 UTC
From: David Kleber
Topic: 6909 Message: 6909

Dear OMs,
I have uploaded the first formal release of AndFlmsg for
Android to http://w1hkj.com/vk2eta:
- App executable (.apk) Version 1.2.0- App source
- Quick Start guide
- User manual
- Readme_first.txt
- Install.txt

Extract form Readme_first.txt:
The main objective of this development is to provide a low power highly-portable, as in mobile or backpack, Flmsg/Fldigi solution.
Rigs like the Yaesu's FT-817, Icom's 703 and Elecraft's KX3 would be the typical companions of the Android phone or tablet running AndFlmsg, thereby providing a low weight, low energy requirement, access to most Flmsg services.
The integration of Internet sharing/forwarding makes this solution attractive as a relay option, possibly a mobile or portable station in a pertinent geographical location.
The inclusion of modes like MT-63 and long interleave MFSK modes allows audio coupling to be used effectively without the need for an audio interface.
The addition of images and GPS data inclusion opens the usage to practical field reporting too.

All the best,
73, John (VK2ETA)

The beta has been working great for me in the mobile, so I can only imagine this release will be even better.

It's a "must have" for digital enthusiasts.

http://w1hkj.com/vk2eta/README_FIRST.TXT

Hello dear OMs,

This app is a combination of Fldigi and Flmsg for portable devices running Android.

The main objective of this development is to provide a low power highly-portable, as in mobile or backpack, Flmsg/Fldigi solution.

Rigs like the Yaesu's FT-817, Icom's 703 and Elecraft's KX3 would be the typical companions of the Android phone or tablet running AndFlmsg, thereby providing a low weight, low energy requirement, access to most Flmsg services.

The integration of Internet sharing/forwarding makes this solution attractive as a relay option, possibly a mobile or portable station in a pertinent geographical location.

The inclusion of modes like MT-63 and long interleave MFSK modes allows audio coupling to be used effectively without the need for an audio interface.

The addition of images and GPS data inclusion opens the usage to practical field reporting too.

In a more developed configuration, for example with a 10” tablet connected to a Bluetooth or USB keyboard plus mouse, and maybe also with an audio interface, the operation we get, including data input, nears the performance and practicality of a laptop configuration but without the power consumption and cost of the later.

Also, the data entry forms can be re-modeled independently of the display forms in order to match the screen real-estate of the target devices.

What does it do?

Basically most of what the fully featured version on the PC does.

- Receive Flmsg formatted messages (any Form).

- Forward any form message as-is over the radio in Flmsg format OR over the internet via email, instant messaging (Facebook, Tweeter, ...) or cloud services (Dropbox, Google drive...), print services (E.g. Google Cloud Print).

- Copy and edit received messages for replying or further forwarding (all custom forms plus the following “hard coded forms”: Blank form, Radiogram, IARU message, Plaintext, CSV, all ICS and HICS forms at present, plus the “Picture Form”).

- Create new messages using any custom forms or the current set of "hard coded” forms.

- Send created messages over the radio or internet.

- Define and save templates for facilitating the creation of new messages.

- Consult the activity log and the messages as-sent.

- The implemented modems are the FLMSG modems (including extra modes), that is all PSK/PSKR modes, including multi-carrier modes, some of the 8PSK modes, THOR, MFSK, OLIVIA, MT-63 and Domino-Ex modes. The performance is good as the modems now coded in native C++ code for performance and is heavily based on the Fldigi modems code.

Enjoy.

All the best,

73, John (VK2ETA)

http://w1hkj.com/vk2eta/README_FIRST.TXT

Hello dear OMs,

This app is a combination of Fldigi and Flmsg for portable devices
running Android.

The main objective of this development is to provide a low power
highly-portable, as in mobile or backpack, Flmsg/Fldigi solution.

Rigs like the Yaesu's FT-817, Icom's 703 and Elecraft's KX3 would
be the typical companions of the Android phone or tablet running
AndFlmsg, thereby providing a low weight, low energy requirement,
access to most Flmsg services.

The integration of Internet sharing/forwarding makes this solution
attractive as a relay option, possibly a mobile or portable station

in a pertinent geographical location.

The inclusion of modes like MT-63 and long interleave MFSK modes allows audio coupling to be used effectively without the need for an audio interface.

The addition of images and GPS data inclusion opens the usage to practical field reporting too.

In a more developed configuration, for example with a 10” tablet connected to a Bluetooth or USB keyboard plus mouse, and maybe also with an audio interface, the operation we get, including data input, nears the performance and practicality of a laptop configuration but without the power consumption and cost of the later.

Also, the data entry forms can be re-modeled independently of the display forms in order to match the screen real-estate of the target devices.

What does it do?

Basically most of what the fully featured version on the PC does.

- Receive Flmsg formatted messages (any Form).

- Forward any form message as-is over the radio in Flmsg format OR over the internet via email, instant messaging (Facebook, Tweeter, ...) or cloud services (Dropbox, Google drive...), print services (E.g. Google Cloud Print).

- Copy and edit received messages for replying or further forwarding (all custom forms plus the following “hard coded forms”: Blank form, Radiogram, IARU message, Plaintext, CSV, all ICS and HICS forms at present, plus the “Picture Form”).

- Create new messages using any custom forms or the current set of "hard coded” forms.

- Send created messages over the radio or internet.

- Define and save templates for facilitating the creation of new messages.

- Consult the activity log and the messages as-sent.

- The implemented modems are the FLMSG modems (including extra modes), that is all PSK/PSKR modes, including multi-carrier modes, some of the 8PSK modes, THOR, MFSK, OLIVIA, MT-63 and Domino-Ex modes. The performance is good as the modems now coded in native C++ code for performance and is heavily based on the Fldigi modems code.

Enjoy.

All the best,

73, John (VK2ETA)

Alrightly, then. We just do it on the internet?

I'm running AndFLMSG on an old Galexy 3 smart phone and you can run this on the cheap $79 tablets or a smart phone WAY longer than you could run on most laptops. In fact, I bet you could put together a relatively inexpensive kit with an HT, tablet and a small solar panel and battery and run almost indefinitely.

Where I see the most practicle use here would be mostly for receiving bulletins and messages with nothing more than a smart phone and a VHF/UHF mobile or handheld transceiver. Imagine no internet and phone service and you're deployed to a shelter. On the way, you could have your smart phone somewhere near your radio speaker and recieve all the data on an incident you need without having to do anything but drive. Then when you get to the scene, you review the recieved data.

As far as the internet goes.... well, have at it when it's working. I'd suggest just doing email with file attachements. No need in reinventing anything there.

I'm sure we'll have folks coming out of the woodwork to find reasons that AndFLMSG isn't a good solution. Same thing happened with NBEMS in the early days.

Hello dear OMs,

This app is a combination of Fldigi and Flmsg for portable
devices
running Android.

The main objective of this development is to provide a low
power
highly-portable, as in mobile or backpack, Flmsg/Fldigi
solution.

Rigs like the Yaesu's FT-817, Icom's 703 and
Elecraft's KX3 would
be the typical companions of the Android phone or tablet
running
AndFlmsg, thereby providing a low weight, low energy
requirement,
access to most Flmsg services.

The integration of Internet sharing/forwarding makes this
solution
attractive as a relay option, possibly a mobile or portable
station
in a pertinent geographical location.

The inclusion of modes like MT-63 and long interleave MFSK modes allows
audio coupling to be used effectively without the need for an audio
interface.

The addition of images and GPS data inclusion opens the usage to
practical field reporting too.

In a more developed configuration, for example with a 10” tablet
connected to a Bluetooth or USB keyboard plus mouse, and maybe also
with an audio interface, the operation we get, including data input,
nears the performance and practicality of a laptop configuration but
without the power consumption and cost of the later.

Also, the data entry forms can be re-modeled independently of the
display forms in order to match the screen real-estate of the target
devices.

What does it do?

Basically most of what the fully featured version on the PC does.

- Receive Flmsg formatted messages (any Form).

- Forward any form message as-is over the radio in Flmsg format OR over
the internet via email, instant messaging (Facebook, Tweeter, ...) or
cloud services (Dropbox, Google drive...), print services (E.g. Google
Cloud Print).

- Copy and edit received messages for replying or further forwarding
(all custom forms plus the following “hard coded forms”: Blank form,
Radiogram, IARU message, Plaintext, CSV, all ICS and HICS forms at
present, plus the “Picture Form”).

- Create new messages using any custom forms or the current set of
"hard coded” forms.

- Send created messages over the radio or internet.

- Define and save templates for facilitating the creation of
new
messages.

- Consult the activity log and the messages as-sent.

- The implemented modems are the FLMSG modems (including
extra modes),
that is all PSK/PSKR modes, including multi-carrier modes,
some of the
8PSK modes, THOR, MFSK, OLIVIA, MT-63 and Domino-Ex modes.
The
performance is good as the modems now coded in native C++
code for
performance and is heavily based on the Fldigi modems code.

Enjoy.

If the internet is working, then ham radio emcom is superfluous.
Filtering internet communications through ham radio software is not
emcom, it's just slowing normal communications down to no particular
purpose.

When the internet is down, RF is everything.

You need to think in the box. - As a ham.

A good slug of common sense would not hurt anything, either.

An internet only solution is not a Amateur radio solution. That's for IT people, not for Hams.

From: Michael Coslo
Topic: 6913 Message: 6917

I have no reason to think it won't work.

But is it possible we are getting to a Rio Grande point - that of being a mile wide, and an inch deep?

This is a great application! Thanks to everyone who has put energy into making this work.
As an ARES EC I have been working with my group to find a way that most hams can easily "get on digital" without an investment or a lot of training. It sounds like this may fit the bill.
I save all of my old working DROID phones for this reason. Connecting to a WIFI connection you can configure the phone with the needed apps. Just keep a valid Google account on it. I currently use this config to use APRS.
Hopefully I'll be able to test more soon and give further comments on the practical use.
Looking forward to it.
Thanks again for sharing!

Are you all on now? Nothing heard on 3583 KHz.

Thanks!
Patrick

6924. Broadcast message replies

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-09-15 04:18:47 UTC
From: n3rdv@...
Topic: 6924 Message: 6924

Our club is running some training sessions to get more digital operators. The question came up on what happens in the following FLMsg scenerio:

Net control sends a broadcast ics-213 out to multiple stations. The form was have questions like -

1) How may cots are available at your location?
2) How many respirators?
3) How many free ICU beds?

The recipients would all use the REPLY tab and send their info back to NCS. Question is - how will the replies be stored at NCS? I'm thinking they will all have their own unique file names with no saved replies being overwritten. Your thoughts? Thanks in advance.

6925. Re: [paNBEMS] Broadcast message replies

THe FLmsg would be stored as a FLwrap if you have selected that option. The FLmsg could be store as a File Name that you select, if you have the FLmsg form opened.....

Subject: [paNBEMS] Broadcast message replies

Our club is running some training sessions to get more digital operators. The question came up on what happens in the following FLMsg scenerio:

Net control sends a broadcast ics-213 out to multiple stations. The form was have questions like -

1) How may cots are available at your location?

2) How many respirators?

3) How many free ICU beds?

The recipients would all use the REPLY tab and send their info back to NCS. Question is - how will the replies be stored at NCS? I'm thinking they will all have their own unique file names with no saved replies being overwritten. Your thoughts? Thanks in advance.

Amateur radio operators do not (by the FCC definition) broadcast.

We multicast, we beacon, we hamcast, we sound - but we do not broadcast.

Talking about broadcasting on the ham bands will create confusion - and
there are many who are easily confused - and sooner or later this will
lead to unwanted attention.

Just saying... Find another descriptive. - My favorite is "hamcast" as
it is most accurate and least ambiguous.

A "broadcast" is to the general public, a QST is a message for all amateurs.

Thanks Skip - so my thoughts that Flmsg would save each response with the default date/time format file name OR a name of the operator's choosing if they don't want the default, matches what you're saying.

As for the other replies - it seems I should have been more careful on my word selection - I should have never mentioned the "B' word.

6929. Pope visit on HF?

Hello PA.
Will there be any active HF traffic that can be monitored from the Cincinnsti OH area? I'm thinking ham or public safety net activity as opposed to military stuff. If so, can someone post them?
Interested in listening to what I can from afar.
Thanks.
Be safe!

6932. Papal Visit - paNBEMS HF Operations

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-09-22 21:12:10 UTC
From: David Kleber
Topic: 6932 Message: 6932

Hello all,

I got word from PEMA regarding the Papal visit and we will have paNBEMS in standby mode for the following timeframe:

9/25/15 1800 ET
9/28/15 1600 ET

Daylight: 7.0725 MHz USB, 1500 Hz Center Waterfall, Olivia 8/500 call mode and MFSK-32 for larger FLMSG messages or FLAMP files
Night: 3.583 MHz USB, 1500 Hz Center Waterfall, Olivia 8/500 call mode and MFSK-32 for larger FLMSG messages or FLAMP files

While we're in standby operations mode, please leave a little longer breaks than usual in between transmissions and listen a little longer before calling.

If we're asked to fully activate, I will post any announcements here on the list and on the air.

Thanks.

-Dave Kleber, KB3FXI
paNBEMS Founder and PEMA/ACS Digital Manager

Here's the details on the Pope's Schedule in Pennsylvania
(from: "http://www.cbsnews.com/news/pope-francis-schedule-for-united-states-visit/"):

SATURDAY, SEPT. 26: New York City, Philadelphia

8:40 a.m. Departure from John F. Kennedy International Airport
9:30 a.m. Arrival at Atlantic Aviation, Philadelphia
10:30 a.m. Mass at Cathedral Basilica of Sts. Peter and Paul, Philadelphia
4:45 p.m. Visit to Independence Mall
7:30 p.m. Visit to the Festival of Families Benjamin Franklin Parkway

SUNDAY, SEPT. 27: Philadelphia

9:15 a.m. Meeting with bishops at St. Martin's Chapel, St. Charles Borromeo Seminary
11:00 a.m. Visit to Curran-Fromhold Correctional Facility
4:00 p.m. Mass for the conclusion of the World Meeting of Families, Benjamin Franklin Parkway
7:00 p.m. Visit with organizers, volunteers and benefactors of the World Meeting of Families, Atlantic Aviation
8:00 p.m. Departure for Rome

Another good web site for the Papal Visit is:

http://www.papal511.com/

This one is especially good if you plan to be in the Philadelphia and want to find things during the Papal Visit or, more so, want to avoid things.

Regards,

W.T.

6935. No Bulletin/Liaison Net - Sept 27, 2015

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-09-27 02:21:24 UTC
From: David Kleber
Topic: 6935 Message: 6935

Due to the Papal Visit in Philadelphia we will not be conducting the paNBEMS Bulletin/Liaison net Sunday September 27, 2015.
The net will resume Sunday evening at 7:30 PM ET on October 4, 2015.
-Dave Kleber, KB3FXIpaNBEMS Founder
Group Description
paNBEMS was formed as a working group for those interested in the NBEMS (Narrow Band Emergency Messaging System) software, using the latest versions of FLDIGI and FLMSG. The purpose of the group is to help train those interested in NBEMS for both Emergency Communications and recreational use.
Our goal is to help anyone, or any group, regardless of affiliation (or lack thereof), to work on training and proficiency with all NBEMS ops.
Using the NBEMS software requires nothing more than a laptop or desktop computer and a transciever (even an HT) to send and receive data/text using the free and open source NBEMS soundcard-based digital software.
Feel free to use this group for setting test schedules and sharing experiences and results with the NBEMS software.
Here's our net schedules:
- paNBEMS 40m weekly HF net starts at 11am ET on 7.0725 USB, Olivia 8/500, 1500 Hz center waterfall. Stations are encouraged to have FLAMP open and running as well as having the FLDIGI RxID enabled. Common modes for FLMSG and FLAMP are MFSK-32, MFSK-64 and 5xPSK63R. Mode changes will be automatically detected with RxID (RSID) enabled in the FLDIGI software.
- paNBEMS 80m weekly HF Bulletin/Liaison Net starts at 7:30 PM Eastern Time every Sunday evening with Net Control call on 3.583 MHz USB using 8/500 Olivia, 1500 Hz center waterfall frequency followed by a FLAMP transmission approx 20 min in duration. We will then take calls for FLAMP fills followed by a call for stations with traffic only. After taking stations with traffic, we will open the spot for comments and ragchew.
Backup band/frequencies for paNBEMS are on 30m at 10.135 USB, 1500 Hz center waterfall and 60m (channel 2) 5.3465 USB, with the alternative of 60m (channel 4) 5.3715 USB, both at the required 1500 Hz center freq, and Olivia 8/500 for the initial call.
We recommend the use of RSID (both TxID and RXID).

| #ShakeOut |

| View this email in your browser |

|

|

|
|
|
|
| |

|

|

|
|
|
|
| Dear David, |

|

|
| ShakeOut is next week! Everyone, everywhere should know how to protect themselves from earthquakes, so be sure you are talking it up in-person, on social media, and all around town. Your participation in #ShakeOut will inspire others to get prepared, making the world a safer place!

Where will you be Thursday at 10:15 a.m.? If you need to make updates to your drill plans, log in to your account to update them. While most will participate on 10/15 at 10:15 a.m., you or your organization can participate on any day in 2015. |

|
| NorthEast ShakeOut Update
320,000 Participants
Registered So Far |
| ShakeOut Tip: After you complete your drill,
log in for your certificate of participation!
|

|

|

|
| It is also a good time to encourage others to register still, by sharing ShakeOut.org

with them no matter where they live! |

|

|
| And Are You Really Registered? Log In to Make Sure! |

|

|
| |

|

|
| Stay Safe: Red Cross' Emergency App |

|

|
| The American Red Cross, a major ShakeOut partner, has come out with their newest app covering all hazards: the Emergency App. You can monitor alerts for any area and loved one, stay in touch with them through the app, find shelters nearby, and even test your knowledge on emergency topics. And, everything is available in Spanish too! |

|

|
| |

|

|
| |

|

|
| Tools for Now Until ShakeOut Day |

|

|
| Most are busy learning how to live on top of rocks, but if you have been living under one, you might have missed the past few email updates on how you can make your drill bigger and better. Here are a few key tips and resources you can still use though!

- Add your event to the ShakeOut events calendar if your drill will be open to the public or suitable for media coverage. You can also email your media advisory to us to have it listed on the ShakeOut news page.

- Put ShakeOut in your own calendar too, at 10:15 at 10:15 a.m., by downloading the invite.

- Download an audio narration for your drill ahead of time (recommended) or stream from YouTube to play during your drill

- Learn how to Drop, Cover, and Hold on various situations with Recommended Earthquake Safety Actions Guide and the Earthquake Safety Video Series. |

|

|
| |

|

|
|
| |

| - Place graphics on your website or email signature, stick flyers and posters around the office/your favorite coffee shop/kitchen fridge, and get more ideas at ShakeOut.org/northeast/resources.

- Use the 2015 Social Media Messaging guide to help promote your drill and inspire others to participate. Don't forget to use #ShakeOut on all posts!

- See who else is participating and if you can coordinate your drill! |

|

|

|
| |

|

|
| "Beat the Quake" Game Update |

|

|
| Hold a competition with your family and office by seeing who scores the highest! Fire safe actions have now been added to the Beat the Quake game. |

|

|
| |

|

|
| |

|

|
| Thank You for Making it Happen |

|

|
|
| |

| Over 39 million people are registered to participate in Great ShakeOut Earthquake Drills in 2015. More than 34 million of them will be holding their drill right on 10/15 at 10:15 a.m.! Your participation counts in a total that exemplifies the power of coming together and improving our safety so we can all prepare to survive and recover from the next damaging earthquake. We're all in this together! Pictured: ShakeOut Leadership Summit, at the Los Angeles Fire Department, for National PrepareAthon! Day on 9/30. |

Louisa County Schools Take Action to Prepare

| | | After an unexpected earthquakedestroyed a school in Louisa County, VA, school administrators took action tokeep students, faculty, and staff safe in the future. Read theirstory today! |

| | | back to top |

Join The Great ShakeOut Tomorrow
The Great ShakeOut is tomorrow! Register today to join more than 22million people from around the globe as they Drop, Cover, and Hold On at 10:15 AM local time to practice how torespond to an earthquake. Practicing these steps is just one of the ways youcan prepare for tremors.Example of How to Drop, Cover, and Hold On
As with any disaster, there are several things youcan do to be safe. The EarthquakeCountry Alliance (ECA) provides details about what to do before, during, andafter an earthquake to

protect yourself and your family.ECA’s Seven Steps to Earthquake Safetywill teach you how to survive and recover wherever you live, work, or travel.The steps are:
- Secure Your Space
- Plan to be Safe
- Organize Disaster Supplies
- Minimize Financial Hardship
- Drop, Cover, and Hold On
- Improve Safety
- Reconnect and Restore

To learnmore about these steps, visit the ECA website.

National Cyber Security Awareness Month
October isNational Cyber Security Awareness Month (NCSM). The Department of Homeland Security (DHS) sponsors this annualinitiative to educate the public about cybersecurity and increase nationalresilience for cyber incidents. Cybersecurityis a shared responsibility in which we all have a role. Whether we use theInternet at home, work, or school, there is a risk of identity theft, fraud, orabuse. DHS has developed a series of events and activities to engage the publicduring NCSM. Here are some things you can do to show your support:
- Post cybersecurity tips, news, and resources highlighting NCSM on social media sites;
- Use the NCSM 2015 hashtag #CyberAware in your social media messages;
- Join weekly NCSM Twitter chats every Thursday in October at 3 PM ET using hashtag #ChatSTC; and
- See what NCSM activities are happening in your area and join.

For cybersecurity resources you can use or share throughout the year, download the DHS Stop.Think.Connect. Toolkit. You can also test your knowledgeabout cybersecurity in the Stop.Think.Connect. Online Safety Quiz.
| | | back to top |

Using Portable Fire Extinguishers

| The U.S. FireAdministration (USFA) is sharing daily fire safety tips throughout the month ofOctober to help make homes and families safer. Now is a good time to reviewimportant fire safety tips with your family, including how to properly useportable fire extinguishers.

Portable fireextinguishers are a valuable resource for immediate use on small fires, and cansave lives and property. However, before you consider using an extinguisher,consider these very important details:
- The U. S. Fire Administration recommends that only people trained to use and maintain a fire extinguisher consider using them! Contact your local fire department for training in your area.;
- The type of fire extinguisher you use should match the type of fire. For example, an electrical fire would require a different extinguishing agent than a grease fire. Most extinguishers display symbols to show the kind of fire on which they can be used; and
- If you do not think you would be able to safely put the fire out in five seconds using an extinguisher, do not attempt to use it! Leave the area and call 911.

Should you need to use a fire extinguisher, follow the PASS method:
- Pull the pin to break the tamper seal;
- Aim low, pointing the extinguisher nozzle, horn or nose at the base of the fire;
- Squeeze the handle to release the extinguishing agent; and

- Sweep from side to side at the base of the fire until it appears to be out.
To learn more about fire safety, follow theUSFA hashtag #firesafein31 on Twitter at @usfire and on Facebook at www.facebook.com/usfire. |

America’s Safe Schools Week
October 18 – 24, 2015 is America’s Safe Schools Week.Many schools will be conducting activities to educate students and staff about schoolsafety procedures. Promoting a safe school environment also means preparingstudents for emergencies that can happen during the school day. Research shows that youth bring unique strengths to emergencypreparedness. In 2012, the Federal Emergency Management Agency (FEMA) createdthe Youth Preparedness Council(YPC) to bring together youth leaders from across the country who are engagedin youth preparedness. Council members are committed to involving other youth in variouscommunity preparedness activities, including at schools. For example, Councilmember Kiahna Lee Espia organized a Community Emergency Response Team (CERT) atthe Harvest Christian Academy in Guam. In addition to disaster response training,CERT members also train in First Aid, Basic Life Support, and cardiopulmonaryresuscitation (CPR), skills that can be used to help injured students andfaculty if a disaster strikes the school. Visitthe YPC website to learn more about the exciting ways Councilmembers have engaged the youth in their communities. During National Preparedness Month, The U. SDepartment of Health and Human Services (HHS) organized a campaign to promoteteen preparedness. Follow #Teens4Prep on Twitter and check out this special videos series ofteens discussing how they prepare their communitiesAmerica’sPrepareAthon! also help schools prepare for emergencies by providingguidance on conducting discussions and holding table top exercises. Download hazard-specificPlaybooks and other valuableresources today!

6941. Great Shakeout Exercise 2015

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-10-15 19:37:16 UTC
From: David Kleber
Topic: 6941 Message: 6941

Hello all,
We had another successful exercise today. This was our second year in a row running the paNBEMS net in support of the US East Great Shakeout earthquake exercise.
We had 8 stations participating during the exercise, 8 FLMSG messages sent and received and 2 FLAMP CSV spreadsheet files transferred.
The exercise started at 10:30 AM ET and was concluded at 12:50 PM ET.
Thanks to all who participated or monitored the exercise. Special thanks to the EMA of the 3 OEC's who opened their stations for the exercise!
-Dave Kleber, KB3FXIpaNBEMS Founder

6942. 6m or 10m SSB Simplex Repeater?

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-10-20 01:38:13 UTC
From: David Kleber
Topic: 6942 Message: 6942

Hello all,
I have a few questions:
I have an Argent Data Systems simplex repeater that I would like to put into service.
Is it legal to run a simplex repeater on 6m or 10m SSB on a fixed frequency?
If so, is there a frequency range or suggested channels where this could be used for SSB digital NBEMS modes on either 6m or 10m amateur bands?
-Dave, KB3FXIpaNBEMS Founder

Dave,

Repeaters should be coordinated. Check with the WPRC for coordination
and frequency info.

I have not heard of SSB repeaters before. Not that they don't exist. I've only found FM repeaters on 6 and 10.

I've had one for a few years and it's mostly been used (and rarely at that) for training purposes. We did look at it for special events where it could be set up to deliver bulletins, etc. on request.

I did ask the New England Spectrum Management Council about frequencies and they basically said, pick a simplex frequency that isn't used much.

We've used it for both voice and digital (NBEMS) modes. The device works very well but its niche seems to be very small.

Since 10 meters is an HF band there are strict rules about frequencies and modes for an automatically controlled station. I think you can safely and legally operate it though on part of 6 meters at 50.3-50.6 MHz http://www.arrl.org/band-plan

I would tend to stick with FM though so it is channelized, you will have a lot of confusion if stations have to spend air time tuning to an SSB signal.

Read part 97 rules carefully so it stays within the law. there has to be a means of killing the TX if something or someone hangs it or abuses it.

Hi Dave...

Just a little comment on propagation problems on the band(s) you're looking at...

The 6 es 10 m bands are pretty unstable during large / heavy wx events, which we normally are depended on for Ecom. This es especially true for 6m. This is something a group of us experienced a number of years ago when we put up a 6m repeater on a 800 ft Christian broadcast tower for us to use for Skywarn. Problem was, when the wx event arrived, so did unpredictable es weird propagation, It ranged from band enhancement to band going short or virtually dead locally, making interference es / or lack of coverage very problematic es the system useless for the planned use. After about a year or so of this behavior, we took the 6 m system down es replaced it w/ 2m.

The lesson we learned is that 6m is too unstable for Ecom use, during the very time Ecom is normally needed. This experience was w/ an FM system, but I don't see where SSB would likely be any better, especially when enhancement was in, given all the QRM that resulted. This might be great for a station hunting DX es willing to take the trouble to dig thru the QRM to get the contact, but not very efficient for Ecom.

I know that the efficiency NBEMS modes we use are somewhat more efficient during unstable propagation most of the time, but what we experienced during the year long, real time use for Ecom, I don't think that efficiency would overcome the problems created... especially w/ the large amount of QRM from large areas of the country, at the time.

Haven't had the experience w/ 10m like I've had w/ 6m (by the way... 6m is my favorite band) but given the inherent propagation differences between HF es VHF I think that 10m would be the more prudent choice, at least between the two bands. However, since 10m is the gateway to VHF, maybe there may not be too many differences between them.

Hope this info gives you some things to look for in comparing which band for you to decide on. Good Luck...

6949. MARS Exercise - Nov 2015

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-10-23 00:55:15 UTC
From: David Kleber
Topic: 6949 Message: 6949

From the ARRL newsletter...
ARES/RACES Teams Expected to Join MARS in Coronal Mass Ejection Disaster ExercisePreparations are nearly in place for the previously announced Military Auxiliary Radio System (MARS) coronal mass ejection (CME) disastercommunication exercise, which will take place Saturday through Tuesday, November 7-10. Amateur Radio Emergency Service (ARES) and Radio Amateur Civil Emergency Service (RACES) groups are expected to participate in the quarterly contingency HF exercise in support of the US Department of Defense."We are looking forward to this exercise and the opportunity to partner and train with the larger Amateur Radio community," Army MARS Program Manager Paul English, WD8DBY, told ARRL. The exercise scenario will simulate a CME event and focus on actions that radio operators should take prior to and following such an event, which could impact HF propagation. English said leaders from Army and Air Force MARS will hold a final exercise coordination teleconference on October 28 "to answer any final questions about the exercise and make sure everyone is ready to train."English said he's responded to some 90 inquiries from ARES and RACES groups as well as from individuals who would like to involve their ARES teams, and he expects about 50 ARES/RACES-affiliated organizations to participate. He said a few additional active duty military units also hope to take part in the exercise.English said the November exercise would simulate a radio blackout as well as infrastructure damage. "During the exercise, we will simulate the blackout with a 3 hour pause, and then we will bring stations back on air and begin handling requests for information," he told ARRL.Training objectives for this exercise will include understanding what a CME is and how much forecast lead time can be expected; the effects associated with a CME, and what precautions radio operators take to protect their equipment, prior to a severe CME. Following the simulated CME, operators will assess its effects and report that information. This will involve "inter-operation with Amateur Radio operators and groups to assist in assessment," English said.ARES and RACES teams, as well as individual radio amateurs, wishing to participate in this exercise may contact MARS and provide contact information.

Attached is info from a MARS Station for the EMP event......

What and how do we send our county info ????
Do we send a FLAMP as pdf file ?

You could send a PDF by FLAMP on one of the MT63 contact sessions, but you don't need to. Any format will do as long as you get the information passed.

Just a reminder, you need to provide the ACTUAL conditions of the various services, NOT an exercise simulation.

It might be a good idea to put "THIS IS AN EXERCISE" or "THIS IS A DRILL" somewhere in the transmissions.

6956. Possible FLDIGI-MFSK Bug

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-11-10 01:30:48 UTC
From: joseb@...
Topic: 6956 Message: 6956

I have the latest version of FLDIGI and I think I have found a bug when using MFSK-16 mode. If I leave the mode selector on "USB" and re-open fldigi, I get the start tone of an MFSK message on the left side. If I do the same thing with the selector on "LSB" I get the MFSK-16 start tone on the right side. Now, if I change the mode from "USB" to "LSB" or vice-versa the tone does not change sides. Changing to other modes other than "USB" or "LSB" does not change this result either. I am bringing this up because we had the Allegheny County digital practice net and participants were not able to receive a message I sent with MFSK-16, at the waterfall it looked like the message was inverted. I am wondering if someone has seen this before, and if this is somehow an expected behavior (which I doubt).

Thanks.

Jose (KB3UHX)

A few reminders:

1) I should have mentioned last week (or before) that with the recent time changes, VOA Radiogram is now one hour earlier by local time in most parts of Europe and North America. This is because VOA Radiogram is at the same UTC times year round. See the schedule below.

2) If you have an Android phone or tablet, the TIVAR (Text and Images Via Analog Radio) app is available at
http://sourceforge.net/projects/fldigi/files/AndFlmsg/TIVAR/
It's the receive-only, decode-only version of AndFlmsg.

3) If you use Fldigi to decode VOA Radiogram, Fldigi saves decoded MFSK images as png files in the folder \fldigi.files\images\ . The easiest way for you to send images with your reception reports, and for me to put them in the weekly gallery, is to attach those png files. Thanks!

This weekend's VOA Radiogram will consist mostly of the usual MFSK32, but it will also include some Olivia 32-2000 in case we have anything near the poor shortwave propagation that we experienced last weekend.

Here is the lineup for VOA Radiogram, program 137, 14-15 November 2015, all in MFSK32 except where noted:

1:31 Program preview
2:43 Ice volcanoes on Pluto*
9:03 New giant telescope in Chile*
15:26 Mealworms eat plastics* (followed by some music)
21:00 Olivia 32-2000: Bright light in California sky
25:59 MFSK32: Closing announcements*
28:30 Olivia 64-2000: Transmission schedule under closing music
* with image

Please send reception reports to radiogram@...

VOA Radiogram transmission schedule
(all days and times UTC):
Sat 0930-1000 5865 kHz (4:30 am EST)
Sat 1600-1630 17580 kHz (11:00 am EST)
Sun 0230-0300 5745 kHz (Saturday 9:30 pm EST)

Sun 1930-2000 15670 kHz (2:30 pm EST)
All via the Edward R. Murrow transmitting station in North Carolina.

The Mighty KBC transmitter site in Germany repeated (on shortwave, at least) The Giant Jukebox show from 1 November on 8 November. Because of this, the Olivia 64-2000 promised for last Sunday will be repeated this weekend, at 0130 UTC Sunday (Saturday 8:30 pm EST) on 7395 kHz. Reports to Eric: themightykbc@...m

Thanks for your reports from last weekend, difficult reception notwithstanding. Please tune in and write this weekend, as we hope for better shortwave conditions.

I'm now preparing the gallery of MFSK images from program 129 and will begin this weekend to respond to your reports from that program.

Kim

Kim Andrew Elliott
Producer and Presenter
VOA Radiogram
http://voaradiogram.net/

P.S.
I forgot to mention that effective this Saturday (14 November), the VOA Radiogram transmission Saturday at 0930-1000 UTC will be on the new frequency of 5865 kHz.

With that change, VOA Radiogram will no longer be co-channel with Alcaraván Radio in Colombia on 5910 kHz.

The Saturday 0930-1000 UTC broadcast is nominally directed to the Caribbean, but it is often heard in the Asia-Pacific region and, as we approach the winter solstice, might also be received in Europe.

I’m sure everyone in North America will want to be awake Saturday at 4:30 am, or earlier depending on time zone, to try the new frequency!

VOA Radiogram transmission schedule
(all days and times UTC):
Sat 0930-1000 5865 kHz (new)
Sat 1600-1630 17580 kHz
Sun 0230-0300 5745 kHz
Sun 1930-2000 15670 kHz
All via the Edward R. Murrow transmitting station in North Carolina.

6959. Sunday Eve 80m Bulletin Net Schedule Change to 8:30 PM ET

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-11-19 18:14:26 UTC
From: David Kleber
Topic: 6959 Message: 6959

Hello all,
Due to QRM from other net schedules and the daylight savings time change, we will be moving the paNBEMS Bulletin/Liaison schedule from 7:30 PM ET to our new winter time of 8:30 PM ET. The change will take effect on our next bulletin schedule on the evening of Sunday November 22, 2015.
For those who are new on the paNBEMS list, here are the stated goals and purposes of this schedule:
- paNBEMS 80m weekly HF Bulletin/Liaison Net starts at 8:30 PM Eastern Time every Sunday evening with Net Control call on 3.583 MHz USB using 8/500 Olivia, 1500 Hz center waterfall frequency followed by a FLAMP transmission approx 20 min in duration. The FLAMP transmission is usually conducted with mode MFSK-32 but we sometimes choose different modes. The use of RSID (RxID enabled on FLDIGI) should ensure that you will automatically detect the mode change, which is especially important for unattended stations wishing to copy the bulletin.
After the Bulletin transmission, we will then take calls for FLAMP fills followed by a call for stations with traffic only. After taking stations with traffic, we will open the spot for comments and ragchew.

The purpose of the bulletin transmission is to give receiving stations the opportunity to copy the FLAMP transmissions. Stations not confirming 100% also have the ability to request fills if they have transmit capabilities on 80m. The FLAMP file transmission will be repeated several times to give as many stations as possible the ability to receive all off the checksum blocks in order to reduce the need for calls for fills.
paNBEMS would like to encourage stations copying the paNBEMS bulletin to read the following on your local or regional phone nets. Keep in mind that all that is needed to receive the bulletin is the free NBEMS software from w1hkj.com, an SSB HF receiver and a computer with a working sound card and microphone. The mic can be an inexpensive plug in mic or an internal mic such as one built into a laptop.
Lastly, stations with traffic are encouraged to bring reports and information of interest to the net. But please be advised that the paNBEMS Bulletin/Liaison net is not intended for general check ins without traffic.
Please tune in on our new schedule and feel free to send your reception reports to:kb3fxi at yahoo dot com

Subject: [NY-NBEMS] VOA Radiogram, 21-22 November 2015 [2 Attachments]

Hello friends,

This weekend's VOA Radiogram will include some experiments.

Simultaneous text and image. One experiment will be the simultaneous transmission of text and an image. The text of the VOA News story about men overeating will be transmitted in MFSK32 at the usual center audio frequency of 1500 Hz. The MFSK32 image accompanying this story will be transmitted simultaneously at a center audio frequency of 2200 Hz. You will need two instances of Fldigi; that is, start Fldigi once, then start it again. If you cannot run two instances of Fldigi (some operating systems don't allow it), you can decode the image at 2200 Hz later from a recording. (You could also run Fldigi and MultiPSK simultaneously.)

At 15 seconds after the text begins, a tuning signal will help you find the exact center frequency near 2200 Hz. The image itself will start 20 seconds after the tone begins.

I had to reduce the audio level of both the text and image by 3 dB so that the combined audio of the text and image would not overload the transmitter and your receiver. This simultaneous transmission will be followed by the image only, at 1500 Hz, and at full audio level.

QR codes.
The broadcast will include two QR codes. They look like the attached.

You scan the QR code, usually with your mobile device, to obtain information.

The first QR code will follow the VOA News Story about Middle East hackers. It will provide the link to the full text of the story. The second QR code will be at the end of the show, with the VOA Radiogram transmission schedule.

I don't know much about QR codes, so your advice would be appreciated. Are the transmitted QR codes too big? Unnecessarily big? How small can I make them? (The smaller they are, the less time required to transmit them.)

Here is the lineup for VOA Radiogram, program 138, 21-22 November 2015, all in MFSK32 except where noted:

1:32 Program preview
2:44 Earth-like exoplanet may not be habitable*
7:29 New tool to search for extraterrestrial life*
11:13 Analysts warn of Middle East hackers*
20:43 Men overeat to show off to women (simultaneous image)*
23:45 Closing announcements*
28:41 Olivia 64-2000: Transmission schedule
* with image

Please send reception reports to radiogram@...

VOA Radiogram transmission schedule
(all days and times UTC):
Sat 0930-1000 5865 kHz
Sat 1600-1630 17580 kHz
Sun 0230-0300 5745 kHz
Sun 1930-2000 15670 kHz
All via the Edward R. Murrow transmitting station in North Carolina.

The Mighty KBC will transmit a minute of MFSK32 Sunday at 0130 UTC (Saturday 8:30 pm EST) on 7395 kHz, via Germany. This is part of the KBC broadcast to North America Saturday 2300 UTC to Sunday 0200 UTC on 7395 kHz. Reception reports for KBC reception and decoding to Eric: themightykbc@...

Thanks for your reception reports. Today I hope to answer the last of the reports from program 130, then I'll put together the MFSK image gallery from program 131.

I hope you can tune in and write in. Have fun with the experiments.

Hi all; I am mainly a cw op on 40m using vintage eq and qrp kits, the main freqs for most cw are between 7025 and 7055 with club functions like fists, skcc, etc also.
being xtal controlled not everyone can qsy up or down when a digital stn decides to plunk down on 7030~7050 instead of the normal (to me) freqs of 7070 and up.
got creamed this sat am during a qso with an 88 yr old in del, after signing, fired up the digital stn to see whats up. it was the NYS-NBEAMS net .
Other than my displeasure with the freq issue on 40m, i wonder if this is going to be the new normal. a quick spin to 7070 and above showed no freqs in use other than the normal psk31 on 7070.
Just my two cents, I have more xtals and a eico vfo i could employ but dont understand why i have to.

paNBEMS call spot on 40m is 7.0725 USB, 1500 Hz Center Waterfall, +/- 500 Hz. 80m spot is 3.583 USB where we have had some CW ops who recently started a qso right on top of one of our schedules.

What comes around, goes around. paNBEMS does our best to pick spots that are most appropriate for the bandwidth and duration of our nets and we never claim ownership of a specific spot.

I operate QRP as a Flying Pig, I have a VFO.. Most don't.....
When I hear MT63 2K playing of 2/3 of the 3khz waterfall wiping out 10 or 12 PSK stations at one time I have to wonder if it's
deliberate interference or stupidity.

I would like to see smaller footprints as Olivia 8-500 or MFSK32 rather then 2khz modes or more....
With all the modes we have in FLdigi why chose a wide band..... Some of us worked for months to determine
what mode works best under most condition..... I thought it was Olivia 8-500

If a person decides to use 2 khz bandwidth, they should make sure they are not interfering with other low power stations
If the interference is malicious, the interfering station maybe liable for an Official Observer card.

Good frequencies for 32 tone 1000 Hz Olivia on 20 meters... 14.1075, 14.1065 and 14.1055
The 32 tone 1000 hz olivia is a better weak signal mode than 16/500. However, these frequencies
are shared with pactor and other wideband modes.

Seems like many are crowded up next to the psk frequency as it is easier to make a contact there.
It might be better to have Olivia right above the WSJT stations which are around 14.073.

Creative writing classes at Dubois Penn State has taught me that the age of the person you were talking to has nothing to do with the style of the operator. If you were there first, then you had the frequency. There is a set band plan - which is voluntary, but is observed by all.
Unfortunately in today's world, where amateur radio licenses are handed out like Quaaludes at a Grateful Dead Concert. Where even the people that may think that they are qualified to be Elmer's, are usually nothing more than over glorified CB radio operators. Just passed a 35 question, multiple guess test that proves absolutely nothing as to the proficiency of the operator.
Instead of complaining about the symptoms, why not complain about the actual problem - poor operators and a lack of competent Elmer's.
Instead of complaining, why not volunteer your services at the local club level and encourage the ARRL to become involved and encourage more knowledgeable people to stand up and not just complain about the problem, but do something about the problem!
This may make you unpopular at the local club level, since most people will tell you to go F yourself - because they do not like being told how they don't know what they are doing, or that they are doing it wrong!

Happy Thanksgiving to all.
Let us all reflect on, and be thankful for, the freedom we still have.
And let us have the strength and purpose to defend it, too, from all enemies, both foreign and domestic.
-Dave Kleber, KB3FXI

Dwight D. Eisenhower, 1961
Public Papers of the Presidents, Dwight D. Eisenhower, 1960, p. 1035- 1040
My fellow Americans:
Three days from now, after half a century in the service of our country, I shall lay down the responsibilities of office as, in traditional and solemn ceremony, the authority of the Presidency is vested in my successor.This evening I come to you with a message of leave-taking and farewell, and to share a few final thoughts with you, my countrymen.Like every other citizen, I wish the new President, and all who will labor with him, Godspeed. I pray that the coming years will be blessed with peace and prosperity for all.
Our people expect their President and the Congress to find essential agreement on issues of great moment, the wise resolution of which will better shape the future of the Nation.
My own relations with the Congress, which began on a remote and tenuous basis when, long ago, a member of the Senate appointed me to West Point, have since ranged to the intimate during the war and immediate post-war period, and, finally, to the mutually interdependent during these past eight years.
In this final relationship, the Congress and the Administration have, on most vital issues, cooperated well, to serve the national good rather than mere partisanship, and so have assured that the business of the Nation should go forward. So, my official relationship with the Congress ends in a feeling, on my part, of gratitude that we have been able to do so much together.
II.We now stand ten years past the midpoint of a century that has witnessed four major wars among great nations. Three of these involved our own country. Despite these holocausts America is today the strongest, the most influential and most productive nation in the world. Understandably proud of this pre-eminence, we yet realize that America's leadership and prestige depend, not merely upon our unmatched material progress, riches and military strength, but on how we use our power in the interests of world peace and human betterment.
III.Throughout America's adventure in free government, our basic purposes have been to keep the peace; to foster progress in human achievement, and to enhance liberty, dignity and integrity among people and among nations. To strive for less would be unworthy of a free and religious people. Any failure traceable to arrogance, or our lack of comprehension or readiness to sacrifice would inflict upon us grievous hurt both at home and abroad.
Progress toward these noble goals is persistently threatened by the conflict now engulfing the world. It commands our whole attention, absorbs our very beings. We face a hostile ideology -- global in scope, atheistic in character, ruthless in purpose, and insidious in method. Unhappily the danger is poses promises to be of indefinite duration. To meet it successfully, there is called for, not so much the emotional and transitory sacrifices of crisis, but rather those which enable us to carry forward steadily, surely, and without complaint the burdens of a prolonged and complex struggle -- with liberty the stake. Only thus shall we remain, despite every provocation, on our charted course toward permanent

peace and human betterment.
Crises there will continue to be. In meeting them, whether foreign or domestic, great or small, there is a recurring temptation to feel that some spectacular and costly action could become the miraculous solution to all current difficulties. A huge increase in newer elements of our defense; development of unrealistic programs to cure every ill in agriculture; a dramatic expansion in basic and applied research -- these and many other possibilities, each possibly promising in itself, may be suggested as the only way to the road we wish to travel.
But each proposal must be weighed in the light of a broader consideration: the need to maintain balance in and among national programs -- balance between the private and the public economy, balance between cost and hoped for advantage -- balance between the clearly necessary and the comfortably desirable; balance between our essential requirements as a nation and the duties imposed by the nation upon the individual; balance between actions of the moment and the national welfare of the future. Good judgment seeks balance and progress; lack of it eventually finds imbalance and frustration.
The record of many decades stands as proof that our people and their government have, in the main, understood these truths and have responded to them well, in the face of stress and threat. But threats, new in kind or degree, constantly arise. I mention two only.
IV.A vital element in keeping the peace is our military establishment. Our arms must be mighty, ready for instant action, so that no potential aggressor may be tempted to risk his own destruction.
Our military organization today bears little relation to that known by any of my predecessors in peacetime, or indeed by the fighting men of World War II or Korea.
Until the latest of our world conflicts, the United States had no armaments industry. American makers of plowshares could, with time and as required, make swords as well. But now we can no longer risk emergency improvisation of national defense; we have been compelled to create a permanent armaments industry of vast proportions. Added to this, three and a half million men and women are directly engaged in the defense establishment. We annually spend on military security more than the net income of all United States corporations.
This conjunction of an immense military establishment and a large arms industry is new in the American experience. The total influence -- economic, political, even spiritual -- is felt in every city, every State house, every office of the Federal government. We recognize the imperative need for this development. Yet we must not fail to comprehend its grave implications. Our toil, resources and livelihood are all involved; so is the very structure of our society.
In the councils of government, we must guard against the acquisition of unwarranted influence, whether sought or unsought, by the militaryindustrial complex. The potential for the disastrous rise of misplaced power exists and will persist.
We must never let the weight of this combination endanger our liberties or democratic processes. We should take nothing for granted. Only an alert and knowledgeable citizenry can compel the proper meshing of the huge industrial and military machinery of defense with our peaceful methods and goals, so that security and liberty may prosper together.
Akin to, and largely responsible for the sweeping changes in our industrial-military posture, has been the technological revolution during recent decades.

In this revolution, research has become central; it also becomes more formalized, complex, and costly. A steadily increasing share is conducted for, by, or at the direction of, the Federal government.
Today, the solitary inventor, tinkering in his shop, has been overshadowed by task forces of scientists in laboratories and testing fields. In the same fashion, the free university,

historically the fountainhead of free ideas and scientific discovery, has experienced a revolution in the conduct of research. Partly because of the huge costs involved, a government contract becomes virtually a substitute for intellectual curiosity. For every old blackboard there are now hundreds of new electronic computers.
The prospect of domination of the nation's scholars by Federal employment, project allocations, and the power of money is ever present and is gravely to be regarded.
Yet, in holding scientific research and discovery in respect, as we should, we must also be alert to the equal and opposite danger that public policy could itself become the captive of a scientific technological elite.
It is the task of statesmanship to mold, to balance, and to integrate these and other forces, new and old, within the principles of our democratic system -- ever aiming toward the supreme goals of our free society.
V.Another factor in maintaining balance involves the element of time. As we peer into society's future, we -- you and I, and our government -- must avoid the impulse to live only for today, plundering, for our own ease and convenience, the precious resources of tomorrow. We cannot mortgage the material assets of our grandchildren without risking the loss also of their political and spiritual heritage. We want democracy to survive for all generations to come, not to become the insolvent phantom of tomorrow.
VI.Down the long lane of the history yet to be written America knows that this world of ours, ever growing smaller, must avoid becoming a community of dreadful fear and hate, and be instead, a proud confederation of mutual trust and respect.
Such a confederation must be one of equals. The weakest must come to the conference table with the same confidence as do we, protected as we are by our moral, economic, and military strength. That table, though scarred by many past frustrations, cannot be abandoned for the certain agony of the battlefield.
Disarmament, with mutual honor and confidence, is a continuing imperative. Together we must learn how to compose differences, not with arms, but with intellect and decent purpose.
Because this need is so sharp and apparent I confess that I lay down my official responsibilities in this field with a definite sense of disappointment. As one who has witnessed the horror and the lingering sadness of war -- as one who knows that another war could utterly destroy this civilization which has been so slowly and painfully built over thousands of years -- I wish I could say tonight that a lasting peace is in sight.
Happily, I can say that war has been avoided. Steady progress toward our ultimate goal has been made. But, so much remains to be done. As a private citizen, I shall never cease to do what little I can to help the world advance along that road.
VII.So -- in this my last good night to you as your President -- I thank you for the many opportunities you have given me for public service in war and peace. I trust that in that service you find some things worthy; as for the rest of it, I know you will find ways to improve performance in the future.
You and I -- my fellow citizens -- need to be strong in our faith that all nations, under God, will reach the goal of peace with justice. May we be ever unswerving in devotion to principle, confident but humble with power, diligent in pursuit of the Nation's great goals.To all the peoples of the world, I once more give expression to America's prayerful and continuing aspiration:
We pray that peoples of all faiths, all races, all nations, may have their great human needs satisfied; that those now denied opportunity shall come to enjoy it to the full; that all who yearn for freedom may experience its spiritual blessings; that those who have freedom will understand, also, its heavy responsibilities; that all who are insensitive to the needs of others will learn charity; that the scourges of poverty, disease and ignorance will be made to disappear from the earth, and that, in the goodness of time, all peoples will come to live together in a peace guaranteed by the binding force of mutual respect and

love.

6970. Allegheny County Digital Training Net

Yahoo group: paNBEMS (2012 — 2018)

From: joseb@...
Topic: 6970 Message: 6970

Hello everyone,

As some of you may know the NBEMS training net on the W3YJ repeater has been re-activated and renamed the Allegheny County Digital Training Net. The net has been setup to run on Sundays at 8:00PM on a bi-weekly basis. I have created an editable spreadsheet (link below) which contains the dates for the training net, and it is editable for anyone wanting to volunteer as net control. This net has as its main purpose to train people on the use of NBEMS system, but experimentation with other digital modes is highly sought and encouraged. If anyone has any questions please do not hesitate to send me an email to joseb@alum.rpi.edu.

Spreadsheet schedule link: https://docs.google.com/spreadsheets/d/1rfKDgZrDGr8Ta36U1dlTywdX5Cazta-UQ7CPkcTsJqw/edit?usp=sharing https://docs.google.com/spreadsheets/d/1rfKDgZrDGr8Ta36U1dlTywdX5Cazta-UQ7CPkcTsJqw/edit?usp=sharing

For those of use from out of the area, that might be IN the area over
the holidays, what is the frequency and location of the W3YJ repeater?
I'll be in Johnstown for the holidays, but unfortunately I arrive after
the 20th and depart before the 3rd so I'll miss the net...

Thanks very much for the information, Jose.

I will make my best effort to get in on the net. I have the paNBEMS Bulletin/Liaison net on 3.583 USB every Sunday night at 8:30 so I can check in and then monitor while I'm transmitting the HF bulletin.

Let's hope the Pittsburgh area hams will increase their participation in NBEMS digital operations. It takes time to get these things going.

Good Afternoon John,

The Sunday Night paNBEMS bulletins are sent using Fldigi. Flmsg is not used for them.

You need to have Fldigi and Flamp both up and running before the transmission starts.

So let me know if you had Flamp running. If not that is the starting place.

If you did have flamp running then we'll have to do a little more looking.

73

John,

Correct the first line: The Sunday Night paNBEMS bulletins are sent using Fldigi. Flmsg is not used for them.

to read: The Sunday Night paNBEMS bulletins are sent using Flamp. Flmsg is not used for them.

Fat fingers and not reading caused that oops.

Hello WT and Mark.
WT is correct. FLDIGI, when properly configured, will trigger FLMSG to automatically open upon the complete reception of a FLMSG message.
FLAMP, on the other hand, has to be open and running in order to compile the received blocks and save the transmitted file.
KC3EDP, I am available today and tomorrow (Wed/Thur). I'll be in and out of the shack but feel free to put out a call on 7.0725 USB and I'd be glad to work some tests with your station.

Good point, Dave.
Having that little FLAMP exe running in the background isn't going to ever hurt anything.
Mine is on autostart and is always running if FLDIGI is open.

6981. Problems receiving FLAMP

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-12-17 15:38:59 UTC
From: aa3ye@...
Topic: 6981 Message: 6981

I am still having some problems getting FLAMP to receive the message. I have FLDIGI configured to autostart FLAMP along with FLWRAP, FLMSG AND FLARQ. These all open when i start FLDIGI. I then minimize each the the program other than FLDIGI itself. Sometimes when nets are sending out the FLAMP PaNBEMS weekly Bulletin, I will receive it the FLDIGI receive pane but it does not activate FLAMP and is not received by FLAMP not just a few missing blocks but the entire bulletin or sent message. After the last net on Sunday I had a very informative qso with K3CC, Skip via fldigi and he answered some of my questions and provide lots of other useful info.
The questions and problems I still have with FLAMP are as follows. The qso with K3CC answers or tries to answer some of these questions.

Does the receive tab button need to be pressed or activated to receive FLAMP messages?

Can FLAMP screen be minimized and still receive FLAMP messages?

Will the receive tab button remain active when FLAMP screen is minimized? I know FLAMP will still receive messages when the FLAMP screen is minimized.

Several times I have had problems getting FLAMP to receive. After I closed FLAMP and re-opened it it seems to work. I don’t think that is normal.

Does MT63 2000L work well or at all with FLAMP on VHF or UHF. If not which modes would be the best?

PSK 5X 125R
PSK 500R
MFSK32
PSKR 5X PSK63R This might be the same as 5X PSK 63R
MFSK64

I have one other question not directly related to FLAMP but more generally about FLDIGI on VHF versus HF.

Why must I adjust the Mixer Volume Speakers USB Audio codex from the 50% level I use for HF FLDIGI operations to near 100% level for VHF operations? If I don't people can not see my signal on the waterfall very well if at all. I am using a SignaLink USB and a Kenwood TS-2000

Thanks for the help.

I will continue to check into the digital nets on a regular basis

73

Joe Maybe I can answer some of your questions.

I am the Southern Territory SATERN digital net manager. We use FLDIGI FLMSG and FLAMP each week on the SATERN So. Terr. Digital Net Saturdays NOON Central Time (14065 USB OLIVIA 8/500 +1000).

FLDIGI serves as the control application to the plugins FLMSG and FLAMP. So if you autostart FLMSG and FLAMP with FLDIGI, they will automatically connect and work with FLDIGI. However, if for any reason you stop or restart FLDIGI and do not restart FLMSG or FLAMP the connection may be lost. For best results, always depend on FLDIGI to start the plugins, then do not stop or restart them without restarting FLDIGI.

Bear in mind that FLAMP can both send and received messages. So if you are expecting to receive a message, the RECEIVE tab should be active. You can minimize it as long as the above procedures are followed. Your NCS or sending station can repeat the message and provide fill-ins providing nothing changes from one transmission to the next.

Several of the SATERN digital net regulars are very busy and, after checking in, may leave the station active to take care of non-radio activities, then come back later to save the received FLMSG formatted message and view or print it with FLMSG.

We have a long history with a number of digital modes on HF and VHF/UHF. I will share with you our experiences. The following list may help with your decision. It is presented in order by best reliability and throughput on HF with some notes as to vulnerabilities:

8PSK125F - Fastest throughput when very good conditions exist. Very good choice for VHF/UHF repeater or simplex media when low noise conditions exist. Like all PSK modes it is subject to some noise and QSB. Good results have been reported by net members with the faster modes like 8PSK500F and faster. It is very quick.

THOR22 - Twice as fast as OLIVIA and quite reliable even with QRM and QSB. Favored by PSKMail system when PSK fails.

MFSK64L - Almost as fast as THOR22 but not quite as robust. It has a fairly long latency and flush-out.

MT-63 500L - Throughput is good but has a very long latency and flush-out. It is used frequently by MARS and ARES. Unless needed for inter-operability other modes may be better. The wider modes of MT-63 may have faster throughput but also carry the bandwidth restriction on HF when the data / CW segment of the band.

PSK and PSKR - although common in digital mode use, it is very vulnerable to noise and QSB. It is the least reliable of the available modes in FLDIGI.

OLIVIA - extremely robust. It will work when you do not even hear the tones. However, it is much slower than other modes (20-30 baud). We use only for check in and to insure error free reception when other modes are not as reliable. We use it to fill missing blocks after the message has been sent in another mode but not reliably.

Bottom line, there is no substitute for experience. You must perform test QSOs on your media and find what is most reliable and fastest for you. Repeaters present lead-in and latency problems that can be overcome by FLDIGI with some adjustment in the configuration. The lower noise bands like 10, 6, and 2 meters as well as UHF will work well with the faster and wider-band modes like 8PSK125F and 8PSK500F in the data/CW segment of these bands.

Hope this helps.

de AD5XJ SATERN So. Terr. Net Mgr.

Hi, We have had very good results using DominoEX44 on our repeater. For some reason, the repeater did not care for MT631000L or 2000L. It also did not function as well with the pskr or multicarrier modes. As to what modes work for what, VHF/UHF is a very different animal particularly if you are using repeater ops. We are using a Yaesu system fusion repeater in auto detect mode. For some reason, some of the tone modes would cause the repeater to glitch out a bit....it really shouldn't but it did. We just had to experiment and play around till we found the right combo.

Hi again, as to why your audio output levels change between HF and VHF/UHF, I use two different radios and have noticed that the Yaesu FT857D requires a much higher audio signal input from the signal link. Not sure if that is your situation but rather than tweak the audio mixer controls in Windows, use the signalink tx level to boost your audio output. The optimum settings for the Windows audio mixer are as close to 0 db as you can set them and then use the signalink for signal adjustment. Their is a fault in some of the older signalink chips that cause windows to see the signal as a mic input rather than a line input. If the signalink still can't generate enough signal to drive your audio output, there is an internal jumper that can be moved to increase both input and output. I would refer you to the signalink website for that.

From: Dave Frazier wb0kgn
Topic: 6981 Message: 6985

One of the biggest problems I have seen with the faster modes is too much audio. Usually, receive audio is the problem.

Another problem, less prevalent but still out there, is different sample rate settings in FLdig from those in the sound card, I found 41,000 or 48,000 per second to be good for transmit...and most know about this. I like 96,000 samples per second for receive.

Subject: [paNBEMS] Re: Problems receiving FLAMP

Hi, We have had very good results using DominoEX44 on our repeater. For some reason, the repeater did not care for MT631000L or 2000L. It also did not function as well with the pskr or multicarrier modes. As to what modes work for what, VHF/UHF is a very different animal particularly if you are using repeater ops. We are using a Yaesu system fusion repeater in auto detect mode. For some reason, some of the tone modes would cause the repeater to glitch out a bit....it really shouldn't but it did. We just had to experiment and play around till we found the right combo.

Joe, have a few questions/suggestions.
1. First the versions number of the programs in question. There has been changes over the years to address such issues.
2. Make sure ARQ I/O is selected in the I/O config panel.
3. Make sure the IP Address and port number are set to there defaults. It's possible the operating system or other program might be using the port number for some other reason. However, if FLMSG is working then that would not be the case.
4. Isolate the radio from the program. Record FLDIGI/FLAMP transmit audio and play it back. Receive anything?

Toggling [ ] TX generate / [ ] Playback start/stops the operation.

Note: FLAMP when properly connect to FLDIGI will receive messages regardless as to what tab is selected.

Subject: [paNBEMS] Problems receiving FLAMP

I am still having some problems getting FLAMP to receive the message. I have FLDIGI configured to autostart FLAMP along with FLWRAP, FLMSG AND FLARQ. These all open when i start FLDIGI. I then minimize each the the program other than FLDIGI itself. Sometimes when nets are sending out the FLAMP PaNBEMS weekly Bulletin, I will receive it the FLDIGI receive pane but it does not activate FLAMP and is not received by FLAMP not just a few missing blocks but the entire bulletin or sent message. After the last net on Sunday I had a very informative qso with K3CC, Skip via fldigi and he answered some of my questions and provide lots of other useful info.
The questions and problems I still have with FLAMP are as follows. The qso with K3CC answers or tries to answer some of these questions.

Does the receive tab button need to be pressed or activated to receive FLAMP messages?

Can FLAMP screen be minimized and still receive FLAMP messages?

Will the receive tab button remain active when FLAMP screen is minimized? I know FLAMP will still receive messages when the FLAMP screen is minimized.

Several times I have had problems getting FLAMP to receive. After I closed FLAMP and re-opened it it seems to work. I don’t think that is normal.

Does MT63 2000L work well or at all with FLAMP on VHF or UHF. If not which modes would be the best?

PSK 5X 125R
PSK 500R
MFSK32
PSKR 5X PSK63R This might be the same as 5X PSK 63R
MFSK64

I have one other question not directly related to FLAMP but more generally about FLDIGI on VHF versus HF.

Why must I adjust the Mixer Volume Speakers USB Audio codex from the 50% level I use for HF FLDIGI operations to near 100% level for VHF operations? If I don't people can not see my signal on the waterfall very well if at all. I am using a SignaLink USB and a Kenwood TS-2000

Thanks for the help.

I will continue to check into the digital nets on a regular basis

Robert thanks for trying to help

I have switched to fldigi 3.23.06 two minutes ago I have been running fldigi 3.23.05
i am running flwrap 1.34
flmsg 2.0.12
flamp 2.2.03
flarq 4.3.5

The Configure IO ha the 'LOCK' checked; 'Enable ARQ' checked and 'Enable CSMA' checked

everything below that is ghosted out but the numbers are:

PORT
KISS 3 Continue 7342
2 KPSQLA Alternate 7343

ARQ 127.0.01 7322
XML 127.0.01 7362
flrig 127.0.01 12345
flog 127.0.01 8421

tonight we had a ARES/RACES meeting test practice session using a closed system with TurtleBeach soundcards into a common terminal i.e. not over the air (isolated from any radio) and only one of the five participants was able to have the flamp to record the blocks received none of the other participant were able to get flamp to work. All received the listing of the data blocks in the receive pane of fldigi but flamp did not activate for any of the other four computers. one was running XP, one was running Windows 10 and the others were running Windows 7. I was running Windows 7

Under the Configure tab in flamp the only boxes checked are:

Auto Sync flamp to fldigi mode selector

Enable Tx on report

Auto save subfolders in local time, otherwise UTC

Should these and or other boxes be checked?

Hope you can help me and others

6988. VOA RADIOGRAM

Yahoo group: paNBEMS (2012 — 2018)
Date: 2015-12-18 17:27:00 UTC
From: David Kleber
Topic: 6988 Message: 6988

Just a reminder for those who have been on the list and a heads up for our new subscribers.

Voice of America has been transmitting NBEMS/FLDIGI on their worldwide shortwave broadcasts.

Anyone with a shortwave receiver and the free NBEMS/FLDIGI software can receive the broadcasts, conditions permitting, of course.

This is also a good way for folks to test the NBEMS Android apps that can run on a smartphone or tablet. Again, the apps are free.

More info at:
http://voaradiogram.net/

-Dave Kleber, KB3FXI
paNBEMS Founder

Here's a forward from Kim, the VOA Radiogram Producer

Hello friends,

As your reports from last weekend indicate, mid-winter (in the northern hemisphere) reception can be challenging, especially in Europe during our Sunday 1930-2000 UTC broadcast on 15670. On the other hand, this time year provides an opportunity for some European listeners to receive and decode the Saturday 0930-1000 transmission on 5865 kHz.

This weekend will be another all-MFSK32 show, with plenty of images, the last one holiday related and from my neighborhood in northern Virginia.

Here is the lineup for VOA Radiogram, program 142, 19-20 December 2015, all in MFSK32:

1:31 Program preview
2:46 Gamma rays detected from across universe*
9:10 IS launches radio in eastern Afghanistan*
12:56 World Internet Conference in Wuzhen, China*
20:44 SSTV from the International Space Station*
24:29 Closing announcements*
* with image

Please send reception reports to radiogram@...

VOA Radiogram transmission schedule
(all days and times UTC):
Sat 0930-1000 5865 kHz
Sat 1600-1630 17580 kHz
Sun 0230-0300 5745 kHz

Sun 1930-2000 15670 kHz
All via the Edward R. Murrow transmitting station in North Carolina.

The Mighty KBC will broadcast a minute of MFSK32 Sunday at 0158 UTC (Saturday 8:58 pm EST) on 7395 kHz, via Germany. This new 0158 transmission time coincides with the beginning of the Radio Romania International interval signal for their French broadcast starting at 0200 UTC. This co-channel situation is a good test for the MFSK32. The entire KBC broadcast is Saturday 2300 to Sunday 0200 UTC on 7395 kHz. Reports for this KBC reception to Eric: themightykbc@...

Thank you for your reception reports. I'm now compiling the MFSK image gallery from program 132 (17-18 October) and will be sending emails over the weekend.

Kim

Joe, if that is the case, the a few more questions are in order...
I find it odd that so many (OS versions) used would result is the same issue. The program runs without issue on my Windows 7 note book and MacOSX 10 desktop.

1. Do you and the other computers have a standard software install (outside of OS version) ?2. Using the same antivirus program.3. Using the same firewall configuration.4. The downloaded program (FLAMP) for all computers with the issued came from the same source (cd/dvd/thumb drive).
Please record tx audio and play the audio back, even though no radio was used there is still a middle man involved.

Robert

All using Turtle Beach sound cards?

I'm not sure what is meant by closed system. Are you all just sitting in a room together?

How about just trying a plug in mic and the internal sound cards with acoustic coupling.

I can generally get someone up and going from scratch with a phone call and some basic setup in about 10 minutes or less.

Something bad is going on with a 4 out of 5 failure rate

Hi all, Just wanted to let everyone know about a new NBEMS net. It is the WV HF digital net. This net will meet on Wednesday evening at 0130Z / 2030H eastern time on 3585 +/- 2kc for qrm. Net ops on Olivia 8/500 with a 1500hz offset. This will be a message and traffic handling net for traffic into and out of WV. We welcome net liasons from other nets and hope you bring some traffic to WV. See you on the WF.

6995. 1600 Pactor or Winmor on 3.583 MHZ USB +2500 Hz

Yahoo group: paNBEMS (2012 — 2018)
Date: 2016-01-18 02:34:41 UTC
From: David Kleber
Topic: 6995 Message: 6995

Well,
I'd sure like to know who's running pactor or winmor on this spot at 1600 Hz wide bandwidth. It totally trashed the paNBEMS bulletin net tonight.
While it's not a technical violation, it sure falls under the category of taking a dump on your fellow amateur radio operators and ignoring the gentleman's agreements for band use.
That pactor or wimnor signal was VERY strong here in Pittsburgh.
Very frustrating.
Sorry to all those who were interfered with by that station.
BTW, I did had the clear spot at the start of, and about 10 minutes prior to, the start of the net.
-Dave, KB3FXI

Dave,
We heard that signal here in Beaver County rather strong, but I was able to copy the bulletin100% by the end of the second pass.Your signal was strong at my QTH tonight.I relayed the bulletin to N3TN via FM simplex at 145.550.
Dan - KB3VSP

It was a winlink station doing a mail exchange. There was too much going on
to hear the CW id clearly.

And the user station was as wide as a barn door.

Ok, WT. Needless to say, very frustrating.
In any case, you have a clear spot now and I'm at about 50 of your 127 block FLAMP right now.
If you'd like to stick around, I could do a resend on 5xPSK63R on the clear spot with a single pass after a quick comm check if you'd like.
I'll put out the call at the end of your FLAMP transmission. No problem if you can't stick around for that.

Tried to call you after the broadcast.

K3ETD in Berks had this to say:

Hi WT perfect copy on the xmission tonight clear frequency
The earlier xmission from Dave was a disaster here I could barely hear
him and then the winmor station and the RTTY station on the low side
didn't help.

Chuck
K3ETD

It was copied by N9NMR with 2 fills.

The winlink stations do not have any method of detecting that a frequency
is in use. Something that should be corrected in their game plan.

And I am a winlink user who uses it regularly to keep in touch with my
friend on board a ship. Still in all it leaves a lot to be desired from the
standpoint of neighbourly sharing of the band. I have it easier sending at
2215 eastern but between 1900 and 2200 that portion of the 80 meter band is
like the radio version of the Schuylkill Expressway.

I don't know how the CW nets are faring on 3585 with that pactor station.

Regards,

W.T.

Topic: 6995 Message: 7001

Sorry, sir.
I got pulled out of the shack and missed the end of your transmission, which was 100%, by the way.
I'm on a low hanging 66' doublet right now. I think I have water in the feedline to my old G5RV which was my best performing antenna on 80m.
I think I should be pulling the trigger on some new feedline and a HyPower Trap dipole tuned for 40m/80m but I don't think I'll be able to raise that until spring. I plan on setting it up with counterweights on the ends and a pulley for the feed point so that I can raise and lower it for optimal NVIS.
Ok... off to bed. I have an 11 hour day tomorrow and then Tuesday off.

WT,

WinMOR and Pactor do have the ability to detect if a channel is in use, but because of the perception of intentional transmission to block them, many long time sysops have turned it off. I'm trying to show them that doing that isn't helping the situation, but it's going to take time to convince them of that. This will change when the Winlink Development Team switches from using WinMOR to ARDOP, as the latter will not have a way to disable the busy channel detection.

Topic: 6995 Message: 7003

Well, one thing these robot ops can do is to use common sense and not run a 1600 Hz wide automated mode down in the portion of the 80m band that has a gentleman's agreement to 500 Hz or less.
I'd like to see the robots relegated to their own band allocation where they can fight each other rather than trashing the manned ops down in the gentleman's agreement portions of the bands where we run narrow band digital.
This is one of the reasons why I decided not to renew my ARRL membership this year. The ARRL never spares an opportunity to promote WL2K. And although they have given NBEMS some credit in the Public Service Handbook, of which I was a contributor, and have made some mention of NBEMS in QST, for the most part, in my opinion, they treat NBEMS as the red-headed stepchild.

Dave,

Respectfully, the station most likely to have caused the interference to your net is listed as just above the lower limit to the 80 meter automatic sub-band on the Winlink website's map of active stations, and is only active on that frequency at night.

Dave I wondered what was up as I missed the messg. also. Any chance of creating a S.O.P. to handle such?During a "Real World" issue, there could be those who jam signals intentionally and we'll need plan B, plan C etc.... I'm speaking as a former 05B10 Army radio operator. And had the same issue while in the Air Force. A German ECM team took a weekend in our area and jammed our radios. Our NCO's were clueless what to do, and this was cold war 1987-1988.

K3ETD in Berks had this to say:

Hi WT   perfect copy on the xmission tonight   clear frequency
The earlier xmission from Dave was a disaster here I could barely hear
him and then the winmor station and the RTTY station on the low side
didn't help.

Chuck
K3ETD

It was copied by N9NMR with 2 fills.

The winlink stations do not have any method of detecting that a frequency is in use. Something that should be corrected in their game plan.

And I am a winlink user who uses it regularly to keep in touch with my friend on board a ship. Still in all it leaves a lot to be desired from the standpoint of neighbourly sharing of the band. I have it easier sending at 2215 eastern but between 1900 and 2200 that portion of the 80 meter band is like the radio version of the Schuylkill Expressway.

I don't know how the CW nets are faring on 3585 with that pactor station.

Dave,
We heard that signal here in Beaver County rather strong, but I was able to copy the bulletin100% by the end of the second pass.Your signal was strong at my QTH tonight.I relayed the bulletin to N3TN via FM simplex at 145.550.
Dan - KB3VSP

I have a copy of MixW set up with no PTT, so that it can run in monitor only mode, on the same radio as FLDIGI. I set up MixW to monitor in PACTOR mode and it sometimes picks up callsigns from the WinLink pollution.

It can also document WinLink coming in on top of an existing QSO, wiping it out.

The station might not even been American. Lots of countries do not have the bandwidth restrictions in place by the FCC. If the signal preceded the bulletin then it was a quiet frequency. 3584 is a listed Winmore frequency. The ARRL is not to blame.

I'm glad we have our own private channels

Matthew,

Many thanks for the good info and for correcting my false impression of the signal presence detection.

And I think it was the client winmor station that was as wide as barn door Sunday night.

I am a winlink user and I do enjoy using it. It provides a very good connection with my friend at sea.

Thanks again for the info. I hope the ARDOP solution improves things for winlink, its users, and for those of us sharing the spectrum.

Regards,

W.T.

From: "Singer, Susan" <susinger@...>
Subject: ACS Activation

Due to the impending weather PEMA ACS will be activating this weekend.

The PEMA SEOC will be activated to an "enhanced" level on Friday evening. PEMA ACS personnel will be monitoring HF Voice Operations on 3.9935N LSB UHF and the Eastern Area Office will monitor 3.9875N LSB UHF. We will also be monitoring PaNBEMS on 3.5830N Olivia 1500 Hz 8/500. They will be taking reports of snowfall amounts from counties and others... Our hope is to keep the SEOC and our command staff informed with the most up to date information on snowfalls by location. This should provide a much more accurate picture of how bad it is in different parts of the state than the news would. It should also help us to keep PennDOT informed as to snow amounts and may directly affect their decision making about plowing roads. We don't expect the snow to hit until later in the evening but it may come in earlier. We hope that you will be able to reach us to share information on snowfall amounts. If you do not have UHF capability, please let me know what UHF or VHF frequencies you will be operating on and I will add your frequencies to my operational ICS-205 so that our guys can listen communicate with you. If this does not work, our landline in the radio room is 717-346-3101.

On Saturday morning both the PEMA SEOC and EAO will be operating in a Level 2 activation mode. Both radio rooms will continue to monitor. Using the daytime frequencies on the attached ICS-205. Western Area will have staff monitoring our Western Area channels as well. We expect to remain in an activated state until sometime on Sunday.

PEMA ACS would not be able to provide information like what is needed this weekend without the support that you, the ACS units, RACES, ARES and Skywatch teams that serve your county and local governments provide. It is truly a team effort. Those of you who know me know that I am sincerely grateful for your support. Much appreciated. I can be reached at the number below if you have any questions.

I quick follow-up.
I had a call with Susan Singer at PEMA today. What the Pennsylvania Emergency Management Agency is most interested in are first hand, measured reports on snowfall amounts. Other reports such as road conditions and power outages are also most certainly welcome.
I advised that we would try to transmit as many reports as possible with FLMSG so that the State EOC (SEOC) station monitoring could receive and record the reports with FLMSG rather than having to scroll through the raw received text.
I will not be in my station until at least 9:30 PM ET tomorrow night. I would advise any NCS volunteers to please ask that stations sending reports, when possible,use the "storm report" weather reporting form in FLMSG. But, please do not discourage any stations who don't have, or are not yet familiar with, FLMSG from reporting.
Thank you in advance for your participation.

Hello all,
Please continue to send your storm reports through the night regardless of whether you hear a Net Control Station.
Several paNBEMS stations including mine will be monitoring.
Send on 3.583 USB, 1500 Hz Center Waterfall with FLDIGI Storm Report form if possible.
Make sure you transmit RSID (TxID on FLDIGI enabled) with either Olivia 8/500 or MFSK-32.
Thanks to all who pitched in with reports tonight. We had a pretty good turn out and we'll be looking forward to seeing more throughout this weather event.

Dave:

ROGER

I'm used to working in a directed net with clearance to send and acknowledgement of receipt, but I see that this way works much better. No guarantee of successful transmission but the data doesn't seem to be critical. Maybe after the dust settles we can do some training on directed net procedures?

Much better net discipline this morning. Last night was a bit of rat-rope and rag chew. Had to wait 45 minutes to send a report to be sure I wasn't stepping on someone jumping on.

I'm a retired Army Signal Officer so I'm fixated on proper procedures and net etiquette. Old habits die hard, especially for us old geezers. Quite a different environment from Army MARS, but I guess it is what it is.

One suggestion – if we can get stations to proceed their TX window messages with two blank lines and follow with 3-4 it would greatly improve readability.

Thanks for all you do for Amateur Radio and Emergency Services support

Have reports from local operators in SouthCentral PA that even with RSID on, switch from Olivia to MFSK32 will NOT always automatically switch modes in FLDIGI. If station unattended most traffic sent after switch is lost. Even when operator is at station notice of switch modes needs to be given several times before actual switch. Jack KC3JD

Jack,

There's a reason why it's called NBEMS and not called "perfect".

RSID isn't a magic wand. It is a mode of it's own. If the signal is weak or interrupted, it's not going to work.

While monitoring even weak signals on the reports being transmitted last night on 80m, I was getting about 95% RSID detection.

If we had critical reports, we would be running a much more formal directed net where NCS would direct mode changes and traffic.

Also, NVIS antennae configuration helps a lot with our ops. My 66' doublet feed point is at about 15' above ground level.

7019. Weather Reports - Thank You!

Yahoo group: paNBEMS (2012 — 2018)
Date: 2016-01-24 02:17:06 UTC
From: David Kleber
Topic: 7010 Message: 7019

Thanks very much for all the weather reports over the last 24 hours.
I was able to copy at least 40 FLMSG messages in the Weather Report form at my station here in Pittsburgh.
I have not had any further communication from PEMA so I would advise to only send reports through tomorrow morning if your weather conditions change.
I'm sure that PEMA appreciates our response to their calls for reports.

All:
Due to recent storm activity, we (NJ State SP) had activated the SEOC (ROIC) to a level III begining Friday at 1800 hrs to 1800 hrs Sunday (today). As a result, I was away from home unable to serve as NCS for the NJ NBEMS Sunday morning Net. N3CRM copied a message I sent from the ROIC and offered to stand-by on frequency and advise any stations wishing to sign in to the Net, of the schedule conflict. This offer of support and cooperation is most appreciated, and exhibits the ability work together and find solutions on short notice.
Thank you Chuck and any other stations who may have provided support.

Special thanks to Chuck (n3crm), for standing up and helping out.
That's what Amateur Radio Emcomm is all about.
I'd like to see more statewide net liaisons jumping in to offer help to neighboring states. WV is starting a new net and we have OH, VA and NY who I'm sure would help PA if we needed it, but better coordination and active liaison stations from the various nets checking in on their neighboring nets would go a long way to help improve our communication on a regional basis.
Keep in mind that band conditions can, and often do, go long and help from relay stations can be critical. A perfect example of this on a much wider coverage net is the Maritime Mobile Net on 20m which has volunteers from all around the world, of which the net regularly relies on relay stations to help move messages.

7023. n1mm logger

Yahoo group: paNBEMS (2012 — 2018)
Date: 2016-01-30 17:59:04 UTC
From: Dave Frazier wb0kgn
Topic: 7023 Message: 7023

For the life of me, I can not figure out where to install FLdigi in n1mm logger so that it will work.
I have given n1mm a path inside the n1mm folder. didn't work (wasn't supposed to)
I gave it a path to a folder outside of n1mm+ folder. It didn't work. I even started over with a new installation of windows ten. Didn't help. Now that I have done everything that those of us who know nothing do, its time to ask for help

7027. Snow Reports

Yahoo group: paNBEMS (2012 — 2018)
Date: 2016-02-09 18:05:34 UTC
From: David Kleber
Topic: 7027 Message: 7027

Hello, all.
I saw that kb3nia (PA State EOC) was on 7.0725 USB earlier today.
There's no paNBEMS or PEMA/ACS activation that I am aware of, but your weather reports and snow accumulation reports are always welcome. If at all possible, use the WX/Storm report form in FLMSG and send with either Olivia 8/500 or MFSK-32. Please be sure to transmit RSID (TxID enabled in FLDIGI).

John,

Beaver is in PEMA Western Region, the PEMA Task Force Area is "Region 13".

I uploaded a csv file to the "Reference" file section. You should see the announcement from earlier today.

That's a good file to do some testing with using FLAMP or the file feature in FLMSG for your local nets. You might have a time-out issue over a repeater unless you're using really fast modes. FLAMP has settings to address the repeater time outs.

7037. WX macro editing question

Yahoo group: paNBEMS (2012 — 2018)
Date: 2016-02-20 12:53:01 UTC
From: ka8wmf@...
Topic: 7037 Message: 7037

Hi to all in the group, this is my first post. I have been playing with the WX macro. I do have it working well for my area, but I would like to edit it down so that not all the information gathered by the macro is displayed. Is there a way to edit this to send only the information I want to send out? I have looked at may of the WX posts and not really found what I would like to do. I am running fldigi V3.23.07.04 at this time.

thank you
Mike

From: Ron Wenig
Topic: 7037 Message: 7038

Hi Mike,

The easiest way is to click configure, MISC, WX and check only the values that you want to send. Be sure to enter the correct METAR station ID code. You can click Search on web to find the airport closest to you. Don't forget to click Save before you Close. Then create a Macro, mine is called wx and I have <WX:KPNE>.

Well, you are going to be slightly disappointed because it smoke and mirrors to a certain extent. Fldigi is a fine tool and so is Flamp but sending something this size on HF using MFSK-32 would take forever - if the images are included. The page itself is strictly HTML code averaging between 20K and 30K in size. This works well for a 25 to 30 minute file transfer. The page is built using Blue Griffon. Hey, I am no HTML coder. I am lucky if I can spell Linux. Just for reference this bulletin is really meant for the Luzerne County ARES members but so many people have asked for access to it I started sending it via Fldigi/Flamp on Sunday Nights so that KB3FXI, our paNBEMS net manager, and others could get to it. My philosophy is if you want it you have to work for it. If you can't copy it off the air I do put a .wav file on www.w3luz.org for those who want it to use Fldigi to play it back. Any way if you look at the images you'll see that they all link back to an Internet Server. Here is the link for the main ARES Logo.

So you can see, I cheat a bit. But I follow the philosophy of there is not such thing as fair fight. If you ain't cheating then your planning was flawed. I think it makes for an interesting read and I have gotten comments on it from many US locations and as far away as Great Britain (amazing how the prop on 80 meters does strange things). So my goal was to transfer information and make it interesting. If I succeed in that goal even though I do a little smoke and magic behind the scenes I think I win. After all a magician is supposed to be entertaining. When this started almost 2 years ago I used to put everything in small files controlled by macros. It took hours to get it ready to go but I will say I learned a lot about the Fldigi macros (how to turn off the transmitter to let the repeater reset for example) but I soon figured out that Flamp can do it all and in one file. And I could spend time on the content rather than the container. For those that want to see one without the work here is a link:
http://www.w3luz.org/dig_brd/Luzerne%20County%20Digital%20Broadcast%202016-01-10.html But after that one you have to go get them. 73 Regards, W.T. Real heroes do not wear capes. They wear dog tags and Badges! On Tue, Feb 23, 2016 at 5:15 PM, Dave Frazier wb0kgn wb0kgn@... Hello friends,

DigiDX is a new service providing DX news in MFSK32 via Channel 292 <http://www.channel292.de/> in Germany, 6070 kHz, 10 kW. The DigiDX test transmissions last weekend were mostly successful despite China Radio International and other stations on the same frequency at various times.

DigiDX MFSK32 transmissions will resume this weekend via Channel 292, 6070 kHz. One will be Sunday at 0200 UTC (Saturday 9 pm EST), with possible reception in the Americas. The other will be Sunday at 1100 UTC. You might hear DigiDX MFSK32 transmissions at other times during the weekend on 6070 kHz, and possibly via Radio 700 on 3985 kHz. Consult the DigiDX Facebook page, https://www.facebook.com/digidx, and its Twitter account, https://twitter.com/Digi_DX

Here is the lineup for VOA Radiogram, program 152, 27-28 February 2016, all in MFSK32 except where noted:

1:36 Program preview
2:45 China expands media controls*
11:07 Iran hardliners accuse BBC of interference*
15:42 Australia will increase defense spending*
21:35 Olivia 64-2000: Planned observatory in India
27:04 MFSK32: Closing announcements

Please send reception reports to radiogram@...

VOA Radiogram transmission schedule
(all days and times UTC):
Sat 0930-1000 5865 kHz
Sat 1600-1630 17580 kHz
Sun 0230-0300 5745 kHz
Sun 1930-2000 15670 kHz
All via the Edward R. Murrow transmitting station in North Carolina.

The Mighty KBC will transmit a minute of MFSK32 Sunday at about 0220 UTC (Saturday 9:20 pm EST) on 6040 kHz, via Germany. Yes, I know this conflicts with the DigiDX transmission this weekend. We will try to harmonize the digital mode schedules in future weeks. Reports for KBC reception and decode to Eric: themightykbc@...

Thanks for an increasing number of reports, including many new reports from Germany, where an article about VOA Radiogram was recently published in CQDL. I'm now compiling the gallery of MFSK32 images from program 135 (Halloween 2015!) and will respond to those reports over the weekend.

I hope you can tune in and write in this weekend.

Kim

Dave (w1hkj),
I just ran into an issue this morning on the paNBEMS net with the ICS-309... a good problem to have, I suppose.
The ICS only handles about 34 log entries. We maxed that out this morning with about 36 check ins.
Is there any way on the next FLMSG update that the 309 could be pushed out to maybe 60 entries? Anything beyond 60, such as a long term activation/operation, we could break down into multiple files but I like to keep the net ops on one file if possible and I doubt we would ever go over 60 check ins (but you never know).
Thanks,
-Dave, KB3FXIpaNBEMS Founder and PEMA/ACS Digital Manager

7050. how's this for service?

I just like the form. I like the time button so you don't have to manually enter the time (I know that can be done in a spreadsheet, too).
I use the 309 for logging check ins and for keeping track of traffic handling during our activations.
If we need to switch NCS stations, I can fire over the ICS309 to the incoming NCS and they have the record of who is checked in and where they are. Hitting autosend is nice and fast.
At the end of a net or activation, I use the export to CSV which allows me to merge CSV spreadsheets for record keeping purposes.
It just works well for us. A plain old spread sheet would work to.

Dave,I'm not currently active in ARES/RACES etc,but like to stay in touch with developments "just in case."I am curious why you use a 309 form to tracknet checkins. Why not use an flmsg plain text form or asimple CSV spread-sheet? The ICS-309 forms Ihave encountered have been titled "Message Log" , but regardless of title, Ibelieve the originalintent of the form, and its use in practicewherever I have encountered it, was to keep track of messages passed through astation -when and from whom received, when and to whomtransmitted - and were subsequently treated as admin/historical documents andNOT forwardedby electronic means.Acknowledging that I am out of touch and thatdifferent organizations do things differently, I am curious whether thisprocedure is common and whether itis a local idea or a wider-area mandate. It ismy belief that most ICS forms were designed for planning purposes and subsequentinternal use and neverintended to become radio messages. If oneneeded to send a message, one used a message form, not a log form.I'm just curious. Please enlightenme.Thanks. Bob,
The ICS-309 is built into FLMSG. Go to Forms, ICS and you will see it at the bottom of the list.
w1hkj will have another version on the 309 with 60 line entries on the next release of FLMSG, as per my request.

From: David Kleber
Topic: 7056 Message: 7056

Hello all,

I got my GP-5/SSB Shortwave SSB receiver yesterday and was able to pick up a light copy of the MIDTN (Michigan Digital Traffic Net) in my basement with only the whip antenna. Probably not a good enough copy for decode, but not too bad for the little receiver with only the whip.

I will be at work here in Pittsburgh in a retail store location from 10-8 ET both days.

I wonder if anyone could pitch in on a test schedule today (Fri Mar 4) and tomorrow (Sat Mar 5)?

If you're available for any or all of the following times, please send a short FLMSG test message on 7.0725 USB, 1500 Hz center waterfall at either 1 PM, 2 PM and 3 PM ET.

I will have the receiver on with the clip-on long wire and my Samsung Galaxy III phone ready to copy.

Thanks in advance for anyone who can help with the test.

location from 10-8 ET both days.

I wonder if anyone could pitch in on a test schedule today
(Fri Mar 4) and tomorrow (Sat Mar 5)?

If you're available for any or all of the following times,
please send a short FLMSG test message on 7.0725 USB, 1500
Hz center waterfall at either 1 PM, 2 PM and 3 PM ET.

I will have the receiver on with the clip-on long wire and
my Samsung Galaxy III phone ready to copy.

Thanks in advance for anyone who can help with the test.

Thanks, Ron.

It looks like negative copy. I didn't see any RSID detection on AndFLMSG either.

I had a light copy on Barry in EPA around 11:45 AM ET or so. He was chatting with a Canadian station, so I know this thing works.

Please try again later and we'll see if conditions change.

Please use either Olivia 8/500 or MFSK-32 and be sure to transmit RSID.

Thanks!

I got that one, too, Steve.

Also see you in QSO now with VE3RCD in Canada with about 85% copy on both of you. Not good enough to pull off FLMSG for 100% confirm but I'm still glad to see this is working. I may rig up a longer wire outside of our store here.

please send a short FLMSG test message on

7.0725 USB, 1500

Hz center waterfall at either 1 PM, 2 PM and
3

PM ET.

I will have the receiver on with the clip-on

long wire and

my Samsung Galaxy III phone ready to copy.

Thanks in advance for anyone who can help
with

the test.

Subject: [paNBEMS] Help me with GP-5/SSB Shortwave SSB receiver test?

Hello all,

I got my GP-5/SSB Shortwave SSB receiver yesterday and was able to pick up a light copy of the MIDTN (Michigan Digital Traffic Net) in my basement with only the whip antenna. Probably not a good enough copy for decode, but not too bad for the little receiver with only the whip.

I will be at work here in Pittsburgh in a retail store location from 10-8 ET both days.

I wonder if anyone could pitch in on a test schedule today (Fri Mar 4) and tomorrow (Sat Mar 5)?

If you're available for any or all of the following times, please send a short FLMSG test message on 7.0725 USB, 1500 Hz center waterfall at either 1 PM, 2 PM and 3 PM ET.

I will have the receiver on with the clip-on long wire and my Samsung Galaxy III phone ready to copy.

Thanks in advance for anyone who can help with the test.

I did copy some of the conversation. the AndFLMSG seems to have a hard time scrolling up through the raw text. I think it's really designed specifically for receiving FLMSG messages.

Thanks to all who jumped on today. I did receive copy on a few stations. I'm not sure if there were any others who tried but I couldn't copy.

I'll be on again tomorrow. In fact, I'll just leave it on to monitor all day on 7.0725 USB and then switch down to 3.583 USB from about 6-8 PM ET.

Ok Dave...I'm not sure what happened to the paNBEMS/yahoogroups message
that I sent. It looked like it was rejected so I sent you a private
email. But it looks like you received it in the group but it has a lot
of format coding in it. Very strange. I'm seeing other reports so
hopefully you picked them up.

That's interesting.
I only got 2 FLMSG messages here at home. One from Ron was a WX Report, the other was badfile with errors and no decode at all.
Well. I'm looking forward to seeing what I can copy tomorrow.
Thanks to all who sent some messages today.

Thanks, Brian.

Negative copy here.

It's pretty tough with the little clip on 15' wire antenna inside the building here.

We'll see if propagation picks up during the day.

I appreciate your test.

7074. GP-5/SSB Shortwave SSB receiver test - Mar 5, 2016

Yahoo group: paNBEMS (2012 — 2018)
Date: 2016-03-05 18:46:38 UTC
From: David Kleber
Topic: 7074 Message: 7074

Pretty good copy on kc3edp but errors on the FLMSG.

I wish I could get a good long random wire up above the store here. I'm quite surprised that I'm picking up as much as I am.

I'll be monitoring 7.0725 USB, 1500 Hz center waterfall until about 6 PM ET.

Olivia 8/500 FLMSG would probably give me the best chance to copy.

Good luck being a commercial structure. Could be allot of interference or desensitized.

Date: 2016-03-05 22:03:37 UTC
From: David Kleber
Topic: 7074 Message: 7079

Oh.... so close!

Both KC3EDP and KC8EGV (Cincinnati) sent FLMSG and both had only a few errors.

MFSK-32 isn't making it on the weak receive nearly as well as Olivia 8/500 (no surprise there).

Thanks for trying, folks. This will be fun to try once I figure out a better antenna.

I have a DELL Inspiron MINI. It has FLDIGI installed. I can get it to send and recieve messages using a headset. I tried to connect the speaker of my BAOFENG UV-5r to the mic of the computer. I get no audio input. When I connect the computer speakers to the radio mic it keys instantly upon connection.

Any ideas or advice.

7084. FlDigi with a Yaesu FT-897D

Yahoo group: paNBEMS (2012 — 2018)

Topic: 7084 Message: 7084

Listened in on the paNBEMS net this morning and was able to copy almost everyone and every message. Noticed that when in Digi mode on the radio FlDigi would detect the TXID and change Op Mode but would not decode anything. When I changed FlDigi from RTTY to USB, the radio would go into USB and I'd decode everything fine. So far so good. But I don't think I transmitted anything. Tried to check in a couple of times, but don't think anyone heard me. FlDigi was keying the radio but I don't think I was sending any audio. I tried sending with the radio in both Digi and USB, and even tried with the radio in USB and FlDigi in Packet USB. I've found on the 2 meter nets that voice goes out if FlDigi mode is FM and data goes out if mode is FM Packet. Everything works fine doing normal QSOs with PSK31 on HF. Has to be something out of synch between FlDigi and the radio while using USB (I think). My interface is a SignaLink USB. Anyone have any ideas what settings I might have crossed up for the paNBEMS Net in USB?

Thanks,

Chuck

Philip,
A few questions.

1. Did this problem start with the use of Windows 10?
2. Did DnD work with other versions of Windows on the same machine?
3. Would you be willing to run a modified version of FLAMP for testing purposes?

Robert

There is a setting in the submenus to configure the data port for upper or lower sideband. If it works in USB it should work with DATA assuming your are using the data port on the back side of the radio for audio in/out.

Subject: [paNBEMS] FlDigi with a Yaesu FT-897D

Listened in on the paNBEMS net this morning and was able to copy almost everyone and every message. Noticed that when in Digi mode on the radio FlDigi would detect the TXID and change Op Mode but would not decode anything. When I changed FlDigi from RTTY to USB, the radio would go into USB and I'd decode everything fine. So far so good. But I don't think I transmitted anything. Tried to check in a couple of times, but don't think anyone heard me. FlDigi was keying the radio but I don't think I was sending any audio. I am using the data port for input to the radio. I did see three settings in the Hamlib tab (which is what I'm using to control the radio) - Sideband = Rig Mode, Always LSB, or Always USB) and then options to select CW is LSB mode and RTTY is USB mode. That would set those values permanently, wouldn't it? All the other nets and while using PSK31 on HF use LSB, right? I could always add another config for the paNBEMS net so I'm in USB. I have two different configs now - one for the 897 and one for my HT, so adding a third is not a big deal. Am I understanding your suggestions correctly?

Thanks,

Chuck AB3WD

Your radio needs set to USB for HF and FM for VHF simplex/repeater use.
My SingalinkUSB is plugged into the data connector on the back of my
897 and works for both.
Make sure that windows is not changing your sound card settings.

Hello all,

I'm still having fun with my GP-5/SSB Countycomm shortwave receiver here at work in the Pittsburgh area.

If anyone is able to send out a short FLMSG message today on 10.135 USB, 1500 Hz center waterfall with Olivia 8/500 it would be appreciated.
If you'd like, include your email address in the message and I'll send you a reception report.

I'll have it on monitoring until about 7pm ET.

Thanks!

-Dave, KB3FXI

Agreed on your report, Barry.

Ron did a great job under poor conditions and it's probably best that he stuck with Olivia 8/500.

One thing we always have in our back pocket with paNBEMS and the level of participation that we have are the out of state stations that we can call on for relays when conditions go long.

When I first started working with PEMA, one of the first questions I asked was if they were good with us taking out of state stations for relay or even NCS ops and I was very glad to get a firm reply in the affirmative.

Never feel shy about putting some of our out of state check ins to work if they're willing to help out.

Subject: [NY-NBEMS] VOA Radiogram, 9-10 April 2016 [1 Attachment]

Hello friends,

The German communications regulator Bundesnetzagentur has changed its mind about allowing digital modes on shortwave broadcast transmitters in Germany. Apparently BNetzA thought that Channel 292 was transmitting the text and images in single sideband (SSB), which is how amateurs, military, etc, transmit the digital modes. Now that they know that the MFSK32 and other modes are sent as program audio on an analogue amplitude-modulation shortwave transmitter, their objections were withdrawn. (It's similar to A2A modulated CW.)

BNetzA prefers that the term MFSK32 not be used to describe these broadcasts, but we have to specify the mode so that you can set Fldigi or other decoding software to the correct mode. In any case, the weekly MFSK32 transmission will resume on The Mighty KBC, and DigiDX will return to Channel 292.

Meanwhile, VOA Radiogram this weekend will be all MFSK32 except for the transmission schedule in Olivia 64-2000 under the closing music.

Here is the lineup for VOA Radiogram, program 158, 9-10 April 2016, all in MFSK32 except where noted:

1:32 Program preview
2:46 China domain name rules*
11:58 South Korea blocks North Korea Tech website*
18:09 Mars Opportunity rover photographs dust devil*
23:01 Photo of migrant from RFE/RL Top Shots*
26:24 Closing announcements*
28:01 Olivia 64-2000: Frequencies under music
* with image

Please send reception reports to radiogram@voanews.com

VOA Radiogram transmission schedule
(all days and times UTC):
Sat 0930-1000 5745 kHz
Sat 1600-1630 17580 kHz
Sun 0230-0300 5745 kHz
Sun 1930-2000 15670 kHz
All via the Edward R. Murrow transmitting station in North Carolina.

The Mighty KBC will (after a one-week break) transmit a minute of MFSK32
Sunday at about 0220 UTC (Saturday 10:20 pm EDT) on 6040 kHz, via Germany.
Sometimes the MFSK32 is as late as 0228 UTC. Reports for this KBC reception
to Eric: themightykbc@...

DigiDX will broadcast DX news in MFSK32 (and perhaps other modes)
Sunday 2130 UTC 15570kHz via WRMI (Florida)
Sunday 2330 UTC 11580kHz via WRMI (Florida)
Monday 2000 UTC 6070kHz via Channel 292 (Germany)
Check http://www.digidx.uk/ for any changes or additions to this schedule.

Thank you for your reports to VOA Radiogram last weekend. I am now compiling
the MFSK image gallery from program 136 (November 2015) and hope to send that
out this weekend.

Fldigi saves decoded MFSK images as png files in the folder
\fldigi.files\images\
When you send a reception report, please attach those png files.

I hope you can tune in and write in this weekend.

Hello all,
I will be unable to run the paNBEMS bulletin net tonight.
Can anyone take the spot at 8:30 PM on 3.583 USB?
I can point you to the macro set and give you some guidance if you're willing to give it a shot.
Thanks in advance.

Subject: [NY-NBEMS] VOA Radiogram, 16-17 April 2016 [1 Attachment]

Hello friends,

Reception was good last weekend, allowing for successful decodes, including the nuances of the gray-scale images. Here is the photo of the migrant as decoded by Dmitry in Kursk, Russia, on 15670 kHz …

VOA Radiogram this weekend will include a seven-minute segment of Olivia 64-2000, so let’s hope for poor reception to give this slow-but-robust mode a workout. If reception conditions are good, try a cheap receiver, or a compromised antenna, or a location with electrical noise.

Here is the lineup for VOA Radiogram, program 159, 16-17 April 2016, all in MFSK32 except where noted:

1:31 Program preview
2:39 Octopus makes daring escape*
7:53 Kerry calls for more connectivity in poor countries*
12:42 Trolleybuses in Moscow to be retired*
16:10 Olivia 64-2000: Tiny spacecraft to explore space
23:21 MFSK32: Closing announcements*
*with image

Please send reception reports to radiogram@...

VOA Radiogram transmission schedule
(all days and times UTC):
Sat 0930-1000 5745 kHz
Sat 1600-1630 17580 kHz
Sun 0230-0300 5745 kHz
Sun 1930-2000 15670 kHz
All via the Edward R. Murrow transmitting station in North Carolina.

The Mighty KBC will have an extra digital mode transmission this weekend. The usual minute of MFSK32 is Sunday at about 0220 UTC (Saturday 10:20 pm EDT), on 6040 kHz, via Germany, part of KBC’s broadcast to North America Sunday 0000-0300 UTC. Eric van Willegen’s Giant Juke Box show will then be repeated to Europe, Sunday, 0800-1000 UTC, on 6095 kHz, also via Nauen, Germany. The MFSK32 will be at about 0920 UTC. Outside of Europe, you can listen via http://websdr.ewi.utwente.nl:8901/

DigiDX will transmit MFSK32 and possibly other modes …
Sunday 2130-2220 UTC - 15770kHz - via WRMI Florida
Sunday 2330-2400 UTC - 11580kHz - via WRMI Florida
Monday 2000-2030 UTC - 6070kHz – via Channel 292 Germany
Consult http://www.digidx.uk/ for any additions or changes to this schedule.

Thank you for your reception reports last weekend. In keeping with the pattern of alternating between oldest and newest reports, I am now compiling the gallery of MFSK images from program 158. I hope to start sending those out this weekend.

Please tune in and write in.

Date: 2016-04-18 02:20:55 UTC
From: David Kleber
Topic: 7112 Message: 7112

Hello all,
Here's a forward from the Bulletin net tonight...
####
PEMA Demo - HF Help Needed
Thursday April 21, 2016, PEMA will be conducting a demo and is requesting HF participants for digital ops. Times are 11:00am ET and 1:30pm ET - HF data 7.0725 1500 Hz center, Olivia 8/500 to start.
PEMA would like to receive some ICS-213 with exercise data such as roster data or other sample messages.
They would also like some picture transfers using Easy Pal, with example pics such as of that mornings newspaper from your area; time stamped photos of a non-flooding or actually flooding stream; and maybe a map of a local detour of real construction.
Any questions, please contact me at kb3fxi (at) yahoo (dot) com

####
We have not played with EasyPal for a long time but PEMA is looking for pics using this protocol.
It would be greatly appreciated if we could get some stations to pitch in and give this a go.
Here's the link for EasyPal...
http://www.g0hwc.com/easypal_program/EasyPal-07-OCT-2014-Setup.exe

I will be in and out of the shack this Tue and Wed to do some testing if anyone would like to join in. Look for us on 40m 7.0725 USB, 1500 Hz Center Waterfall, and lets see what we can do.
It would be greatly appreciated by PEMA if we could have several stations for the schedules for this Thursday on the air.
Thanks!

ARRL is asking that we keep 7.060 MHz clear as that frequency is being used for communications for the big earthquake in Ecuador:
http://www.arrl.org/news/radio-amateurs-asked-to-keep-7-060-mhz-clear-for-ecuador-earthquake-emergency-traffic

Dave,
What about us ops who don't have windows ? DRM is supposed to be
compatible, do you know for sure?

What frequency are you using for the image transmissions? I will try and
monitor if I can get DRM built in time??

Well, Jim... paNBEMS dropped the idea of EasyPal many years ago after some extensive testing, partly because it is not cross platform and also because it didn't perform well on anything but a very clean path. The latest version of EasyPal is listed as being last updated in 2014 but I have been told that it does work on Windows 10.

I'm just trying to meet the PEMA objective for the exercise.

Times are 11:00am ET and 1:30pm ET - HF data 7.0725 1500 Hz center, Olivia 8/500 to start.

I loaded EasyPal on my Win 7 machine but now have to try to figure it out.

We used to run EASYPAL on Army MARS until we began concentrating on more standard mil standard protocols. Worked fine on 4 MHZ NVIS depending on local propagation.

Back about 4 years ago, I got some spectacular results with EasyPal on 40m one evening with a few distant stations that were coming in very strong. But with the current conditions, I'm not so sure it's going to work so well. We're having a hard time copying Olivia 8/500 recently and those kind of conditions won't cut it with EasyPal.

I'd still like to see us give it our best shot.

An update. I think the easypal author passed last year.

Just found a new version of QSSTV, ver 9.1, released on Friday, it has
DRM in it, the Xmit bandwidth is 2.8 KHz and you need strong signals
according to what I have read this morning.. I will try and get it built
in time . I am not sure if it will build on Windows but it will on a
Raspberry Pi.

Is there a rationale for using this platform specific non-standard transmission mode that doesn’t work all that well?

It has almost every SSTV mode and "hamDRM", which AFAIK: is what EasyPal
uses. We would need to test it to be sure. I wish I had more time.

7123. Re: [paNBEMS] Thur April 21 PEMA Demo - HF volunteers needed

Yahoo group: paNBEMS (2012 — 2018)
Date: 2016-04-18 16:05:36 UTC
From: David Kleber
Topic: 7112 Message: 7123

Maybe someone can correct me if I'm wrong, but I think that EasyPal is it's own mode.

It has almost every SSTV
mode and "hamDRM", which AFAIK: is what EasyPal
uses. We would need to test it to be sure. I
wish I had more time.

None that I can think of other than the fact that you can pass much larger and higher resolution pics as compared to MFSK, but the cost is that you have to be on a near full quieting path.

I'm continually amazed with the fact that pictures are always so high on the list for the served agencies when we have the ability to haul massive amounts of data such as detailed spreadsheets and large plain text reports and authentic ICS form based messages.

But, I'm just trying to meet the request.

The fact that PEMA is using EasyPal was news to me just a few days ago.

Is there a rationale for
using this platform specific non-standard transmission mode
that doesn’t work all that well?

Yes there is because the means to run the modes (software in most cases) is steadily improving. What you perceive to have worked poorly (and I strongly disagree with that opinion) many have improved. Ongoing discussion should be encouraged as long as it stays at a professional level.

Dave,
Questions
Does PEMA have hams at the SEOC for this drill, that can tell them that this may not work?
As fickle as forty has been is it even feasible to try and send Images?

Doesn't sending a photo of the newspaper violate the copyright of the news paper?

NOTE: Switching to Contestia as the PA net did this week, I lost ALL copy of NCS and stations checking in, had no copy till the MSFK messages. So I did not checkin.

Unpaid work is not of a professional nature. A profession is what one
does for pay.

When you are unpaid, then your work is that of a volunteer or hobbyist,
no matter how good you may be at it.

- And there's nothing wrong with that, as long as you are not trying to
pass yourself off as a professional when you do it.

7134. RE: [paNBEMS] Thur April 21 PEMA Demo - HF volunteers needed

Yahoo group: paNBEMS (2012 — 2018)
Date: 2016-04-18 21:51:28 UTC
From: George Andrews
Topic: 7112 Message: 7134

I normally just lurk here, but the meaning of words needs to be understood correctly. So Charles, if a doctor or nurse volunteers his/her time (not receiving any pay!) for a clinic or a road race you would regard such work as unprofessional in nature??? You would object to such a doctor or nurse as calling themselves a “medical professional”.

How would you choose to describe such individuals?

Lawyers will take cases where they are not paid (yes, it does happen). Does that mean they are no longer professionals because they work without pay? The world is full of professional folks who volunteer as professionals and do so without pay. That does not change their status as professionals.

So, think about what you are saying.

This is off topic for the group. If you wish to talk about this further, please respond to my e-mail and not the group.

George Andrews

That’s too bad. I experimented with it, and concur, condx must be perfect. It will almost certainly fail.

We've had some good success with it through good VHF simplex or repeater paths. It's been used to send pics of an accident scene or for documentation during a race. However, it's been more of a "look at what we can do" thing as opposed to an essential element.

We used it a lot on our VHF NBEMS net when we were on the county repeater but our Maine linked system is too noisy for Easypal to be usable.

Hi Tom,

I’m a little confused by your insinuation that I am unpolite and unprofessional.

Anyhow, I apologize for I wrote that made you feel that way.

However, I am confused that you so strongly disagree, and have no with to upset you further.

I’m sure it will work well. And was wrong to write what I did.

During set up it does not mention Windows 8.1. Will it be OK?

Update...
PEMA is reconsidering the use of EasyPal so please put any test plans on hold as some other ops in PEMA agree that EasyPal will not support the objectives in the current band conditions. I apologize for the potential switch up.
In a few communications today, PEMA may be considering the use of MMSSTV or just using FLDIGI/MFSK-64 or MFSK-128 for any pic transfers.
I also forwarded on the fact that image transfers fall under voice/phone with the FCC and amateur radio service and technically we should be sending pics on the phone portion of the amateur bands. Thanks to K3EUI for the reminder on this rule.
I'll update as soon as I have any more information or clarifications.
Thanks.

Hello all,
Here's a forward from the Bulletin net tonight...
####
PEMA Demo - HF Help Needed
Thursday April 21, 2016, PEMA will be conducting a demo and is requesting HF participants for digital ops. Times are 11:00am ET and 1:30pm ET - HF data 7.0725 1500 Hz center, Olivia 8/500 to start.
PEMA would like to receive some ICS-213 with exercise data such as roster data or other sample messages.
They would also like some picture transfers using Easy Pal, with example pics such as of that mornings newspaper from your area; time stamped photos of a non-flooding or actually flooding stream; and maybe a map of a local detour of real construction.

Any questions, please contact me at kb3fxi (at) yahoo (dot) com

####
We have not played with EasyPal for a long time but PEMA is looking for pics using this protocol.
It would be greatly appreciated if we could get some stations to pitch in and give this a go.
Here's the link for EasyPal...
http://www.g0hwc.com/easypal_program/EasyPal-07-OCT-2014-Setup.exe

I will be in and out of the shack this Tue and Wed to do some testing if anyone would like to join in. Look for us on 40m 7.0725 USB, 1500 Hz Center Waterfall, and lets see what we can do.
It would be greatly appreciated by PEMA if we could have several stations for the schedules for this Thursday on the air.
Thanks!
-Dave, KB3FXIpaNBEMS Founder

Been standing by on 40 meters for an hour - nothing heard. Nothing on the local PEMA repeater either. Has the exercise been cancelled?

Subject: Re: [paNBEMS] Thur April 21 PEMA Demo - HF volunteers needed

Been standing by on 40 meters for an hour - nothing heard. Nothing on the
local PEMA repeater either. Has the exercise been cancelled?

<mailto:kb3fxi@...> [paNBEMS] <paNBEMS@yahoogroups.com
<mailto:paNBEMS@yahoogroups.com> > wrote:

Update...

PEMA is reconsidering the use of EasyPal so please put any test plans on
hold as some other ops in PEMA agree that EasyPal will not support the
objectives in the current band conditions. I apologize for the potential
switch up.

In a few communications today, PEMA may be considering the use of MMSSTV or
just using FLDIGI/MFSK-64 or MFSK-128 for any pic transfers.

I also forwarded on the fact that image transfers fall under voice/phone
with the FCC and amateur radio service and technically we should be sending
pics on the phone portion of the amateur bands. Thanks to K3EUI for the
reminder on this rule.

I'll update as soon as I have any more information or clarifications.

Thanks.

Subject: [paNBEMS] Thur April 21 PEMA Demo - HF volunteers needed

Hello all,

Here's a forward from the Bulletin net tonight...

####

PEMA Demo - HF Help Needed

Thursday April 21, 2016, PEMA will be conducting a demo and is requesting HF participants for digital ops. Times are 11:00am ET and 1:30pm ET - HF data 7.0725 1500 Hz center, Olivia 8/500 to start.

PEMA would like to receive some ICS-213 with exercise data such as roster data or other sample messages.

They would also like some picture transfers using Easy Pal, with example pics such as of that mornings newspaper from your area; time stamped photos of a non-flooding or actually flooding stream; and maybe a map of a local detour of real construction.

Any questions, please contact me at

kb3fxi (at) yahoo (dot) com

####

We have not played with EasyPal for a long time but PEMA is looking for pics using this protocol.

It would be greatly appreciated if we could get some stations to pitch in and give this a go.

Here's the link for EasyPal...

http://www.g0hwc.com/easypal_program/EasyPal-07-OCT-2014-Setup.exe

I will be in and out of the shack this Tue and Wed to do some testing if anyone would like to join in. Look for us on 40m 7.0725 USB, 1500 Hz Center Waterfall, and lets see what we can do.

It would be greatly appreciated by PEMA if we could have several stations for the schedules for this Thursday on the air.

Thanks!

Nothing heard here. Had the PSK Reporter spotting to see who I heard. K3CC, K3EUI, and one Ohio Station who indicated he was standing by for the demo.

Today was a waste of time... I listened to 40 and 60 meters at the same time.... All I heard was AAR5CH and other strange calls on USB 60 meters channel 1....

No digital signals anywhere... I also monitored 80 meters 3.583 mhz with my FT950....

I listen and called KB3NIA nothing from Harrisburg, PA.....

I did hear back from Don, K3DCS, who was at the Command and Communications Rally. They did have some very bad condx at the Rally. Here is an excerpt from his email to me:

"Sorry we weren't able to make contact with you. Thanks for having a message ready! Communications on 40M was tough for us, see first attached photo and you may figure why.... With all the vehicles running generators and/or 12V to AC inverters noise on 40M was running S9+. The "field station" at rally command managed to have a strong signal, longer path, 40M QSO with stations on a Navy net in the Great Lakes area. They also had a FLDIGI QSO with a station in Ohio. None of us were able to hear stations in PA on HF, the rally command station did a few CQ's but with the noise level they couldn't tell if anyone was answering. Due to HF band noise conditions we mostly passed traffic within the rally site using FLdigi and also MMSSTV photos taken at the rally. We were using a VHF simplex freq for rally site traffic."

The pix that Don mentions is attached. The group did a fantastic job of promoting Amateur Radio and while the 40 paNBEMS effort was a BUST it was still a success for Amateur Radio.

Very interesting. A lesson learned? If so it was a success.

I guess this could happen again in a real incident if anyone sets up their HF station in the middle of the command post gaggle. Possible solutions could include using a more remote HF operations site and relaying messages via wire, VHF/UHF, or courier. The HF station doesn't even need to be near the command post if adequate relay facilities are in place. The HF operator could even operate from home station. It might be a good idea to have several HF stations operating in this mode to provide backup and geographic dispersal.

During hurricane Donna, we in Willacy county of south Texas had one ham with VHF capability at the EOC, who relayed data to an HF station a few miles away, located in a residence. The eye of the hurricane moved directly over both locations. Both were hardened sufficiently to ensure reliable communications throughout the event.

Alternate HF and VHF resources were available for backup, but were not required.

The remote vhf-hf relay station operator could be elderly or handicapped and non-deployable. Some of these will have emergency power and some of them need it for medical reasons. No two EMCOMM operators are the same and they are not interchangeable. For hurricane Carla, several of us moved into the home of w5ong for the storm weekend, he had the generator. Groupings like this, serving as relay stations, could be a valuable resource for disasters.
The Ham "When all else fails" capability exists because of the pool of competent but vastly differing operators who collectively can solve nearly any problem. The challenge then is how to identify these, and provide meaningful training and experience.
regards, cullen K5HAL

[_Attachment(s)_ (mip://1a0a8868/default.html#TopText) from W. T. Jones included below]

I did hear back from Don, K3DCS, who was at the Command and Communications Rally. They did have some very bad condx at the Rally. Here is an excerpt from his email to me:

"Sorry we weren't able to make contact with you. Thanks for having a message ready! Communications on 40M was tough for us, see first attached photo and you may figure why.... With all the vehicles running generators and/or 12V to AC inverters noise on 40M was running S9+. The "field station" at rally command managed to have a strong signal, longer path, 40M QSO with stations on a Navy net in the Great Lakes area. They also had a FLDIGI QSO with a station in Ohio. None of us were able to hear stations in PA on HF,

the rally command station did a few CQ’s but with the noise level they couldn’
t tell if anyone was answering. Due to HF band noise conditions we mostly
passed traffic within the rally site using FLdigi and also MMSSTV photos
taken at the rally. We were using a VHF simplex freq for rally site traffic."
The pix that Don mentions is attached. The group did a fantastic job of
promoting Amateur Radio and while the 40 paNBEMS effort was a BUST it was
still a success for Amateur Radio.

Regards,

W.T.

Given the MUF (f0F2) on the 21st, it's unlikely that anybody in PA would have heard anybody else in PA on 40 meters.

The MUF barely reached 6 MHz, and that only for a few 15 minute periods. By operating at 1+MHz above the MUF, all you would have gotten was longer path QSOs. You can view the MUF here

Which then raises the question of what kind of antennas were you guys using. For comms within PA, which is about 280 miles long by about 160 miles wide, you would have been best off using NVIS antennas - which are horizontal antennas less than 1/2 wavelength above ground (and no, there is no such thing as a vertical NVIS, and no the don't have to be very low to the ground - about 1/4 wavelength is actually best).

I can tell you that on 4/21, Army and Air Force MARS successfully ran five nets within the state of PA ranging from early morning into mid-morning, mid-afternoon, and evening. The nets were at frequencies lower than 6MHz. The MARS people use NVIS antennas.

Sent: Monday, April 25, 2016 10:19 AM
Subject: [SATERNSouth] Severe Wx Moving Across So. Terr.

We begin this week with a strong weather front moving across the Southern Territory.

Later today conditions are expected to be severe and potentially dangerous for most of the Southern Plains states from Kansas City to Austin. Conditions are right to bring strong thunderstorms, possible tornadoes, and large damaging hail to the region. SKYWARN volunteers should be alert this afternoon.

This same front will move Eastward in following days and likely dump considerable rain where much has already caused flooding in recent days. Heavy rain and possible strong storms are expected to move into Western Arkansas and Northern Louisiana tomorrow with the Southern end bringing more rain to South Texas.

SATERN members in these states should make sure your equipment and property are secure and you have provisions on hand should the need arise. Be sure to test your standby power now before it is needed.

Members in other parts of the country are encouraged to hang out on the International SSB Net Frequency of 14.265 Mhz USB or the International Digital Net Frequency of 14.065 Mhz USB OLIVIA 8/500 +1000 (center freq. 14.066). Make sure your RxID is on.

If you have weather reports of conditions on the ground in your area that should be relayed to NWS, please use the Severe Wx Form in FLMSG to make the report. NWS is looking for first hand reports and measurements if available. They already have what is on TV and Cable so do not report well known conditions - only damaging winds, tornado sightings, and destructive lightning events you have witnessed are desired in your report.

Members who also serve as volunteers in other amateur services (like ARES) are encouraged to make SATERN known to them as you check in.
Should it become necessary to activate the SATERN So. Terr. 40 meter SSB Net or the International SATERN Digi Net...we will post a notice here.
Please be safe and take care of your family and property first.

Sent: Sunday, May 8, 2016 9:36 AM
Subject: [SATERNSouth] Severe Weather Moving Again [2 Attachments]

Once again severe weather is firing up with the midday heating in the Upper-Midwest and South Texas. The forecast maps attached show the broad areas affected.

This is significant given the tornado activity in the Denver area yesterday. These unexpected storms at very high altitudes spurred a series of forecasts as shown.

Ahead of these predictions, we have had several weekends that began with severe weather that spread out over the entire Southern Territory. The potential is once again upon us this week.

As shown in the forecast maps, tomorrow contains a possibility of severe weather entering MO, AR, and LA from the West moving quickly East. Conditions are right for the strong storms to continue for days with the higher temps and conditions during the day.

Members who participate in SKYWARN, ARES, or other sister agencies, should be on alert for these adverse conditions in your area.

We will continue to monitor the weather situation to make a decision on whether to activate the SATERN nets. Those of you interested in hanging out on the 20 meter net frequency (14.065 Mhz USB) are welcome to monitor the frequency in case local groups need assistance passing messages.

Stations within 1200 miles of Houma, LA can connect to my WinLink 2000 RMS Trimode station on 30 meters: 10.135 USB (dial) WinMOR only 24/7/365

BTW...the wildfires are still raging in Alberta Canada and threaten to move into Saskatchewan. The Salvation Army is on scene assisting with evacuation in several areas. The RAC (Canadian ARRL equivalent) has asked to keep emergency frequencies clear. Saturday, there was little activity heard from Jackson, but web activity indicates hams in Canada (including SATERN) are active on many frequencies in response to this event.

Hello everyone,

As some of you may know the Allegheny County Digital Training Net on the W3YJ repeater has been running for a couple of months now. The net has been setup to run on Sundays at 8:00PM on a bi-weekly basis. I have created an editable spreadsheet (link below) which contains the dates for the training net, and it is editable for anyone wanting to volunteer as net control. This net has as its main purpose to train people on the use of NBEMS system, but experimentation with other digital modes is highly sought and encouraged.

If anyone has any questions please do not hesitate to send me a message back or reply to this thread.

Spreadsheet schedule link: https://docs.google.com/spreadsheets/d/1rfKDgZrDGr8Ta36U1dlTywdX5Cazta-UQ7CPkcTsJqw/edit?usp=sharing https://docs.google.com/spreadsheets/d/1rfKDgZrDGr8Ta36U1dlTywdX5Cazta-UQ7CPkcTsJqw/edit?usp=sharing

Unpaid work is not of a professional nature. A profession is what one does for pay.

When you are unpaid, then your work is that of a volunteer or hobbyist, no matter how good you may be at it.

- And there's nothing wrong with that, as long as you are not trying to pass yourself off as a professional when you do it.

Dave,
Questions
Does PEMA have hams at the SEOC for this drill, that can tell them that
this may not work?
As fickle as forty has been is it even feasible to try and send Images?

Doesn't sending a photo of the newspaper violate the copyright of the
news paper?

NOTE: Switching to Contestia as the PA net did this week, I lost ALL
copy of NCS and stations checking in, had no copy till the MSFK
messages. So I did not checkin.

7169. re: APRS w/Raspberry PI

Yahoo group: paNBEMS (2012 — 2018)
Date: 2016-05-16 15:44:13 UTC
From: <k3cc@...>
Topic: 7169 Message: 7169

Welcome to Spring,
We had snow all day yesterday up here.... The loneliness has been working on my mind...

This summer our group will be putting on a demo for adults and kids....Our small group of ARES and VE's
have been searching for a way to entice more hams in public service and expand the average techs ability

Most tech buy a useless HT.... We are not city folks and with mountains ranging to 2500 ft ASL they have limited use..

As I thought of a way to increase the knowledge of techs I thought about APRS Tracking....

Byonics has a Tiny Tracker with built in GPS Under $120 And Hanson has a TNC/APRS for a Raspberry PI in kit form
(no SMD) for $40.... I purchased 2 kits and one of the Tracker/GPS.... I would like to use them with race or event
management.... The Raspberry PI and APRS is about the size of 2 packs of cigarettes....I have a 17 flat screen monitor
that I can mount the PI and APRS together on the monitor....Then interface it with a Yaesu FT 1900 for APRS and FM voice.
I an event when a person transmits the location will show on the screen, if they move you will follow them....Which will
locate the event station where ever he go...
Search and rescue events: the field Trackers will be located on the screen all the time and can be coordinated from a
base support team.... During the summer and hunting season we hear of lost folks and SAR Teams.... My hope is to support them
with APRS.....

Bottom line field trackers or searchers cost HT China $20 2 meter
$30 144/440....tracker $ 120.....
Support field station: Raspberry PI abt $100 complete APRS $30 in kit.....

I hope to this ready for a July demo.... Along with a Raspberry PI/Signalink FLdigi station.... for demo with 40 dipole.....

Any interest or questions ??? Anyone with experience in this SAR ???
Will it catch teens interest ????

Yup, I brought this to the attention of the Office of Physical Plant at
Penn State.

here is a useful dashboard:
http://www.swpc.noaa.gov/communities/radio-communications

Google for the 1859 Carrington event, and look for the effects on the
telegraph systems / stations of the day.
https://en.wikipedia.org/wiki/Solar_storm_of_1859

But don't worry, the White House will fix it!

.ja.

Greeting from Niles Hill Skip K3CC

Sunday the 40 meter paNBEMS 7072.5 Mhz Olivia 8-500 maybe 8-250 if needed....
I will use 2 receivers on different antennas for the net Vertical and horizontal.... Maybe it may help

The prop for tomorrow seems poor....

First I will ask for RELAY STATIONS Call NCS and offer to be a RELAY STATION I need West PA, Eastern PA and NJ

I will call for Stations with Traffic first.... If nothing hard I will ask for RELAYS
Please relay any stations that have traffic......

Tnx de K3CC

Hi all

something to think about here why not call out the region's the state has designated for task forces. Ie: north central covers. Bradford Clinton Lycoming Sullivan union Potter and Tioga counties.

This gives those in defined region's the ability to know who is who.

There is a map on pema site.

and to files/pets/

1112371 Jun 8 18:17 flmsg-3.0.pet

Date: Wed Jun 8 09:20:15 2016 -0500

Version 3.00.00
* New Version release

Date: Wed Jun 8 09:18:34 2016 -0500

License update in COPYING
* update license to GPL v3.x

Date: Mon May 30 07:09:19 2016 -0500

ARQ direct
* Added embedded flmsg specific ARQ file transfers
- uses fldigi's xmlrpc interface
- this is NOT compatible with the flarq ARQ implementation
- ARQ implementation does not use control codes
* Added direct receipt of flmsg "Autosend" message transfers.
- allows an executing flmsg to be recipient of autosend
data stream.
* Allow changing frame size during middle of transfer
* Update documentation to flmsg 3.0 usage

Please read me the new help file, either pdf, or zipped html, for
information on the ARQ usage. This version of flmsg requires fldigi

3.23.10 or newer.

Hi Roger,

Most days I can be found on 7.0725 mhz Olivia 8-500 1500 ctr We use only FLdigi....because of the message handling of FLAMP, FLmsg and FLwrap I'm the ARRL ARES EC for Potter County , PA in north central PA also a NCS for NJnbems and paNBEMS

FLdigi on VHF/UHF is fine but it maybe a problem with some controllers not passing all the tone....

First download the latest FLdigi, FLMAP,FLmsg and FLwrap....
Install them on a computer with a soundcard device Signalink is fine and least expense...
Configure the FLdigi soundcard, mic and speaker codec
Configure the autostart feature of FLAMP, FLmsg and FLwrap, test and make sure they work....
All digital is done on USB (upper sideband)
Right click on the macro's (buttons) write your macro's start with <TX> transmit end <RX> rcve

That’s a good start for you to be at this part
Sunday 0930 hrs EDST NJ NBEMS Net 7.0725 mhz 2000 ctr Olivia 8-500
1100 hrs EDST paNBEMS Net " " " 1500 " "
" "

Hello Roger,

The use on VHF/UHF is not to different then using it on HF. The bigger difference is sending data over repeaters. Of all of FLDIGI suite of tools FLAMP is the only one that takes repeater timeout into consideration. Using a modem thats transmits above 500 Hz on the low end should keep repeater tone filtering out of the equation in most cases. If you are not using a repeater then FLDIGI has a number of modems that can transfer data relatively quick in the narrow bandwidth of most ham radios. Test each modem in your geographical area to determine which one has the best performance. FLDIGI has a large selection of modems for the various conditions that you may encounter.

There are a number of external program outside of FLDIGI's developed programs that can be connected to FLDIGI via the various interfaces XMLRPC/ARQ/KISS over IP. Logging programs, BBS/Ax25 (BPQ32) and APRS (YAAC) to name a few. Search the web for those programs if you need further details.

Another program that is also nice and if you need compatibility with AFSK/Packet then using YAAC/BPQ32 with DireWolf is a good choice.

The program specified here are designed to operate on Linux, Windows and Macintosh operating systems and are not proprietary (GPL'd open source software).

Our local RACES has used digital modes within Fldigi quite regularly on VHF/UHF over the past several years, usually very successfully. This includes use of FLARQ and FLMSG . Use of NBEMS methods via VHF/UHF has been both via simplex and repeaters. When using repeaters remember that some repeater controllers are set to strip audio frequencies within a certain range and this can cause problems with digital modes. Our RACES set up procedures to eliminate the audio frequency restrictions during RACES nets. You also may need to supress time out features of a repeater and auto ID.

7184. NBEMS verses Winlink Express

Yahoo group: paNBEMS (2012 — 2018)
Date: 2016-06-16 16:05:57 UTC
From: roger.hendrixson2@...
Topic: 7184 Message: 7184

I am closely looking at NBEMS and Winlink Express for our RACES team.

We are beginners in the process and sill require some guidance.
Thank you all, in advance.

However I am on the fence as to which mode will best work for us.
So I need to compare both NBEMS and Winlink Express for what they can do or cannot do.

1. We will only be using VHF/UHF. Sorry we are not HF yet.

2. Mode must be as simple as possible to configure and operate.

3. Will need to be very affordable.
4. We have access to two local 2 meter repeaters and three DMR repeaters.
5. Some hams may not be able to afford a Signalink USB. (I already have one)
6. Two hams only have MAC computers.
7. Everyone else has Windows systems.

From what I know so far, both have advantages and I do not see as one being better than the other.
I put both modes together because many of you have experience with both.

These are the questions we are discussing.

a. Does FLDigi still need two operators to be on line to use?

b. Do both have error correction?

c. Do both have store and forward capability?

d. Do both use ICS and radiogram forms within the system?

e. Which mode requires less configuration, deviation adjustment, etc.?

f. Winlink Express uses internet to move traffic to the CMS and may me more redundant?
How is NBEMS redunatnt?

g. NBEMS can operate on both Windows OS and on a MAC OS. .

h. Winlink Express only on a PC system. No support for MAC OS.

As you can see, there are many considerations.

All comnents welcome.

Waseca, Minnesota has a training net that meets on two meters. We use FLdigi. The mode we use is psk125rc16 at 1750 words per minute. One member of the group uses strictly audio coupling...speaker to microphone...and even at that speed it works perfectly, so an interface is not necessary; HOWEVER, the faster mode you use, the more imprtant it is that both receive and transmit audio levels be set up properly. Practice/training is important.

It is possible to send FLmsg's to an unattended station. They can pile up/bee stored there and read later.

32/2000 Olivia extends the distance that a repeater can be used and is one of the very best weak signal modes.

Using FLdigi's FLamp program, repeater time-outs of short duration can be accommodated.

I will leave to others the comparison of FLdigi to WINLINK.

Couple of comments:

Any audio device including a computer speaker and microphone can be used with fldigi. We have had a CCAR member using acoustic coupling (microphone to radio speaker, computer speaker to radio microphone) on several weekly repeater-based nets.

At a state-operated shelter during the Eastern PA ice storm a few years back, I setup a brand new ham with a laptop and a loaned signal link in under 15 mins. Although the software has lots of switches and dials and settings, nearly all the defaults work our of the box.

Unattended receipt of messages is possible. Anyone who can hear the repeater can be recieve a message.

Anyone who can talk through the repeater can send a message.

There is no Internet requirement, only the radio. in absence of a repeater, it's possible to go simplex if you can get to the other person, or relay through stations to get to the end point.

Never used Winlink because of the Internet dependecy and some complexity of the software setup.

Regards and 73's,

Dave, KB3YCK

Roger,

You may want to consider packet for a local FM ARES/RACES team.
It will do it all those things and there are free soundcard programs that will do the job without having to buy a TNC.
If you want to provide reliable, local, FM ARES/RACES EmComm text messaging the fastest, least expensive, most reliable and easily implemented way today is sound card PACKET.

AX25/Packet Radio is available when used with BPQ32. But you need configure the AGW packet engine or use UZ7HO soundcard modem:

An easier way is to install a sound card program that incorporates packet. A very nice, free sound card packet modem and sound card terminal program is available from UZ7HO:

Go to: http://www.cantab.net/users/john.wiseman/Documents/UZ7HODriver.ht

His sound card modem also works with Outpost. Outpost (free) is a messaging tool designed for EmComm. It is in wide use on the West Coast. Outpost has forms and will automatically query and download messages and bulletins from packet bulletin boards. Is compatible with Telenet and WinLink. A local Packet Bulletin Board would act as s server for messages and bulletins.

Go to: http://outpostpm.org/

I’m hoping that the Fldigi gurus will eventually build an infrastructure like Packet to provide all those services you and I seek.

Subject: [paNBEMS] NBEMS verses Winlink Express

I am closely looking at NBEMS and Winlink Express for our RACES team.

We are beginners in the process and sill require some guidance.

Thank you all, in advance.

However I am on the fence as to which mode will best work for us.

So I need to compare both NBEMS and Winlink Express for what they can do or cannot do.

1. We will only be using VHF/UHF. Sorry we are not HF yet.

2. Mode must be as simple as possible to configure and operate.

3. Will need to be very affordable.

4. We have access to two local 2 meter repeaters and three DMR repeaters.
5. Some hams may not be able to afford a Signalink USB. (I already have one)
6. Two hams only have MAC computers.
7. Everyone else has Windows systems.

From what I know so far, both have advantages and I do not see as one being better than the other.
I put both modes together because many of you have experience with both.

These are the questions we are discussing.

a. Does FLDigi still need two operators to be on line to use?

b. Do both have error correction?

c. Do both have store and forward capability?

d. Do both use ICS and radiogram forms within the system?

e. Which mode requires less configuration, deviation adjustment, etc.?

f. Winlink Express uses internet to move traffic to the CMS and may me more redundant? How is NBEMS redunatnt?

g. NBEMS can operate on both Windows OS and on a MAC OS. .

h. Winlink Express only on a PC system. No support for MAC OS.

As you can see, there are many considerations.

All comnents welcome.

Hi Roger,

From our perspective in Maine:

We use both but for different purposes.

NBEMS VHF/UHF - virtually all in-county messaging simplex or through fixed duplex repeater or cross-band portable repeater. If we have full or close to full quieting, PSK250RC5 is almost always error free. If noisy, we can use flamp. If a station is on frequency, it can still receive and save files. An operator can pick up, forward from there as time permits. Mixed voice and digital on VHF/UHF is a real plus. 1 to many means that in marginal conditions, it's easy for someone to do a relay.

Winlink Express - pretty much for out of state or for radio-email to a commercial email address. For any message requiring a form, we use the flmsg forms, not the "only works with Winlink Express" forms.

We have a number of BPQ packet BBSes (RF only) and we use Winlink Express as the client for those. Attachments can be handled.

I'd say we actually use NBEMS far more.

For sound card interfaces you can use audio coupling but there are some very simple interfaces that can be had as built or kit that will work with NBEMS. Audio coupling doesn't work well in noisy environments. Look at Easy Digi on ebay as an example.

DMR is a different animal. Voice only but I think there's a piece of proprietary software that can be used to send files. Slowly.

I'd say go for NBEMS, easy to set up, extremely flexible, cross platform, tremendous support. If you need long haul digital capability you can always try to convince your EMA director to get a HF set up at the EOC with interfaces, modems, etc.

I should add, we have used NBEMS very successfully on HF across the state and to neighboring areas. We also use it as an interface to NTS. The most flexible system around. Period.

I use both also,

.

There is every reason to have both in your ARES/RACES tool kit. Some Fldigi soundcard programs will work well on 2 meters. The soundcard programs are far – far superior to packet on HF. Roger is not HF capable at this time and setting up a HF station is expensive. As local ARES/RACES start up he may want to take a look at the advantages that Outpost offers. Packet does not need repeaters and is not subject to atmospheric and man-made anomalies.

It becomes a question of his perceived need.

For me – I wouldn’t be without either.

In Georgia ARES uses NBEMS, Winlink2000 and D-STAR (and D-RATS) as our messaging systems. As was stated in an earlier post, even though there is some overlap in what the processes can do, they are each a different animal. We have several state-wide and local nets that use one or more in combination. Good to have all three tools in the toolbox. NBEMS is essentially a stand-alone system – no Internet (HF and UHF/VHF). WL2K uses the Internet but can also operate in a stand-alone mode and peer-to-peer (HF and VHF Packet). Winlink is a very redundant system.

If you can't sell it, you can't use it. If you don't have a system now, pick the easiest sell...which might not be the Cadillac. And, as kb3fxi says, if you can't play with it, you are less likely to be able to use it when you really need it.

To those who might try to sell packet in southern Minnesota, I suggest that they also keep their confederate money.

Hello Ken,
The only current running issue with FLDIGI and MaxOSX has to do with version 10.11. Apple has not resolved the USB sound card stack. Has a bad habit of changing output devices without your intervention. This effects many programs even ones that have nothing to do with hamradio. If you are running older versions of MacOSX then it's pretty stable.
I did read another post, where someone created another account on there computer and ran FLDIGI from there. Haven't hear of any further issues from that person. This would suggest incompatibility with third party software, but who knows.

Topic: 7202 Message: 7202

The following was posted to the NBEMSham group and, so far, got one negative response. Please pardon the cross posting.

As we are preparing for Field Day, we would like to know if anyone has successfully interfaced FLDIGI with N3FJP software.

We have been using N3FJP for all of our FD logging for a number of years except our digital station.

The following is from an N3FJP discussion group.

Thanks for your interest in connecting N3FJP Software with FLDigi. The API is all set on my end, so that's a question you should pose to the FLDigi folks.

There may be a third party bridge program coming to enable a connection, but I don't want to speak out of turn on that.

73, Scott
N3FJP
http://www.n3fjp.com

Thanks
73

7207. 10 years - time for a break

Yahoo group: paNBEMS (2012 — 2018)
Date: 2016-07-11 01:14:01 UTC
From: dave.kleber@...
Topic: 7207 Message: 7207

Hello all,

I've been at the paNBEMS nets for 10 years now and I'm now standing down.

I made the following bulletin tonight on the paNBEMS Bulletin Liaison net:

paNBEMS Bulletin Liaison Net
July 10, 2016
kb3fxi@yahoo.com

####

Last Bulletin Transmission from KB3FXI

Tonight will be the last bulletin transmission from my station.

Work, family and personal commitments are becoming too much for me to keep my radio schedules.

Perhaps some other stations will step in to continue the weekly paNBEMS bulletins here on 80m.

Any stations who are interested in helping may join the paNBEMS yahoo group.

Thanks to all who copied our bulletins and provided reports. And thanks to the handful of stations that checked in as liaison stations with reports from other nets.

73

-Dave Kleber, KB3FXI
paNBEMS Founder

####

End of Bulletin

Dave Kleber, KB3FXI
paNBEMS Founder

kb3fxi at yahoo dot com

So, after a long run with paNBEMS, it's time for me to step aside.

I will probably have to start working even longer hour in my job and have other personal and family obligations that just don't afford me the time to do all I should do to support this project.

I have always run the paNBEMS group as an open organisation, with loose guidelines and have no plans on appointing anyone to take the lead as I step down. I'll leave it to those who continue to support the paNBEMS nets to collaboratively decide what direction to take the

paNBEMS nets into the future.

Thank you VERY VERY much to all who have spent many hours contributing to the paNBEMS project. We have a lot to be proud of as we have been the lead for many other digital HF nets all across the country.

I will hopefully be able to upgrade my station here sometime this year. I'm on my backup antenna and don't have the time or money to make any changes right now, but I will certainly be at the ready for any activations that may come about.

Thanks again, all. I'm hopeful that paNBEMS, in one form or another, continues our tradition of readiness, practice and actual deployment in the service of our State and each other.

Dave,

Sorry to hear that you are standing down. You were one of the reasons that peaked my interest in digital data especially NBEMS as a means of communications in emergency services. The Pa NBEMS net has been a template of how other areas conduct there nets and for that you should be proud. I know about the pressures of your occupation and I've often wondered how you had the time to do such a great job with Pa NBEMS. Good luck with everything and I know you will be around to mentor and help the members of the group.

Hello all,

I've been at the paNBEMS nets for 10 years now and I'm now standing down.

I made the following bulletin tonight on the paNBEMS Bulletin Liaison net:

paNBEMS Bulletin Liaison Net

July 10, 2016

kb3fxi@...

####

Last Bulletin Transmission from KB3FXI

Tonight will be the last bulletin transmission from my station.

Work, family and personal commitments are becoming too much for me to keep my radio schedules.

Perhaps some other stations will step in to continue the weekly paNBEMS bulletins here on 80m.

Any stations who are interested in helping may join the paNBEMS yahoo group.

Thanks to all who copied our bulletins and provided reports. And thanks to the handful of stations that checked in as liaison stations with reports from other nets.

73

-Dave Kleber, KB3FXI

paNBEMS Founder

####

End of Bulletin

Dave Kleber, KB3FXI

paNBEMS Founder

kb3fxi at yahoo dot com

So, after a long run with paNBEMS, it's time for me to step aside.

I will probably have to start working even longer hour in my job and have other personal and family obligations that just don't afford me the time to do all I should do to support this project.

I have always run the paNBEMS group as an open organisation, with loose guidelines and have no plans on appointing anyone to take the lead as I step down. I'll leave it to those who continue to support the paNBEMS nets to collaboratively decide what direction to take the paNBEMS nets into the future.

Thank you VERY VERY much to all who have spent many hours contributing to the paNBEMS project. We have a lot to be proud of as we have been the lead for many other digital HF nets all across the country.

I will hopefully be able to upgrade my station here sometime this year. I'm on my backup antenna and don't have the time or money to make any changes right now, but I will certainly be at the ready for any activations that may come about.

Thanks again, all. I'm hopeful that paNBEMS, in one form or another, continues our tradition of readiness, practice and actual deployment in the service of our State and each other.

Thanks for all you have done Dave. Your net got our Maine group going
with NBEMS back in 2010.

Our VHF net is still going strong on the state-wide linked system but
the HF net has been off and on (currently suspended).

No big deal! Replacing Dave will be real easy !

Seriously , I and others tried to do what Dave and Harry did and failed miserably . Before they started NBEMS activities , I tried to start a group in western NY. I had alpha copies of FLDIGI with NBEMS. After a few futile months , I gave up. Dave and Harry are responsible for much of the nationwide adoption of NBEMS and Dave essentially established a de facto standard for an HF digital net .

Thanks for all your help Dave .

Subject: [paNBEMS] 10 years - time for a break

Hello all,

I've been at the paNBEMS nets for 10 years now and I'm now standing down.

I made the following bulletin tonight on the paNBEMS Bulletin Liaison net:

paNBEMS Bulletin Liaison Net
July 10, 2016
kb3fxi@yahoo.com

####

Last Bulletin Transmission from KB3FXI

Tonight will be the last bulletin transmission from my station.

Work, family and personal commitments are becoming too much for me to keep my radio schedules.

Perhaps some other stations will step in to continue the weekly paNBEMS bulletins here on 80m.

Any stations who are interested in helping may join the paNBEMS yahoo group.

Thanks to all who copied our bulletins and provided reports. And thanks to the handful of stations that checked in as liaison stations with reports from other nets.

73

-Dave Kleber, KB3FXI
paNBEMS Founder

####

End of Bulletin

Dave Kleber, KB3FXI
paNBEMS Founder

kb3fxi at yahoo dot com

So, after a long run with paNBEMS, it's time for me to step aside.

I will probably have to start working even longer hour in my job and have other personal and family obligations that just don't afford me the time to do all I should do to support this project.

I have always run the paNBEMS group as an open organisation, with loose guidelines and have no plans on appointing anyone to take the lead as I step down. ?I'll leave it to those who continue to support the paNBEMS nets to collaboratively decide what direction to take the paNBEMS nets into the future.

Thank you VERY VERY much to all who have spent many hours contributing to the paNBEMS project. ?We have a lot to be proud of as we have been the lead for many other digital HF nets all across the country.

I will hopefully be able to upgrade my station here sometime this year. ?;I'm on my backup antenna and don't have the time or money to make any changes right now, but I will certainly be at the ready for any activations that may come about.

Thanks again, all. ?I'm hopeful that paNBEMS, in one form or another, continues our tradition of readiness, practice and actual deployment in the service of our State and each other.

Just a note to let you know I posted a new video about setting up the sound levels on a SignaLink USB for digital comms. Seemed like I was getting a lot of folks having issues & needing to figure this out. It's at my YouTube channel (or do a search for K4REF). Please pass it along to anyone you think might benefit from it.

Setting Up SignaLink USB Sound Levels

From: philip.shaver@...
Topic: 7225 Message: 7225

In using Flwrap on both a Mac and Windows 10 using fldigi version 3.23.12 and flwrap 1.3.4 and Flmsg 3.00.00. The Windows 10 will not allow me to insert a plain text file into Flwrap using DOD, the window or the icon. Flmsg will not allow the file be inserted in the blue DOD either.
Works well on the MAC. Do you have a solution?

Ken,
I have used my MAC Book Air with FLDIGI for a couple of years now and have not experienced any problems. My computer is thin and lightweight which makes it great for field day and other mobile events. I use a Signalink sound card interface and a Z817 tuner with my FT817 and a wire antenna.
Best,
Paul

Does anyone have a source for the VOA Radiogram .wav files? I was experiencing an issue with fldigi starting up flmsg on 7/17 and I wanted to try it with another VOA Radiogram program (the audio file I recorded was too noisy to switch).

Thanks,
Eric, W7CSD

Thanks but I was looking for a raw .wav file to pipe into fldigi. I could attempt to re-route the audio configuration in the settings but since YouTube isn't an external source, I doubt it would import into fldigi. Maybe I'm missing something here???

Thanks,

Eric,

Depending on if you have one or two computers...

Either way down load the latest as it has the best copy.

Just play the video on one computer to the other using audio coupling or
do as I do and play it on the same computer and it works.

I have noticed that a lot of users are over thinking things and making
the systems overly complicated which is why they end up having problems.

Piping a raw '.wav' file into fldigi is not going to work in my opinion
as fldigi is (in my mind) designed to take the info from a radio audio
feed not from a file transfer at GB/second transfer rate.

Maybe I am missing something but I keep things as "KISS" as possible.

This is a quest to find those stations that would like to be relay stations for the 11:00 AM paNBEMS Net...

If you check in to our net and hear most of the stations you can qualify as a relay station for the NCS of the day....

Another requirement would be the ability to receive and resend FLMSG and FLAMP

If you need help to find and resend I can be on 7.0725 mhz daily from about 10 am to 2 PM

Out of state station are FB Tnx for your time

The paNBEMS Net has been on the PEMA website for a long time....Sunday Mornings we have the RACES/ACS nets of SSB starting at 8 AM
The paNBEMS net is not the only net folks check into during Sundays....From about 8AM you have the PA RACES/ACS, Eastern PA, Central PA and Western PA nets on 80 meter phone.
Confusion may start as to where do I go from here ? Last week I heard all the stations check in.... How about learning to increase your stations antennas
and learn to deal with the relay system.... Maybe you have forgot about the American Radio Relay League I wonder why they chose that name ?

Subject: Re: Options for NBEMS state wide nets

Pa, NJ, NY NBEMS net controls

OK

I come from Quaker circles where we reach a consensus before we act ..... hi Maybe we talk too much and act too slowly.
I am the newbie here, so I don't want to behave like a dictator for PA NBEMS.
I feel that Skip and Dave have strong feelings that they want to stay with 40 m
and just learn to live with the limitations... and they've bet at this for years.

I think the NJ and NY net controls see the same thing I see..... fickle forty
is just not capable of nvis 10-100 mile prop within our state.
And by 11 am there is too much absorption by the D layer to move the net to 80m

so I will be on 3583 kHz (usb dial freq) Sunday morning at 8:00 am (tomorrow)
and see how many of you on this mailing list hear me.

Maybe we keep the old net name for 40m and try something new like the "MidAtlantic NBEMS Net" for PA, NJ, and NY stations: 3583 kHz, Sunday at 8 am local, Olivia 8/500.

Barry

Barry et al,

N9NMR was a constant listener of my Sunday Night 10:15PM 80 Meter Fldigi ARES broadcast.

I think I said it before - lets move on the 8AM 80 Meter Sunday Morning Net. We are suffering Analysis Paralysis here. It will either fly or it won't. Put the announcement on the paNBEMS forum and lets see how it works. You can analyze this until the propagation worm turns or we can get on with it and see how it goes. I say lets get it going.

NY, NJ, PA NBEMS GROUP

WN3LIF WT

WT, thanks for clarifying the relay station's calls from last Sunday's PA net.
I could barely copy you, and we are about 100 miles apart.
The relay, WB0KGN is in Minn, almost 1000 miles from us in EPA.
The other N9 station is in Wisconsin I think.

The objectives of the NJ, NY, and PA nbems nets are the same; to develop intra state EMCOM capability and be able to use FLMSG and FLAMP to relay messages in an emergency.
We are also trying to train folks in nbems skills.

What does it say about a PA NBEMS net when our two relay stations are hundreds of miles away, and most of us can't hear each other?

I'll do the best I can with this Sunday's PA NBEMS net but if the ncs can't copy most of the stations in PA trying to check in, that also means that
they cannot copy the net control either.

So how do stations know when to TRY to check in if they can't hear the net control? That makes for an almost impossible situation.

Options
I know there is resistance to changing what has been admittedly a very successful
40 meter PA NBEMS net to any other time, or any other band ..... but

I would sure like to try, for a month or two, running a net on 3583 kHz (below the
vertical critical frequency) at 8 am well before the Sun starts to warm up and
ionize the absorbing D layer of the ionosphere.
The net need not be on a Sunday, conflicting with church time for many.
The PEMA voice nets are all on 75 meters around 9 am.

60 meters
We've been trying 60 meters (Ch. 1 and 3) and I like it, but I hear the
opposition to nbems on 60 m based on limited channels and the fact
that many older rigs won't transmit on 60m. Of course, the band is ideal
for NVIS in terms of propagation characteristics.

TESTS
For the next week, I will listen and transmit a CQ on 3583 kHz (Olivia)
to check on propagation within 300 miles of my qth near Philadelphia.

I will ask the NJ and NY nbems folks if they are available at 8 am to listen
for my signal. I'll be using 50 w into a low (20 ft high) NVIS full size dipole.
If needed I can go to a higher power (up to 500 watts).

The most desirable band to operate a statewide nbems net would be if everyone
can hear the NCS..... that is the absolute requirement.
That means we must operate below the vertical critical frequency ... which
has been around 6 MHz lately. Operating a state net on 7 MHz is just
asking for frustration. Yes, I know it has worked in the past, but the Sun is going
in the direction of minimum sunspots, so the skip zone is only going to get worse
over the next 6 years.... and is especially bad now during the summer.

It looks like 80 meters, early morning or early evening (any day of the week)
gives us the best chance of us all hearing stations within a 300 mile radius
of the NCS.

Any opinions?

Who were the "relay stations" you relied on for the Sunday net,
and how far from you were they?

If for each 40 m net, we can team up and have two ncs on each side of the
state, then that would cover PA, even with a skip zone of 30-150 miles.

One of the stations that reliably checks into the NY and NJ nbems nets is
Duane, N6RVA. I will ask Duane if he would be willing to be my

"alternate ears" for this Sunday's net.

Barry

7240. Re: [paNBEMS] Re: Options for NBEMS state wide nets

Yahoo group: paNBEMS (2012 — 2018)
Date: 2016-08-06 00:20:11 UTC
From: W. T. Jones
Topic: 7239 Message: 7240

Skip,

Our Eastern RACES net starts at 9:00AM so no conflict there. K3EUI is one of the NCS.

The 40 meter net can stay in place and still be run. If we get some check-ins that is all well and good. And we might just get some folks who can't make the 11:00AM on the 8:00AM.

I'll be there at 8:00AM on Sunday. I'll be leaving for Pike County about 8:45 but I'll be there for the 8:00AM net.

Barry - lets get an announcement on paNBEMS as soon as you can with the particulars. I am looking forward to it.

Regards,

W.T.

7241. Time for NBEMS development phase 2.

Yahoo group: paNBEMS (2012 — 2018)
Date: 2016-08-06 14:25:02 UTC
From: Andrew O'Brien
Topic: 7241 Message: 7241

With the recent discussion about US State nets for the various NBEMS groups in mind, I wonder if NBEMS folks might want to consider a more formal approach. I think the timing for a next step towards formalizing things is good as we reach the end of Dave and Harry's involvement in the structure they set up for PA.

I would agree with some of the recent comments that 40M does not work well for some nets, but I have also been involved with NBEMS nets when 80m was a terrible choice too. I have also been involved in exercises where both 80 and 40M were unsuitable for emcomm nets covering a 20-30 miles radius .

I wonder if it is time to "steal" the structure of something like NTS national wide system or the MARS structure for nets? In MARS for example you have a defined region, a system of "minor relay stations" that run and fetch traffic from a larger geographical network of "major relay stations" and they even have a intercontinental structure for when something like Europe to USA when traffic needs to be relayed .

I was about to write that regional state to state NBEMS nets don't work. I think I would be wrong in saying that. What might be more accurate is that they DO work , but the present system makes them very inefficient . Nets take to long with seemingly endless check-in routines and poor propagation requires multiple re-transmissions of traffic. The geographical characteristics of a particular net do not match the propagation characteristics needed to achieve the net's goals.

A nationwide NBEMS system might look like ...

USA split in to a North, South, East, West "divisions"

Divisions split in to "regions" consisting of several contiguous states.

Regions split in to states and counties within that state.

Major relay , minor relay , and county relay stations established.

Division, Regional, State, and County nets established (daily)

When Divisional, Regional. or State nets are held they are 'all business", no chit-chat or rounds of comments. No long call-up routine. Example.... NCS starts by simply IDing and stating the net is active and NCS lists traffic if he /she has any. e,g "Net hold traffic for Region 3" or "net holds traffic for Delaware state". A trained operator from those regions or states then identifies and offers to take traffic. NCS also asks if anyone is bringing traffic to the net , if someone lists traffic NCS asks for someone that can take the traffic. A net with no traffic could be authorized to "secure" after 10 minutes , some current NBEMS nets take more

than 30 minutes just for the check-in procedures. These nets, while focusing on efficient traffic passing, would also serve as training experience for the impromptu local RACES/ARES nets that are needed when a local emergency/disaster occurs (learning how to operate digital modes, net protocols, moving stations from frequency to frequency,)

I'm sure other can improve on my thoughts... but since Harry and Dave in PA, Charlie in NY, and others have done such a good job of getting us this far, I think it is time to make a major step towards improving the NBEMS net efficiency. It is no longer a debate about the technology, NBEMS pioneers have proven that the suite of applications in Fldigi do work for error free traffic passing. The next focus is on the NBEMS structure.

Andy

I like that idea, it's something I wish I could take part in on my end of the country. My time is 7:45 am and the Satern Digital starts (My Time) around 09:00 am. The bands are not even open. I barely copy AZ, UT, and CA unless they are pointing their beam this way. Until we get out of the propagation toilet. We need to do something. In my area, they are not to many NBEMS users. I need to be able to connect with Western US States to become better with FLDIGI and 80 m doesn't do it on my end either.

Andy,
    I agree with Don, it probably is time.Here in the Atlanta and Georgia areas we have local EMA groups and State Wide as well. Putting a regional net together (as you suggest) would only complement the already growing pockets of NBEMS Nets.

This runs counter to the entire concept behind NBEMS, and introduces a totally useless mission that would be very difficult to effect.

We need statewide - and nationwide NBEMS networking about like we need cancer.

The job of NBEMS is to move data in and out of a disaster or emergency area, typically 100 miles or less, though the NVIS antenna system recommended for NBEMS operation can move data further if required.

NVIS antennas, being much simpler and easier than most other HF antenna systems to set up, can be erected within the area being served, and so easily communicate with NBEMS stations on the periphery of the affected area, where good internet connections will exist.

That is all that is really necessary, or required... Long-distance communications and permanent infrastructure are not required at all. - In fact they are counterproductive.

For a deeper understanding of the NBEMS concept and its simplicity, read the following article. The article explains in detail, with images, exactly why an attempt to establish statewide and especially a nation-wide NBEMS network would be a silly and counterproductive waste of resources:

http://www.sgarn.org/forum_library/index.php?topic=31.0

There is no need for a "NBEMS phase 2", a thinly veiled attempt to undermine NBEMS, so that it winds up being a third-rate version of the obsolete, failure-prone and counterproductive WinLink network paradigm. - Instead of the first-rate system that NBEMS already is.

40 and 80 meter nets that are not using NVIS antennas will of course experience difficulties, especially with the noise level on those bands. This problem is greatly alleviated if the recommended NVIS antenna systems are used. It is made much worse by any ill-conceived attempt to utilize antennas associated with DX. so- if you are not using NVIS antennas for your low-band practice nets, then you are doing it wrong and of course will be experiencing difficulties.

Let us not be talked into jumping on a bandwagon bound for uselessness and obsolescence. - We already have WinLink for that.

This runs counter to the entire concept behind NBEMS, and introduces a totally useless mission that would be very difficult to effect.

We need statewide - and nationwide NBEMS networking about like we need cancer.

The job of NBEMS is to move data in and out of a disaster or emergency area, typically 100 miles or less, though the NVIS antenna system recommended for NBEMS operation can move data further if required.

NVIS antennas, being much simpler and easier than most other HF antenna systems to set up, can be erected within the area being served, and so easily communicate with NBEMS stations on the periphery of the affected area, where good internet connections will exist.

That is all that is really necessary, or required... Long-distance communications and permanent infrastructure are not required at all. - In fact they are counterproductive.

For a deeper understanding of the NBEMS concept and its simplicity, read the following article. The article explains in detail, with images, exactly why an attempt to establish statewide and especially a nation-wide NBEMS network would be a silly and counterproductive waste of resources:

http://www.sgarn.org/forum_library/index.php?topic=31.0

There is no need for a "NBEMS phase 2", a thinly veiled attempt to undermine NBEMS, so that it winds up being a third-rate version of the obsolete, failure-prone and counterproductive WinLink network paradigm. - Instead of the first-rate system that NBEMS already is.

40 and 80 meter nets that are not using NVIS antennas will of course experience difficulties, especially with the noise level on those bands. This problem is greatly alleviated if the recommended NVIS antenna systems are used. It is made much worse by any ill-conceived attempt to utilize antennas associated with DX. so- if you are not using NVIS antennas for your low-band practice nets, then you are doing it wrong and of course will be experiencing difficulties.

Let us not be talked into jumping on a bandwagon bound for uselessness and obsolescence. - We already have WinLink for that.

And yet, NBEMS needs willing bodies to be listening when a disaster hits and ready to pass on any messages received, which is why practice nets exist, is it not? When the number of participants in a net is insufficient to provide coverage in a potential affected area, the system is flawed.

To: NBEMSham@yahoogroups.com
Subject: Fw: Net proceedure and operation

Local Nets can use Packet for wider coverage then repeaters.... We support PEMA with paNBEMS not outside of the state of PA.....
Most of our winter nets are used to compare realtime snow reports with NOAA radar from State College....These realtime report
local VHF/UHF nets on voice or digital.....Some of the report I have taken on 40 meters paNBEMS were not in a message format.

Organization:
Local digital training on VHF/UHF nets using all stations in a locale , resending the info via a HF station direct to
PEMA KB3NIA or via our paNBEMS Net on FLdigi....
Summer time nets are reports of damage via wind, rain and lightening....
reports of Downburst are of interest to NOAA...
What we are talking about our Sunday Net is a small window of time when 40 prop is poor....a few hours or so....

If there is a major disaster the VHF/UHF local nets will be very important to help direct emergency aid.... I that case FLdigi
has the FLmsg forms to deliver messages via ICS formats to local and state agencies....

Each county ARES EC should have a working digital net to support local governments....If things were to work correctly, county
EOC's would have RACES/ACS and ARES folks working with them..... This may never happen.... This would be a spider like network.
Info to and from the disaster site and hospital via FLdigi.....local road conditions or road blocks.... etc....

Of course this would take planning on the local, county and state level......Section voice nets should provide instructions on their weekly nets with EOC coordination.... Not just a check in net, but a training net...if not weekly at least once a month....There is a severe lack of training on voice and digital nets in Western PA...Very poor cooperation of county EOC's who lack knowledge of amateur communication readiness and interoperation with local and county emergency units...

de Skip K3CC EC Potter CO.

Sent: Friday, August 05, 2016 6:12 PM
To: panbems@yahoogroups.com
Subject: re: Net proceedure and operation

How about learning to deal with local VHF/UHF nets and then relay the checkin's up to the 40 meter net ?

Start local nets on VHF/UHF, training resending FLAMP, and FLmsg relay the local net folks who can not hear the 40 meter net....
Run more then 1 net but on separate bands as you would in the state of emergency !!!

We do not do this just for fun...We are supposed to be trained and ready for any disaster or emergency....

When the shit hits the fan you can't think....it must be an auto response....You do not learn HOw TO during any disaster or emergency

I have spent many hour during the winter months requesting snow fall amounts on road surfaces from local VHF/UHF folks....Any roof cave ins came from local folks on VHF then we sent response to PEMA and then to FEMA from the PA headquarters as in Lancaster/York area a few years ago.....

During the winter time if we are activated we support PEMA with realtime data which they can not get from WX NOAA...We confirm or change the data from NoAA by adding realtime events.... The state monitors snow fall on roads and from our nets.....

Learn to deal with the prop....Work local VHF/UHF nets and check that into the HF net with relays if needed.... But LEARN how to deal with conditions as they are..... When we are needed we do not pick the time......I covered 14 hours straight during the winter at midnight then relieved
in the afternoon.... These are TRAINING NETS not hello, good bye ! In Potter County we loose electric and telephone during storms, I need back electric
I deal with it....Get more folks involved including the techs on the repeaters.....Teach them how to use FLdigi or even voice....Create FLAMP and FLmsg that can
be sent via digital messaging.....If necessary, draw a diagram of local repeater coverage and train have you EC or ACS work with you ..... Find a HF station
that has coverage and can handle message via FLDIGI on 40 or 80 meters....

I guess the operative WORDING is TEAM WORK !!!

Good Luck de Skip

Let’s be careful about starting up more “stuff”. Don’t be creating another solution in search of a problem. I’m not saying that people shouldn’t find new and entertaining ways to play with it, but emergency communications must remain a primary mission, and NBEMS is just another tool in the bag. It is NOT a cult.

To be effective Emergency Services organizations should have NBEMS and voice nets organized and train in a formal, structured environment. Too many nets I monitor are just digital rag chewing sessions. Oh, and they should be prepared to use all available resources – VHF, UHF, HF on multipole bands, Dstar, HSMM - whatever the organizations can support.

Remember, emergency communications is not a game, it’s real-world, life and death serious. Train and operate accordingly..

On 8/6/2016 9:25 AM, 'Andrew O'Brien' k3ukandy@... <mailto:k3ukandy@...> [paNBEMS] wrote:

With the recent discussion about US State nets for the various NBEMS groups in mind, I wonder if NBEMS folks might want to consider a more formal approach. I think the timing for a next step towards formalizing things is good as we reach the end of Dave and Harry's involvement in the structure they set up for PA.

I would agree with some of the recent comments that 40M does not work well for some nets, but I have also been involved with NBEMS nets when 80m was a terrible choice too. I have also been involved in exercises where both 80 and 40M were unsuitable for emcomm nets covering a 20-30 miles radius .

I wonder if it is time to "steal" the structure of something like NTS national wide system or the MARS structure for nets? In MARS for example you have a defined region, a system of "minor relay stations" that run and fetch traffic from a larger geographical network of "major relay stations" and they even have a intercontinental structure for when something like Europe to USA when traffic needs to be relayed .

I was about to write that regional state to state NBEMS nets don't work. I think I would be wrong in saying that. What might be more accurate is that they DO work , but the present system makes them very inefficient . Nets take to long with seemingly endless check-in routines and poor propagation requires multiple re-transmissions of traffic. The geographical characteristics of a particular net do not match the propagation characteristics needed to achieve the net's goals.

A nationwide NBEMS system might look like ...

USA split in to a North, South, East, West "divisions"

Divisions split in to "regions" consisting of several contiguous states.

Regions split in to states and counties within that state.

Major relay , minor relay , and county relay stations established.

Division, Regional, State, and County nets established (daily)

When Divisional, Regional. or State nets are held they are 'all business", no chit-chat or rounds of comments. No long call-up routine. Example.... NCS starts by simply IDing and stating the net is active and NCS lists traffic if he /she has any. e,g "Net hold traffic for Region 3" or "net holds traffic for Delaware state". A trained operator from those regions or states then identifies and offers to take traffic. NCS also asks if anyone is bringing traffic to the net , if someone lists traffic NCS asks for someone that can take

the traffic. A net with no traffic could be authorized to "secure" after 10 minutes , some current NBEMS nets take more than 30 minutes just for the check-in procedures. These nets, while focusing on efficient traffic passing, would also serve as training experience for the impromptu local RACES/ARES nets that are needed when a local emergency/disaster occurs (learning how to operate digital modes, net protocols, moving stations from frequency to frequency,)

I'm sure other can improve on my thoughts... but since Harry and Dave in PA, Charlie in NY, and others have done such a good job of getting us this far, I think it is time to make a major step towards improving the NBEMS net efficiency. It is no longer a debate about the technology, NBEMS pioneers have proven that the suite of applications in Fldigi do work for error free traffic passing. The next focus is on the NBEMS structure.

7250. Re: [paNBEMS] Re: [NBEMSham] Time for NBEMS development phase 2.

Yahoo group: paNBEMS (2012 — 2018)
Date: 2016-08-07 01:11:38 UTC
From: James Rayburn
Topic: 7241 Message: 7250

One basic issue is similar to volunteer fire companies. The amateur radio operators are few and far between. On top of that how many of them have an interest or desire to participate in the emergency communications. How many have previous experience with emergency traffic? How many want to create a solution that may sound good but be too complex for all to feel comfortable with. Other people repeatedly downgrade other operators which can deter people for participating. We all should act as mentors when we have the experience but even then we should remove arrogance from our communication.

I know it is difficult but we need to remember K.I.S.S. Hoping that most people understand what I mean.

Another part is people may have interest but not the resources (my station has been off the air for the last 9 months due to a move).

Subject: Fw: Net proceedure and operation

Local Nets can use Packet for wider coverage then repeaters.... We support PEMA with paNBEMS not outside of the state of PA.....
Most of our winter nets are used to compare realtime snow reports with NOAA radar from State College....These realtime report
local VHF/UHF nets on voice or digital.....Some of the report I have taken on 40 meters paNBEMS were not in a message format.

Organization:
Local digital training on VHF/UHF nets using all stations in a locale , resending the info via a HF station direct to
PEMA KB3NIA or via our paNBEMS Net on FLdigi....
Summer time nets are reports of damage via wind, rain and lightening....
reports of Downburst are of interest to NOAA...
What we are talking about our Sunday Net is a small window of time when 40 prop is poor....a few hours or so....

If there is a major disaster the VHF/UHF local nets will be very important to help direct emergency aid.... I that case FLdigi
has the FLmsg forms to deliver messages via ICS formats to local and state agencies....

Each county ARES EC should have a working digital net to support local governments....If things were to work correctly, county
EOC's would have RACES/ACS and ARES folks working with them..... This may never happen.... This would be a spider like network.
Info to and from the disaster site and hospital via FLdigi.....local road conditions or road blocks.... etc....

Of course this would take planning on the local, county and state level......Section voice nets should provide instructions on their

weekly nets with EOC coordination.... Not just a check in net, but a training net...if not weekly at least once a month....There is a severe lack of training on voice and digital nets in Western PA...Very poor cooperation of county EOC's who lack knowledge of amateur communication readiness and interoperation with local and county emergency units...

de Skip K3CC EC Potter CO.

Subject: re: Net proceedure and operation

How about learning to deal with local VHF/UHF nets and then relay the checkin's up to the 40 meter net ?

Start local nets on VHF/UHF, training resending FLAMP, and FLmsg relay the local net folks who can not hear the 40 meter net....
Run more then 1 net but on separate bands as you would in the state of emergency !!!

We do not do this just for fun...We are supposed to be trained and ready for any disaster or emergency....

When the shit hits the fan you can't think....it must be an auto response....You do not learn HOw TO during any disaster or emergency

I have spent many hour during the winter months requesting snow fall amounts on road surfaces from local VHF/UHF folks....Any roof cave ins came from local folks on VHF then we sent response to PEMA and then to FEMA from the PA headquarters as in Lancaster/York area a few years ago.....

During the winter time if we are activated we support PEMA with realtime data which they can not get from WX NOAA...We confirm or change the data from NoAA by adding realtime events.... The state monitors snow fall on roads and from our nets.....

Learn to deal with the prop....Work local VHF/UHF nets and check that into the HF net with relays if needed.... But LEARN how to deal with conditions as they are..... When we are needed we do not pick the time......I covered 14 hours straight during the winter at midnight then relieved
in the afternoon.... These are TRAINING NETS not hello, good bye ! In Potter County we loose electric and telephone during storms, I need back electric
I deal with it....Get more folks involved including the techs on the repeaters.....Teach them how to use FLdigi or even voice....Create FLAMP and FLmsg that can
be sent via digital messaging.....If necessary, draw a diagram of local

repeater coverage and train have you EC or ACS work with you ..... Find a HF station
that has coverage and can handle message via FLDIGI on 40 or 80 meters....

I guess the operative WORDING is TEAM WORK !!!

Good Luck de Skip

Packet can be good for local data communications on VHF. A good alternative would be to use NBEMS software on VHF, with the appropriate digital mode.

Either one can be done with soundcard software and a VHF transceiver... I prefer the NBEMS route, as packet is subject to being misused by Winlinkers.

So I'm going to put on my "stupid" hat and ask a question regarding NBEMS and VHF.

My experience with VHF Packet goes back to the TNC-2 days where the only option was a hardware TNC into either a 286 computer or VT-100 Terminal. What I would like to know is what are the current recommendations and configurations for using NBEMS on the VHF band? Can we still use our hardware TNCs or do we have to build a sound card interface?

My current VHF "setup" consists of a Kenwood TM-V71A connected to a KPC-3 which in turn is connected to a iMac through an FTDI serial to USB adaptor. I haven't seen any configuration documentation regarding NBEMS on VHF. I know I can boot into WinDoze and run RMS Express and still use my hardware TNC to communicate.

I'm just trying to educate myself on what the current thoughts regarding VHF communications are. I'm not looking for a flame war, just some thoughts on what is currently being used out there and what flavor is the easiest to sell to the masses.

So is the NBEMS software, and even packet itself, for that matter. We need to stop this pointless bickering over what is the best for use in EmComm and use whatever works best in a given situation.

Characterizing discussions and disagreements as bickering is overkill. Those disagreements that can be backed up with facts
can be useful, and those of us who don't have all the facts can be helped by those who do. There are in fact solid reasons why packet might not be best. Still, if there exists a good packet system, it might be useful.

From: n9nmr1@...
Topic: 7256 Message: 7256

I never thought of my antenna as "NVIS".... But for your information, I use a G5RV dipole antenna approximately 15' in the air. My QTH is a suburb of Milwaukee WI and the rig is an FT100. I think that is about 350 mi from PA.

WB0KGN (Dave Frazier) is my neighbor to the West (Minnesota). If you are interested, Minnesota has a very consistent digital net on Thursdays at 8pm (CDT) on 3583.5.

Good discussion - keep it going!

73, Carl/N9NMR

I agree with what Charles said (shock !) if we keep in mind the original mission of NBEMS and his 100 mile NVIS idea. So, why do we have nets that are designed for much wider areas ? My original thoughts were based on my perception that such nets are terribly inefficient. Charles is correct in that I have seen local nets be VERY efficient.

7258. Re: [paNBEMS] Time for NBEMS development phase 2.

Yahoo group: paNBEMS (2012 — 2018)
Date: 2016-08-06 21:36:15 UTC
From: charles brabham
Topic: 7241 Message: 7258

A large number of HF net participants during an emergency will tend to tie things up, slow things down. It is on the VHF/UHF frequencies utilized for tactical, shorter range communications that a larger number of volunteers are needed.

Practice nets on HF are good for training, but just as it is with the real thing, too many participants will only breed confusion and slow things down.

I live in a remote desert town, with the nearest neighboring towns 25 miles away, the nearest city 65 miles away, and the nearest large metro area 125 miles away. All of these are well within the range limitations of NVIS antennas, and the likelihood that emergency communications to any place located further away is going to be required are vanishingly small. (Nearest working internet, remember?)

Two, or at most three dedicated amateurs practicing from each town or city within this area should be more than sufficient. This is a feature of NBEMS, not a bug, when you consider the typical difficulty in obtaining competent and dedicated volunteers.

Trying to establish state-wide or national practice nets would be particularly stupid, as they would serve no rational purpose. If and when an emergency or disaster strikes my town, we will need one (1) contact with one of the surrounding towns or cities within easy NVIS range to handle the HF end of our emergency communications. That is ALL that will be needed - and having to deal with anything more will slow down communications, not speed them up.

So, we may hold practice nets with each of the communities in range, but during a real event, all but one will be asked to listen in and stand by.

Of the two or three volunteers needed for HF communications in each town, one or two will be asked to listen in, stand by, or rest up so they will be ready to act as a relief operator after a while. Remember that the idea is to move data to the nearest functioning internet connection, not socialize.

I happen to know that you are a Winlink enthusiast, Matthew, so you might want to save your troll questions and disparaging remarks for some other egroup.

Good points. Packet is another tool in the bag, just like all the other ones. In the area I work, NBEMS is a mainstay means, but for RACES work we also use others like Dstar 1.2 GHz and HSMM to name a few. whatever it takes to move the customers' traffic.

Characterizing discussions and disagreements as bickering is overkill. Those disagreements that can be backed up with factscan be useful, and those of us who don't have all the facts can be helped by those who do. There are in fact solid reasons why packet might not be best. Still, if there exists a good packet system, it might be useful.wb0kgn

So is the NBEMS software, and even packet itself, for that matter. We need to stop this pointless bickering over what is the best for use in EmComm and use whatever works best in a given situation.

The only stupid question is one that isn't asked.
NBEMS is a sound card based application suite. You can build or buy an interface, or use acoustic coupling (hold the Mike near the speaker.) As Ling as you get the beeps and squawks across the radio link, you're going to communicate. Most people buy an interface like a Signaling box. Less than $100 new and the work great for any sound card based protocols.
My TNC has sat on the shelf for years now, and isn't likely to see action against.
Some radios like the FLEX SDR gear have built-in sound card capability.
Hope that's a start to answering your questions.
Tom. KB3TQS

-------- Original message --------From: "yahoo@struble.net [paNBEMS]" <paNBEMS@yahoogroups.com> Date: 8/7/16 12:36 (GMT-05:00) To: paNBEMS@yahoogroups.com Subject: Re: [paNBEMS] Fw: Net proceedure and operation

So I'm going to put on my "stupid" hat and ask a question regarding NBEMS and VHF.
My experience with VHF Packet goes back to the TNC-2 days where the only option was a hardware TNC into either a 286 computer or VT-100 Terminal. What I would like to know is what are the current recommendations and configurations for using NBEMS on the VHF band? Can we still use our hardware TNCs or do we have to build a sound card interface?
My current VHF "setup" consists of a Kenwood TM-V71A connected to a KPC-3 which in turn is connected to a iMac through an FTDI serial to USB adaptor. I haven't seen any configuration documentation regarding NBEMS on VHF. I know I can boot into WinDoze and run RMS Express and still use my hardware TNC to communicate.
I'm just trying to educate myself on what the current thoughts regarding VHF communications are. I'm not looking for a flame war, just
some thoughts on what is currently being used out there and what flavor is the easiest to sell to the masses.

Charles,

The issue that Ohio Section ARES is running into with their Statewide NBEMS Net is that only 4 of the 10 ARES Districts in the state are consistently represented each week. How is a ham in an area that's affected during a disaster supposed to get traffic out of his area if the surrounding counties in his district or neighboring ones are not practicing at all when there is no disaster? My interest in Winlink is somewhat irrelevant to the discussion here since its not the statewide standard for EmComm in Ohio.

I'm puzzled over what I'm reading about large numbers of stations on an HF net tying things up. Yes, I guess of you had poorly trained operators and a weak NCS that could happen. For short hop local work VHF/UHF repeaters and simplex work fine. Great resources. What about situations where they are down or non-existent? HF NVIS or long haul have and will work. I regularly work in HF nets with 15 – 20 or more stations passing digital traffic. Nobody told us that it would slow us down.

Consider mixed-mode nets. Some of us think that we shouldn't use voice on a RTTY frequency, or RTTY/data on a phone frequency. Under normal circumstances that's good band citizenship. In an emergency, consider running nets where traffic is controlled and coordinated with voice and passed it with digital. Non-amateur services do this all the time and it works quite well. It does require trained operators and a certain degree of discipline.

Tom KB3TQS

From: paNBEMS@yahoogroups.com [mailto:paNBEMS@yahoogroups.com]

To: paNBEMS@yahoogroups.com
Subject: Re: [paNBEMS] Time for NBEMS development phase 2.

A large number of HF net participants during an emergency will tend to tie things up, slow things down. It is on the VHF/UHF frequencies utilized for tactical, shorter range communications that a larger number of volunteers are needed.

Practice nets on HF are good for training, but just as it is with the real thing, too many participants will only breed confusion and slow things down.

I live in a remote desert town, with the nearest neighboring towns 25 miles away, the nearest city 65 miles away, and the nearest large metro area 125 miles away. All of these are well within the range limitations of NVIS antennas, and the likelihood that emergency communications to any place located further away is going to be required are vanishingly small. (Nearest working internet, remember?)

Two, or at most three dedicated amateurs practicing from each town or city within this area should be more than sufficient. This is a feature of NBEMS, not a bug, when you consider the typical difficulty in obtaining competent and dedicated volunteers.

Trying to establish state-wide or national practice nets would be particularly stupid, as they would serve no rational purpose. If and when an emergency or disaster strikes my town, we will need one (1) contact with one of the surrounding towns or cities within easy NVIS range to handle the HF end of our emergency communications. That is ALL that will be needed - and having to deal with anything more will slow down communications, not speed them up.

So, we may hold practice nets with each of the communities in range, but during a real event, all but one will be asked to listen in and stand by.

Of the two or three volunteers needed for HF communications in each town, one or two will be asked to listen in, stand by, or rest up so they will be ready to act as a relief operator after a while. Remember that the idea is to move data to the nearest functioning internet connection, not socialize.

I happen to know that you are a Winlink enthusiast, Matthew, so you might want to save your troll questions and disparaging remarks for some other egroup.

Mixed-mode operation on HF is not legal. It is however legal on VHF and above.

Contact with a large number of stations, or with stations more than 100 miles or so away are unnecessary, and counterproductive on HF.

For practice nets, the number of participants can be larger, but it should be understood that in a real emergency, a large number of participants will slow things down - to no purpose.

Whether packet fails or not on VHF, then a VHF NBEMS net may operate as you suggest.

On HF, the idea is to get data in and out to another station that is outside of the disaster area, and so has good internet access. Two stations working together, one in the disaster area and one just outside of it can do this best. Additional stations will just tend to slow things down, for the obvious reason.

There is nothing "puzzling" about two stations passing data more efficiently if not having to waste time dealing with additional stations that serve no useful purpose.

That is up to the ARES folks in Ohio.

I would guess that if you are trying to put them all in one
state-encompassing net, or trying to DX the whole state, that many may
be deciding to drop out, and reduce the confusion.

If the Ohio NBEMS folks are not doing things right, then it should not
be surprising if they experience difficulties and participation issues.

This is what happens when you grab the tool by the wrong end.

Topic: 7241 Message: 7265

Along with mixed mode nets, training bulletins. And letting bulletins count as traffic for those who care.
I forget things. Need retraining.

Subject: RE: [paNBEMS] Time for NBEMS development phase 2.

I’m puzzled over what I’m reading about large numbers of stations on an HF net tying things up. Yes, I guess of you had poorly trained operators and a weak NCS that could happen. For short hop local work VHF/UHF repeaters and simplex work fine. Great resources. What about situations where they are down or non-existent? HF NVIS or long haul have and will work. I regularly work in HF nets with 15 – 20 or more stations passing digital traffic. Nobody told us that it would slow us down.

Consider mixed-mode nets. Some of us think that we shouldn’t use voice on a RTTY frequency, or RTTY/data on a phone frequency. Under normal circumstances that’s good band citizenship. In an emergency, consider running nets where traffic is controlled and coordinated with voice and passed it with digital. Non-amateur services do this all the time and it works quite well. It does require trained operators and a certain degree of discipline.

Subject: Re: [paNBEMS] Time for NBEMS development phase 2.

A large number of HF net participants during an emergency will tend to tie things up, slow things down. It is on the VHF/UHF frequencies utilized for tactical, shorter range communications that a larger number of volunteers are needed.

Practice nets on HF are good for training, but just as it is with the real thing, too many participants will only breed confusion and slow things down.

I live in a remote desert town, with the nearest neighboring towns 25 miles away, the nearest city 65 miles away, and the nearest large metro area 125 miles away. All of these are well within the range limitations of NVIS antennas, and the likelihood that emergency communications to any place located further away is going to be required are vanishingly small. (Nearest working internet, remember?)

Two, or at most three dedicated amateurs practicing from each town or city within this area should be more than sufficient. This is a feature of NBEMS, not a bug, when you consider

the typical difficulty in obtaining competent and dedicated volunteers.

Trying to establish state-wide or national practice nets would be particularly stupid, as they would serve no rational purpose. If and when an emergency or disaster strikes my town, we will need one (1) contact with one of the surrounding towns or cities within easy NVIS range to handle the HF end of our emergency communications. That is ALL that will be needed - and having to deal with anything more will slow down communications, not speed them up.

So, we may hold practice nets with each of the communities in range, but during a real event, all but one will be asked to listen in and stand by.

Of the two or three volunteers needed for HF communications in each town, one or two will be asked to listen in, stand by, or rest up so they will be ready to act as a relief operator after a while. Remember that the idea is to move data to the nearest functioning internet connection, not socialize.

I happen to know that you are a Winlink enthusiast, Matthew, so you might want to save your troll questions and disparaging remarks for some other egroup.

7266. Voice net and digital net

Yahoo group: paNBEMS (2012 — 2018)
Date: 2016-08-08 02:12:58 UTC
From: Steve Bellner
Topic: 7241 Message: 7266

Just wondering...

Are we reinventing the wheel?

NBEMS nets are very useful and NBEMS has reliable error free messaging. Operators of these groups know that nets can be long and take a large amount of time to just take check-ins.

It has been my experience that most of the ARES members involved with my local ARES group (and there are more than just a few.) do not know how to operate using NBEMS. This also goes for organized the other organized emcomm groups. There are very few who can pass a radiogram.

Rather than expand another group why not make a concentrated effort to bolster some of the already existing emcomm groups such as NTS, ARES, SATERN, MARS, RACES. Many states have a NTS group and some of them are digital. Granted, being limited to digital modes in the frequency range makes for long check-ins.

What if two nets where to operate in simulcast, i.e. voice net on one frequency and digital on another. CS on digital would stand by on freq and a station rep from voice net would gather all check-ins and relay to Digital NCS on the digital frequency. the speed would increase and it would give an opportunity to pass traffic error free. Basically voice NCS would send you off freq to pass traffic. You would be sent to the digital sound card frequency to pass traffic. If yo cannot hear Voice NCS you could check in with Digital NCS.

Perhaps by checking with ARRL and these groups a coordinated effort could produce a faster and coordinated net.

THE BOTTOM LINE... here's the question

We have voice emcomm nets in place. Can the voice nets expand to have a digital net on an appropriate frequency to coordinate with?

7267. Re: [paNBEMS] Time for NBEMS development phase 2.

Yahoo group: paNBEMS (2012 — 2018)
Date: 2016-08-08 02:13:15 UTC
From: Dave Frazier wb0kgn
Topic: 7241 Message: 7267

So use two frequencies....one for control and the other digi frequency to pass digi traffic. We can do that now. Dave wb0kgn ----- Original Message ----- From: "charles brabham n5pvl@... [paNBEMS]" To: paNBEMS@yahoogroups.com Sent: Sunday, August 7, 2016 8:02:48 PM Subject: Re: [paNBEMS] Time for NBEMS development phase 2. Mixed-mode operation on HF is not legal. It is however legal on VHF and above. Contact with a large number of stations, or with stations more than 100 miles or so away are unnecessary, and counterproductive on HF. For practice nets, the number of participants can be larger, but it should be understood that in a real emergency, a large number of participants will slow things down - to no purpose. Whether packet fails or not on VHF, then a VHF NBEMS net may operate as you suggest. On HF, the idea is to get data in and out to another station that is outside of the disaster area, and so has good internet access. Two stations working together, one in the disaster area and one just outside of it can do this best. Additional stations will just tend to slow things down, for the obvious reason. There is nothing "puzzling" about two stations passing data more efficiently if not having to waste time dealing with additional stations that serve no useful purpose. 73 DE Charles, N5PVL On 8/7/2016 7:23 PM, 'Tom Smith' tomqsmith@verizon.net [paNBEMS] wrote: I’m puzzled over what I’m reading about large numbers of stations on an HF net tying things up. 7268. Re: [paNBEMS] Voice net and digital net

Yahoo group: paNBEMS (2012 — 2018)
Date: 2016-08-08 03:19:36 UTC
From: Charles J. Hargrove
Topic: 7241 Message: 7268

That's the plan with NYC-ARECS, NY-NBEMS and USeast-NBEMS. We use a local VHF or UHF repeater within NYC for combined voice and digital use and the two NBEMS nets use 7.036 for digital traffic with 7.236 as voice back-up/ coordination if needed.

On Sun, August 7, 2016 10:12 pm, Steve Bellner w8ter@... [paNBEMS] wrote:

This is commonly done on VHF. On HF, there is no particular in it for NBEMS operation. - It is certainly not worth going to a lot of trouble to implement.

If the nets that you are participating in are crowded now, do you really imagine that bringing more people and groups in will reduce the boredom and confusion?

There's no need for mixed-mode operation on HF.

Topic: 7241 Message: 7271

Multiple frequencies....
An excellent idea IF the operators are experienced and disciplined enough to work in this manner.
The way it works in one environment I work in is that NCS runs a voice net on one frequency (let's call it the calling frequency.) They send stations with traffic to working frequencies to pass the traffic and then return. NCS can use a number of working frequencies if needed and conditions permit. Traffic can be data or voice and working frequencies are selected accordingly.
It works.

So use two frequencies....one for control and the other digi frequency to pass digi traffic. We can do that now.Davewb0kgn

Mixed-mode operation on HF is not legal. It is however legal on
VHF and above.
Contact with a large number of stations, or with stations more
than 100 miles or so away are unnecessary, and counterproductive
on HF.

For practice nets, the number of participants can be larger, but
it should be understood that in a real emergency, a large number
of participants will slow things down - to no purpose.
Whether packet fails or not on VHF, then a VHF NBEMS net may
operate as you suggest.

On HF, the idea is to get data in and out to another station that
is outside of the disaster area, and so has good internet access.
Two stations working together, one in the disaster area and one
just outside of it can do this best. Additional stations will just
tend to slow things down, for the obvious reason.
There is nothing "puzzling" about two stations passing data more
efficiently if not having to waste time dealing with additional
stations that serve no useful purpose.

I’m puzzled over what I’m reading about large numbers of stations on an HF net tying things up. Yes, I guess of you had poorly trained operators and a weak NCS that could happen. For short hop local work VHF/UHF repeaters and simplex work fine. Great resources. What about situations where they are down or non-existent? HF NVIS or long haul have and will work. I regularly work in HF nets with 15 – 20 or more stations passing digital traffic. Nobody told us that it would slow us down.

Consider mixed-mode nets. Some of us think that we shouldn’t use voice on a RTTY frequency, or RTTY/data on a phone frequency. Under normal circumstances that’s good band citizenship. In an emergency, consider running nets where traffic is controlled and coordinated with voice and passed it with digital. Non-amateur services do this all the time and it works quite well. It does require trained operators and a certain degree of discipline.

Subject: Re: [paNBEMS] Time for NBEMS development phase 2.

A large number of HF net participants during an emergency will tend to tie things up, slow things down. It is on the VHF/UHF frequencies utilized for tactical, shorter range communications that a larger number of volunteers are needed.
Practice nets on HF are good for training, but just as it is with the real thing, too many participants will only breed confusion and slow things down.
I live in a remote desert town, with the nearest neighboring towns 25 miles away, the nearest city 65 miles away, and the nearest large metro area 125 miles away. All of these are well within the range limitations of NVIS antennas, and the likelihood that emergency communications to any place located further away is going to be required are vanishingly small. (Nearest working internet, remember?)
Two, or at most three dedicated amateurs

practicing from each town or city within this area should be more than sufficient. This is a feature of NBEMS, not a bug, when you consider the typical difficulty in obtaining competent and dedicated volunteers.
Trying to establish state-wide or national practice nets would be particularly stupid, as they would serve no rational purpose. If and when an emergency or disaster strikes my town, we will need one (1) contact with one of the surrounding towns or cities within easy NVIS range to handle the HF end of our emergency communications. That is ALL that will be needed - and having to deal with anything more will slow down communications, not speed them up.
So, we may hold practice nets with each of the communities in range, but during a real event, all but one will be asked to listen in and stand by. Of the two or three volunteers needed for HF communications in each town, one or two will be asked to listen in, stand by, or rest up so they will be ready to act as a relief operator after a while. Remember that the idea is to move data to the nearest functioning internet connection, not socialize.
I happen to know that you are a Winlink enthusiast, Matthew, so you might want to save your troll questions and disparaging remarks for some other egroup.

On 8/6/2016 2:10 PM, Matthew Pitts daywalker_blade_2004@yahoo.com [paNBEMS] wrote:

And yet, NBEMS needs willing bodies to be listening when a disaster hits and ready to pass on any messages received, which is why practice nets exist, is it not? When the number of participants in a net is insufficient to provide coverage in a potential affected area, the system is flawed.

Tom, I would be interested in knowing which HF nets you are referring to, and what methods you use . My experiencing using the various NBEMS nets has been that they are notoriously SLOW. I agree SLOW and accurate is better than no traffic getting through, however I'm looking for more efficient methods.

Topic: 7241 Message: 7273

Charles, please do not brand anyone who has an opinion different than yours as a person out to "undercut' or undermine NBEMS. NBEMS started as a relatively enlightened concept that required operators to re-think some basic operating methods. NBEMS operators are thus likely to always be in interested in new ideas, or at least listening to them. NBEMS has no commitment to remaining static. If you consider FLARQ within the very first beta releases of Fldigi as NBEMS, then you will see FLARQ had a concept of "relay" in mind from the very beginning.

Again, I agree with all those comments about NBEMS methods being very effective at the local level. My interest in starting this thread was to add a national NBEMS structure. I respect the opinions of those that suggest it should not be needed because disasters tend to be local in nature. However, I keep in mind the request several hams received at the height of the Haiti earthquake disaster. They wanted to get a H&W inquiry to Haiti. Digital methods had no organized system for passing the traffic. My thoughts are that practicing a nationwide NBEMS system on a regular basis (e.g. traffic from Idaho to Rhode Island moved within a couple of hours) would be good preparedness.

From: Tom Smith
Topic: 7241 Message: 7275

Yes. You've got it.

If the destination station returns to the calling frequency before a new originating station catches him on the working frequency, NCS just sends them back, or to another working frequency.

If traffic is light of if there are broadcast messages, NCS can just direct stations to pass traffic on the calling frequency.

Works great.

Message traffic can be passed with a variety of modes, depending on the situation. NBEMS works well as do a number of military and other modes. Note that traffic is usually passed station to station with positive acknowledgement of receipt and accountability for messages maintained from originator to final addressee(s).

Andy:

Army MARS.

HF nets can be slow due to the limited speed at which we can reliably pass data (digital traffic). Conditions vary hour by hour and day by day. But, slow traffic is better than no traffic.

Good training and circuit discipline lets us get the most out of what we have to work with.

Tom, I would be interested in knowing which HF nets you are referring to, and what methods you use . My experiencing using the various NBEMS nets has been that they are notoriously SLOW. I agree SLOW and accurate is better than no traffic getting through, however I'm looking for more efficient methods.

I’m puzzled over what I’m reading about large numbers of stations on an HF net tying things up. Yes, I guess of you had poorly trained operators and a weak NCS that could happen. For short hop local work VHF/UHF repeaters and simplex work fine. Great resources. What about situations where they are down or non-existent? HF NVIS or long haul have and will work. I regularly work in HF nets with 15 – 20 or more stations passing digital traffic. Nobody told us that it would slow us down.

Consider mixed-mode nets. Some of us think that we shouldn’t use voice on a RTTY frequency, or RTTY/data on a phone frequency. Under normal circumstances that’s good band citizenship. In an emergency, consider running nets where traffic is controlled and coordinated with voice and passed it with digital. Non-amateur services do this all the time and it works quite well. It does require trained operators and a certain degree of discipline.

Subject: Re: [paNBEMS] Time for NBEMS development phase 2.

A large number of HF net participants during an emergency will tend to tie things up, slow things down. It is on the VHF/UHF frequencies utilized for tactical, shorter range communications that a larger number of volunteers are needed.

Practice nets on HF are good for training, but just as it is with the real thing, too many participants will only breed confusion and slow things down.

I live in a remote desert town, with the nearest neighboring towns 25 miles away, the nearest city 65 miles away, and the nearest large metro area 125 miles away. All of these are well within the range limitations of NVIS antennas, and the likelihood that emergency communications to any place located further away is going to be required are vanishingly small. (Nearest working internet, remember?)

Two, or at most three dedicated amateurs practicing from each town or city within this area should be more than sufficient. This is a feature of NBEMS, not a bug, when you consider the typical difficulty in obtaining competent and dedicated volunteers.

Trying to establish state-wide or national practice nets would be particularly stupid, as they would serve no rational purpose. If and when an emergency or disaster strikes my town, we will need one (1) contact with one of the surrounding towns or cities within easy NVIS range to handle the HF end of our emergency communications. That is ALL that will be needed - and having to deal with anything more will slow down communications, not speed them up.

So, we may hold practice nets with each of the communities in range, but during a real event, all but one will be asked to listen in and stand by.

Of the two or three volunteers needed for HF communications in each town, one or two will be asked to listen in, stand by, or rest up so they will be ready to act as a relief operator after a while. Remember that the idea is to move data to the nearest functioning internet connection, not socialize.

I happen to know that you are a Winlink enthusiast, Matthew, so you might want to save your troll questions and disparaging remarks for some other egroup.

How about learning to deal with local VHF/UHF nets and then relay the checkin's up to the 40 meter net ?

Start local nets on VHF/UHF, training resending FLAMP, and FLmsg relay the local net folks who can not hear the 40 meter net....
Run more then 1 net but on separate bands as you would in the state of emergency !!!

We do not do this just for fun...We are supposed to be trained and ready for any disaster or emergency....

When the shit hits the fan you can't think....it must be an auto response....You do not learn HOw TO during any disaster or emergency

I have spent many hour during the winter months requesting snow fall amounts on road surfaces from local VHF/UHF folks....Any roof cave ins came from local folks on VHF then we sent response to PEMA and then to FEMA from the PA headquarters as in Lancaster/York area a few years ago.....

During the winter time if we are activated we support PEMA with realtime data which they can not get from WX NOAA...We confirm or change the data from NoAA by adding realtime events.... The state monitors snow fall on roads and from our nets.....

Learn to deal with the prop....Work local VHF/UHF nets and check that into the HF net with relays if needed.... But LEARN how to deal with conditions as they are..... When we are needed we do not pick the time......I covered 14 hours straight during the winter at midnight then relieved in the afternoon.... These are TRAINING NETS not hello, good bye ! In Potter County we loose electric and telephone during storms, I need back electric
I deal with it....Get more folks involved including the techs on the repeaters.....Teach them how to use FLdigi or even voice....Create FLAMP and FLmsg that can be sent via digital messaging.....If necessary, draw a diagram of local repeater coverage and train have you EC or ACS work with you ..... Find a HF station that has coverage and can handle message via FLDIGI on 40 or 80 meters....

I guess the operative WORDING is TEAM WORK !!!

Good Luck de Skip

It is however legal on VHF and above. Contact with a large number of stations, or with stations more than 100 miles or so away are unnecessary, and counterproductive on HF. For practice nets, the number of participants can be larger, but it should be understood that in a real emergency, a large number of participants will slow things down - to no purpose. Whether packet fails or not on VHF, then a VHF NBEMS net may operate as you suggest. On HF, the idea is to get data in and out to another station that is outside of the disaster area, and so has good internet access. Two stations working together, one in the disaster area and one just outside of it can do this best. Additional stations will just tend to slow things down, for the obvious reason. There is nothing "puzzling" about two stations passing data more efficiently if not having to waste time dealing with additional stations that serve no useful purpose. 73 DE Charles, N5PVL On 8/7/2016 7:23 PM, 'Tom Smith' tomqsmith@verizon.net [paNBEMS] wrote:

From: charles brabham
Topic: 7241 Message: 7280

My understanding of NTS is that during the course of an emergency, the NTS system handles health and welfare traffic, thus easing the burden on all other communications assets and services.

In the aftermath of an emergency or disaster, people who might normally only want to communicate with Aunt Flo in Hoboken once a month all want to reach their family members outside of the affected area at the same time, wanting to let them know how they are doing. This sudden peak in demand places an enormous burden upon all communications services, which will already be damaged or set back by the disaster itself.

The NTS provides an important and valuable service by diverting some of this traffic away from the damaged infrastructure.

This is a separate job from NBEMS, which provides alternate emergency communications for various government agencies and emergency responders.

Both jobs are important - but separate. They both occur at the same time, but this does not mean that it is a good idea to combine them.

NTS, by the nature of its task, will be addressing an overload and delays throughout its mission. NBEMS on the other hand needs to provide an open, clear communications channel that can provide communications right now... These two tasks are like oil and water, they will not combine well. Each though, serves to ease the work of the other.

Good advice, Skip. All communication methods have a place somewhere in the mix.

Tom KB3TQS

Subject: [paNBEMS] re: Net proceedure and operation

How about learning to deal with local VHF/UHF nets and then relay the checkin's up to the 40 meter net ?

Start local nets on VHF/UHF, training resending FLAMP, and FLmsg relay the local net folks who can not hear the 40 meter net....
Run more then 1 net but on separate bands as you would in the state of emergency !!!

We do not do this just for fun...We are supposed to be trained and ready for

any disaster or emergency....

When the shit hits the fan you can't think....it must be an auto response....You do not learn HOw TO during any disaster or emergency

I have spent many hour during the winter months requesting snow fall amounts

on road surfaces from local VHF/UHF folks....Any roof cave ins came from local folks on VHF then we sent response to PEMA and then to FEMA from the PA headquarters as in Lancaster/York area a few years ago.....

During the winter time if we are activated we support PEMA with realtime data which they can not get from WX NOAA...We confirm or change the data from NoAA by adding realtime events.... The state monitors snow fall on roads and from our nets.....

Learn to deal with the prop....Work local VHF/UHF nets and check that into the HF net with relays if needed.... But LEARN how to deal with conditions as they are..... When we are needed we do not pick the time......I covered 14 hours straight during the winter at midnight then relieved
in the afternoon.... These are TRAINING NETS not hello, good bye ! In Potter County we loose electric and telephone during storms, I need back electric
I deal with it....Get more folks involved including the techs on the repeaters.....Teach them how to use FLdigi or even voice....Create FLAMP and

FLmsg that can
be sent via digital messaging.....If necessary, draw a diagram of local
repeater coverage and train have you EC or ACS work with you ..... Find a HF

station
that has coverage and can handle message via FLDIGI on 40 or 80 meters....

I guess the operative WORDING is TEAM WORK !!!

Good Luck de Skip

Andy, I "brand" opinions here that serve to undercut or undermine the work of NBEMS volunteers through mission drift and misdirection. - Your suggestions are almost exclusively of this nature.

Again and again, you demonstrate that you either do not understand - or do not care about the way NBEMS operates.

Sorry OM, but that is how it is. If you look at all of the various "helpful suggestions" that you have made over the years, I cannot think of a single one that has been adopted and utilized by the NBEMS group.

There is a very good reason for that, as outlined above.

Excellent question. My thoughts …

Understand that NTS is NOT the sort of emergency communications means that local and regional governments will use to manage an incident. If is a means of passing health and welfare messages. It is NOT for passing operational traffic. It is the “Hi, wish you were here” postcard type of system, not the “SEND HELP NOW!” 911 kind.

After understanding what NTS is and isn’t, we need to decide if NTS is a solution to a problem that no longer exists, or if it has a place in today’s environment.

If we decide it’s a keeper we need to get operators that understand circuit discipline and know how to work in a net to handle message traffic. The NTS nets I’ve monitored were more of an excuse to chit-chat than learn message handling. I found it nearly impossible to copy voice messages because of the sloppy way that the operators sent them. Too fast and not clearly articulated.

Adopt and train on a digital standard. NBEMS will work well but it isn’t the only tool on the bag.

There's no need for mixed-mode operation on HF.

Mixed-mode operation on HF is not legal. It is however legal on VHF and above.

Contact with a large number of stations, or with stations more than 100 miles or so away are unnecessary, and counterproductive on HF.

For practice nets, the number of participants can be larger, but it should be understood that in a real emergency, a large number of participants will slow things down - to no purpose.

Whether packet fails or not on VHF, then a VHF NBEMS net may operate as you suggest.

On HF, the idea is to get data in and out to another station that is outside of the disaster area, and so has good internet access. Two stations working together, one in the disaster area and one just outside of it can do this best. Additional stations will just tend to slow things down, for the obvious reason.

There is nothing "puzzling" about two stations passing data more efficiently if not having to waste time dealing with additional stations that serve no useful purpose.

On 8/7/2016 7:23 PM, 'Tom Smith' tomqsmith@... <mailto:tomqsmith@...> [paNBEMS] wrote:

I’m puzzled over what I’m reading about large numbers of stations on an HF net tying things up. Yes, I guess of you had poorly trained operators and a weak NCS that could happen. For short hop local work VHF/UHF repeaters and simplex work fine. Great resources. What about situations where they are down or non-existent? HF NVIS or long haul have and will work. I regularly work in HF nets with 15 – 20 or more stations passing digital traffic. Nobody told us that it would slow us down.

Consider mixed-mode nets. Some of us think that we shouldn’t use voice on a RTTY frequency, or RTTY/data on a phone frequency. Under normal circumstances that’s good band citizenship. In an emergency, consider running nets where traffic is controlled and coordinated with voice and passed it with digital. Non-amateur services do this all the time and it works quite well. It does require trained operators and a certain degree of discipline.

Subject: Re: [paNBEMS] Time for NBEMS development phase 2.

A large number of HF net participants during an emergency will tend to tie things up, slow things down. It is on the VHF/UHF frequencies utilized for tactical, shorter range communications that a larger number of volunteers are needed.

Practice nets on HF are good for training, but just as it is with the real thing, too many participants will only breed confusion and slow things down.

I live in a remote desert town, with the nearest neighboring towns 25 miles away, the nearest city 65 miles away, and the nearest large metro area 125 miles away. All of these are well within the range limitations of NVIS antennas, and the likelihood that emergency communications to any place located further away is going to be required are vanishingly small. (Nearest working internet, remember?)

Two, or at most three dedicated amateurs practicing from each town or city within this area should be more than sufficient. This is a feature of NBEMS, not a bug, when you consider the typical difficulty in obtaining competent and dedicated volunteers.

Trying to establish state-wide or national practice nets would be particularly stupid, as they would serve no rational purpose. If and when an emergency or disaster strikes my town, we will need one (1) contact with one of the surrounding towns or cities within easy NVIS range to handle the HF end of our emergency communications. That is ALL that will be needed - and having to deal with anything more will slow down communications, not speed them up.

So, we may hold practice nets with each of the communities in range, but during a real event, all but one will be asked to listen in and stand by.

Of the two or three volunteers needed for HF communications in each town, one or two will be asked to listen in, stand by, or rest up so they will be ready to act as a relief operator after a while. Remember that the idea is to move data to the nearest functioning internet connection, not socialize.

I happen to know that you are a Winlink enthusiast, Matthew, so you might want to save your troll questions and disparaging remarks for some other egroup.

From: charles brabham
Topic: 7241 Message: 7284

I believe that the NTS mission is as important today as it was in the pre-internet era. What the NTS folks do is a credit to the hobby.

From: Matthew Pitts
Topic: 7241 Message: 7285

True, but we have to understand and follow our state standards with regards to health and welfare messages and when we should start handling them. At least in Ohio, they are not top priority during the earliest days of any disaster situation. Other states may be different.

7286. Re: [paNBEMS] Time for NBEMS development phase 2.

Yahoo group: paNBEMS (2012 — 2018)
Date: 2016-08-09 13:22:45 UTC
From: Dave Frazier wb0kgn
Topic: 7241 Message: 7286

Thanks Charles. I had not thought of the NTS in such narrowly defined terms. It might take me a while to digest. Sharply defined roles makes planning easier. Dave ----- Original Message ----- From: "charles brabham n5pvl@uspacket.org [paNBEMS]" To: paNBEMS@yahoogroups.com Sent: Tuesday, August 9, 2016 4:45:45 AM Subject: Re: [paNBEMS] Time for NBEMS development phase 2. My understanding of NTS is that during the course of an emergency, the NTS system handles health and welfare traffic, thus easing the burden on all other communications assets and services. In the aftermath of an emergency or disaster, people who might normally only want to communicate with Aunt Flo in Hoboken once a month all want to reach their family members outside of the affected area at the same time, wanting to let them know how they are doing. This sudden peak in demand places an enormous burden upon all communications services, which will already be damaged or set back by the disaster itself. The NTS provides an important and valuable service by diverting some of this traffic away from the damaged infrastructure. This is a separate job from NBEMS, which provides alternate emergency communications for various government agencies and emergency responders. Both jobs are important - but separate. They both occur at the same time, but this does not mean that it is a good idea to combine them. NTS, by the nature of its task, will be addressing an overload and delays throughout its mission. NBEMS on the other hand needs to provide an open, clear communications channel that can provide communications right now... These two tasks are like oil and water, they will not combine well. Each though, serves to ease the work of the other. 73 DE Charles, N5PVL On 8/8/2016 8:45 AM, Dave Frazier wb0kgn wb0kgn@... [paNBEMS] wrote: Transitioning ...how do we get from where we are at to more digital operation, and how do we make best use of the NTS? ----- Original Message ----- From: "charles brabham n5pvl@... [paNBEMS]" To: paNBEMS@yahoogroups.com Sent: Monday, August 8 , 2016 4:22:29 AM Subject: Re: [paNBEMS] Time for NBEMS development phase 2. There's no need for mixed-mode operation on HF. 73 DE Charles, N5PVL On 8/7/2016 9:13 PM, Dave Frazier wb0kgn wb0kgn@... [paNBEMS] wrote:
So use two frequencies....one for control and the other digi frequency to pass digi traffic. We can do that now. Dave wb0kgn ----- Original Message ----- From: "charles brabham n5pvl@... [paNBEMS]" To: paNBEMS@yahoogroups.com Sent: Sunday, August 7 , 2016 8:02:48 PM Subject: Re: [paNBEMS] Time for NBEMS development phase 2. Mixed-mode operation on HF is not legal. It is however legal on VHF and above. Contact with a large number of stations, or with stations more than 100 miles or so away are unnecessary, and counterproductive on HF. For practice nets, the number of participants can be larger, but it should be understood that in a real emergency, a large number of participants will slow things down - to no purpose. Whether packet fails or not on VHF, then a VHF NBEMS net may operate as you suggest. On HF, the idea is to get data in and out to another station that is outside of the disaster area, and so has good internet access. Two stations working together, one in the disaster area and one just outside of it can do this best. Additional stations will just tend to slow things down, for the obvious reason. There is nothing "puzzling" about two stations passing data more efficiently if not having to waste time dealing with additional stations that serve no useful purpose. 73 DE Charles, N5PVL On 8/7/2016 7:23 PM, 'Tom Smith' tomqsmith@... [paNBEMS] wrote:
I’m puzzled over what I’m reading about large numbers of stations on an HF net tying things up. Yes, I guess of you had poorly trained operators and a weak NCS that could happen. For short hop local work VHF/UHF repeaters and simplex work fine. Great resources. What about

situations where they are down or non-existent? HF NVIS or long haul have and will work. I regularly work in HF nets with 15 – 20 or more stations passing digital traffic. Nobody told us that it would slow us down. Consider mixed-mode nets. Some of us think that we shouldn’t use voice on a RTTY frequency, or RTTY/data on a phone frequency. Under normal circumstances that’s good band citizenship. In an emergency, consider running nets where traffic is controlled and coordinated with voice and passed it with digital. Non-amateur services do this all the time and it works quite well. It does require trained operators and a certain degree of discipline. Tom KB3TQS From: paNBEMS@yahoogroups.com [mailto:paNBEMS@yahoogroups.com] Sent: Saturday, August 06 , 2016 17:36 To: paNBEMS@yahoogroups.com Subject: Re: [paNBEMS] Time for NBEMS development phase 2. A large number of HF net participants during an emergency will tend to tie things up, slow things down. It is on the VHF/UHF frequencies utilized for tactical, shorter range communications that a larger number of volunteers are needed. Practice nets on HF are good for training, but just as it is with the real thing, too many participants will only breed confusion and slow things down. I live in a remote desert town, with the nearest neighboring towns 25 miles away, the nearest city 65 miles away, and the nearest large metro area 125 miles away. All of these are well within the range limitations of NVIS antennas, and the likelihood that emergency communications to any place located further away is going to be required are vanishingly small. (Nearest working internet, remember?) Two, or at most three dedicated amateurs practicing from each town or city within this area should be more than sufficient. This is a feature of NBEMS, not a bug, when you consider the typical difficulty in obtaining competent and dedicated volunteers. Trying to establish state-wide or national practice nets would be particularly stupid, as they would serve no rational purpose. If and when an emergency or disaster strikes my town, we will need one (1) contact with one of the surrounding towns or cities within easy NVIS range to handle the HF end of our emergency communications. That is ALL that will be needed - and having to deal with anything more will slow down communications, not speed them up. So, we may hold practice nets with each of the communities in range, but during a real event, all but one will be asked to listen in and stand by. Of the two or three volunteers needed for HF communications in each town, one or two will be asked to listen in, stand by, or rest up so they will be ready to act as a relief operator after a while. Remember that the idea is to move data to the nearest functioning internet connection, not socialize. I happen to know that you are a Winlink enthusiast, Matthew, so you might want to save your troll questions and disparaging remarks for some other egroup. 73 DE Charles, N5PVL On 8/6/2016 2:10 PM, Matthew Pitts daywalker_blade_2004@... I don't think other states differ from placing health and welfare traffic low on the list.
 This traffic has no place on operational nets.
Interesting question... doesn't the Red Cross now well perform this mission?

True, but we have to understand and follow our state standards with regards to health and welfare messages and when we should start handling them. At least in Ohio, they are not top priority during the earliest days of any disaster situation. Other states may be different.

The paNBEMS Net was formed to introduce FLdigi as a form of digital communication....The net was a training ground for folks who wanted to learn how to send and rcve traffic....
At this point it is nothing more then a hi hello good bye net just as most other useless ARES or ACS/RACES Net
There are no messages resend or training.....At this point I do not have the time to waste....l am on 7.0725 Mhz most days for training..... Sunday I will not be available as NCS

From: Steve
Topic: 7241 Message: 7290

In browsing through the posts on this thread where NTS is mentioned, it seems that what is being suggested is an NBEMS net structure that emulates the structure of NTS above the section level, i.e. the NTS area nets and the TCC (Transcontinental Corps).

At the section level and below, the modes used are flexible and can include cw, voice, NBEMS, packet, etc. They can be on any band including VHF/UHF and above. The higher level structure is more constrained. The TCC, whose function is to move traffic from area to area, is strictly cw and consists of a selected cadre of skilled and dedicated operators.

With regard to H&W traffic versus emcomm, the traffic system can accommodate both. As an example, NTS played a special role in the recent Cascadia Rising exercise where messages (in radiogram format as specified by FEMA) were relayed from the Northwest (including Alaska) to FEMA's National Response Coordinating Center (NRCC) in Washington, D.C.. A brief press release was issued by NTS and I have included the text below this message. The stats that are very briefly summarized in the release provide a good benchmark for any RF only transcontinental relay system. There is a full After Action Review that has been drafted. This will be released in some form after the agency partners have reviewed the document.

The key need in the system is not for transport at the level above the states but rather for local support - outlets for traffic and cooperation with ARES. That's where the bottlenecks and delays occur.

There's a neat little newsletter called "QNI" that has a lot of information on the inside workings of the traffic network. In the May issue is an article on how we are using NBEMS for formal traffic and ARES training within Maine. This is available at http://dl.dropboxusercontent.com/u/73013707/QNI%202016-5.pdf An index of all issues is at https://qni-newsletter.net/

As has been noted on this thread, due to various issues concerning the relationship of NTS with ARRL, an independent organization has recently been formed. The name is Radio Relay International (RRI). This group is active above the section level and follows the same procedures as NTS. The two groups are fully interoperable and the section level nets are free to affiliate with either or both. NTS-Digital followed suit and the corresponding independent group is the Digital Traffic Net.

*
**PRESS RELEASE - NTS SUPPORTS FEMA'S "CASCADIA RISING" EXERCISE*
Submitted by kw1u on Sat, 06/11/2016 - 20:26

National Traffic System Supports FEMA’s Cascadia Rising

The ARRL’s National Traffic System debuted its new National Response Plan this past week during FEMA’s Cascadia Rising exercise. At the invitation of FEMA’s Disaster Emergency Communications Directorate, more than forty NTS members in the U.S. and Canada demonstrated the ability to relay situational awareness from a simulated disaster area covering the States of Alaska, Idaho, Northern California, Oregon and Washington to their National Response Coordinating Center at Washington, D.C.

Methods used during this proof-of-concept demonstration project included the NTSD digital network as well as traditional radiotelephone and radiotelegraph networks. All message traffic was transmitted and delivered over RF-only circuits using the universal radiogram format, selected for its proven network management tools and enhanced accountability standards.

The exercise proved the value of consistent, internationally adopted, standard procedures, practiced through regular traffic handling assignments. Some observers compared NTS radiotelegraph nets to the best of military and commercial operations. Transcontinental Corps ops displayed professionalism and skill operating CW under poor propagation conditions. An initial review of TCC traffic shows near perfect accuracy (>99%) with the random, five character groups used for message texts. Coast-to-coast traverse time averaged less than fifteen minutes. One message was relayed in less than one minute.

Cascadia Rising will be the first of many exercises with FEMA designed to enhance the ability of NTS to provide efficient and reliable disaster communications services, especially vital situational awareness in the early moments of a communications failure. NTS enjoys a culture of continual improvement and lessons learned from Cascadia Rising will be used to improve the National Response Plan and provide a basis of comparison for system performance.

Radio Amateurs interested in participating in NTS should check-in to a Section or local NTS net or contact their ARRL Section Traffic Manager. http://www.arrl.org/sections.

Skip, it does not help when the net control and maybe one or two others are the only ones to bring messages to the net. We see this in voice nets as well where the lack of overall contribution by more than a few devolve into a check-in only net. People need to stop taking the position as a spectator to be entertained and become more of a participant in all aspects of the net and what the purpose is of the net.

Packet can be good for local data communications on VHF. A good alternative would be to use NBEMS software on VHF, with the appropriate digital mode.

Either one can be done with soundcard software and a VHF transceiver... I prefer the NBEMS route, as packet is subject to being misused by Winlinkers.

There are a number of modems designed for VHF and up within FLDIGI. Specifically the 8PSK modem which are much faster then using the same bandwidth requirements as AFSK packet modems have. If you need to transfer files though a repeater FLAMP has features built-in to handle the repeater timeouts. The process of transmitting over VHF/UHF interface wise is the same as using with HF.

There are a few programs available to MacOSX. If your bent on using AFSK packet modems, Direwolf works pretty well and in most cases will handle packet frames better then TNC's do. BQP32 is a BBS/AX25/MAIL service software that can interface to DireWolf or FLDIGI. If your into APRS using Java to execute YAAC is a good option. YAAC will interface between either DireWolf or FLDIGI. The only restriction in using FLDIGI and YAAC is FLDGI does currently have a ASFK packet modem. However, using BPSK on the HF bands is far better then 300 baud AFSK modems.
If you plan on using FLMSG/FLAMP and the other FL_TOOLS you will need to use FLDIGI as the other stated above programs do not have the ARQ IO port for program to program communications.
BPQ32 uses a web browser as a terminal interface and you can configure BPQ32 using the same browser.
Hope this helps,
Robert, KK5VD

Subject: Re: [paNBEMS] Fw: Net proceedure and operation

  So I'm going to put on my "stupid" hat and ask a question regarding NBEMS and VHF.
My experience with VHF Packet goes back to the TNC-2 days where the only option was a hardware TNC into either a 286 computer or VT-100 Terminal. What I would like to know is what are the current recommendations and configurations for using NBEMS on the VHF band? Can we still use our hardware TNCs or do we have to build a sound card interface?
My current VHF "setup" consists of a Kenwood TM-V71A connected to a KPC-3 which in turn is connected to a iMac through an FTDI serial to USB adaptor. I haven't seen any configuration documentation regarding NBEMS on VHF. I know I can boot into WinDoze and run RMS Express and still use my hardware TNC to communicate.
I'm just trying to educate myself on what the current thoughts regarding VHF communications are. I'm not looking for a flame war, just some thoughts on what is currently being used out there and what flavor is the easiest to sell to the masses.

Before I moved to West Texas, the emcom group that I worked with used
MT63-2k over a linked repeater system. - That was early days, though.
The newer modes are much better, I believe.

Eric. I often do listen to Utwente SDR receiver in Holland, via the MACBookPros loudspeaker, and doing live Fldigi decode using the inbuilt MIC in the MAC.

Usually I do this in parallell with real antennna and IC 706 and SignaLink decode using a WIN 10 Pc for comparison. Working very well.

Interesting hearing the signal difference between Holland and Norway (Oslo area) coming from North Carolina, or from WRMI Florida for DigiDX.uk.

Hi, We have been using NBEMS for RACES for 3 years. No big deal.
It is easy to teach, learn and train on. It works audio coupling but better with a Signaling. Start with a training net for your RACES but welcome others. Especially those with experience in digital they will be big help. Works on MAC and PC. We have a designated repeater but also simplex. Start it after your roll call net. Remember some will and some won't. It takes time to build. Keep messages short. You can start in blue screen or Flmsg. Show how to save and open files. Then go onto Flamp. Biggest problems are in configuration and finding fldigi components.

I think the intent of the developers of NBEMS is to place tools in the hands of radio operators to make it possible to transfer messages effectively under varying conditions using equipment at hand, and/or willing and capable stations.

The intent as I see it was to make message handling quick, effective, and fun instead of a job. If you want to invite participation and practice in your networks then encourage less formal nets where people can pass a message by ham radio to uncle Ike just for the fun of it, or make up a contest that gives points for passing messages to other towns or states and extra points for a spreadsheet or a picture.

Somehow NBEMS has become just another bureaucracy? The formal nets/operations have their place, true, but that should be one aspect of NBEMS, if it is only used in a formal agency auxiliary setting there are a lot of hams not going to participate.

Hams that operate VHF-FM need to be drawn in to operating with Fldigi and SSTV...so there you have a big network of local operators that can relay and if needed forward traffic to HF stations that can handle longer distance links. There is very limited bandwidth on HF so it should be conserved. VHF FM digital nets on simplex frequencies would encourage people to improve their base stations and antennas, as well as get in lots of practice on the air without waiting for a lengthy check-in on HF. More stations NBEMS capable equals a better network.

7299. a few observations from a net control op k3eui

Yahoo group: paNBEMS (2012 — 2018)
Date: 2016-08-12 14:20:18 UTC
From: barryfeierman at yahoo
Topic: 7299 Message: 7299

Dear Pa NBEMS folks

Let me first introduce myself: Barry, K3EUI, from West Chester, PA
about 20 miles west of Philadelphia. I've been an amateur radio op since 1958 but just joined the PA NBEMS group and became a net control op in the last year. My two favorite topics are sound card digi modes and antennas and propagation of HF waves (skip). I'm a retired Physics teacher/professor.

The purpose of the PaNBEMS net is to be able to send and receive emergency messages across the state. Hence we need training on how to do that ... and practice, practice, practice. The net currently operates on a frequency of 7072.5 kHz (usb dial frequency) using either Olivia 8/500 or CONT 8/500 for check in and usually MFSK32 op mode to send traffic.

When I began as one of the net control ops (last winter) propagation of 40 meters was pretty good, with no sign of a "skip zone" (a region where you cannot hear net control) at 11 am. On some Sunday's we were seeing over 30 checkins and a few pieces of traffic (usually ICS 213 FLMSG) or FLAMP.
All was well.

Since the summer began, "fickle forty" has not been so kind to use. As a PaNBEMS net, we rely on all stations being able to hear the net control station. With current propagation conditions (view an Ionosonde from Wallops Island or from Boston) the "critical frequency" (radiation straight up comes straight down) has been well below 7 MHz. That translates to this condition: if you are within 100 miles of the net control you are unlikely to hear the net control start the net. Well, it is obvious that if you can't hear net control, the net control won't be able to hear you. That has been the situation for a few months now.

Fickle Forty meters has a definite "skip zone" now and will likely have a sizable skip zone until next winter. That creates considerable difficulty for us, as a state-wide net. We need to be able to hear each other and PA is about 300 miles wide. What are our choices?

We can continue to operate on Sunday late mornings, 11 am, on 7072.5 and just do the best we can. We make more use of "relay stations" which are often 100-300 miles from the net control op. Last week I was the net control, and received quite a few checkins as a relay from Duane N6RVA in NNY.
That creates some frustration ..... if a station can't hear net control, then that station has no idea if the net has actually started. So does that person transmit at all, or worse yet ask "where is the ncs?" That just begs other stations to respond and the frequency becomes one giant QRM mess. I see that as not a very good situation for a state-wide NBEMS net.

So here are some options for us.
It seems to me that we have two distinct issues to overcome.
1) How do deal with the prevalent "skip zone" on 40m?
2) How to speed up the checkin in process and practice sending traffic?

So I'd like to speak to each of these.
First .... skip zone.
There is nothing we can do to change the ionosphere's behavior.
Our RF waves have to do two things: get thru the absorbing D layer, and then get refracted by the F layer, and come back through the D layer again and finally reach our antenna and be heard in our receivers. Remember, that's through the D layer twice. The D layer is our enemy.

Getting through the D layer means we cannot go too low in frequency.
Lower frequencies (160 and 80 meters) get almost completely absorbed by the D layer once the Sun has been up for a few hours. So by 11 am, the D layer pretty much wipes out 160m and 80/75m as operating bands, and makes 40 meters a bit iffy.

Even if our RF gets through the D layer, it must then be refracted by the F layer and come (almost straight) back down to avoid a "skip zone". The problem is that the higher in frequency we go .... 20m, 15, 10m ..... the less refraction occurs, so the angle of the refracted RF gets more oblique (shallow) .... good for DX but lousy for a state-wide net. So we all know that we would not dream of starting a HF PA NBEMS net on 10 meters or 20 meters. All of our RF would end up in Florida or Europe or S.America.

So what we want (and need) is a band where our RF can come back within a zone of 10-300 miles from the net control station .... someone in PA somewhere. Presently three of our net control ops are in the Philadelphia region (NY3J, N3FLL, K3EUI) all within 30 miles of center city Phila. So stations in EPA right now are having a hard time hearing a net control op near Phila. In fact, the present skip zone (about 100 miles) precludes many stations in EPa (and NJ) from hearing any one of the three control operators in the Phila region.

So here is my idea .... something the net control ops have been discussing now for about a month.

What if we (the PA NBEMS net) were to move the net to a lower frequency and operate earlier in the daytime? Experienced ops on 75/80 meters tell us that the best time for a regional or state-wide net might be from 8 am to 10 am. Operate a 75 meter net at 6 am and you hear stations from hundreds or thousands of miles.... better for DX. Operate a 75 meter net at noon, and you hear almost no one (D layer absorption).

So here is my proposal: we move the PANBEMS net to 3583 kHz (usb dial frequency) and move the net to 8:00 am Sunday morning. We can mess with the frequency a bit. We stick with checkin modes of Olivia 8/500 or CONT 8/500 since CONT works a bit faster. Both are pretty good, but a bit slow.
At 8am the MUF (d=100km) is often around 5-6 MHz, so 3.5 MHz is an almost ideal frequency for a NBEMS net.

Operations:
To speed things up: the net control op first asks stations to check in ONLY if that station has traffic to pass to the net. Stations (with traffic) from anywhere check in, get acknowledged by NC, and then stations send their traffic with MFSK 32 (or any mode we might find works well at 8 am on 80m).
Assuming the net control copies the traffic, we do not do RESENDS until the very end of the net. After traffic has been sent, the net control operator then asks for general checkins, moving through the PEMA regions of WPA, CPA, EPA and then by FCC call areas: 1, 2, 3, 4/8/9 and anywhere in US and then outside of US. After all checkins have been acknowledged, then

the NCS asks if anyone needs any resends of any of the traffic. Stations who have copied all of the traffic can leave the net (they do not need permission to leave the net) and the net continues until all stations have received all of the traffic.

This took longer to type than the net would normally run!

A few of us have been checking on propagation on 3583 kHz at 8 am, 9 am, 10 am, and 11 am, and noon. Basically we find propagation is pretty good from 30-300 miles anytime after the Sun has been up for a few hours. But by 11 am there is just too much D layer absorption to make 80m work. So moving the net to 80m but keeping it at 11 am, just solves one problem and creates a new problem.

Moving a net to 8am will be a difficulty for some (personal issues).
So maybe we keep the 40m 7072.5 net going at 11 am until next winter, when maybe it will return with a smaller skip zone.

Operation of checkins:
Here is one more (wild) idea to consider.
DX stations (like net controls) need a CLEAR frequency to be heard.
What if ..... we were to try having the net control op on one frequency, and the rest of the net up or down 500 Hz? That way, everyone could copy the net control without the QRM we sometimes get when two or more often many ops transmit on the same frequency.

Operating "split" might work even better if we were to try a narrower bandwidth mode, like Olivia 8/250 or 4/250. Net control transmits on 3583.0 kHz using Olivia 8/250 or Olivia 4/250 and everyone else transmits on 3583.5 kHz using the same mode. All ops could "lock" their transmit frequency on the waterfall at 2000 Hz using the FLDIGI "LK" button and listen for NCS at 1500 Hz on the waterfall .... (or use the XIT feature or RIT feature on their radio and keep 1500 Hz on the waterfall). Just a thought .... ncs always has a clear frequency (it works for DXpeditions).

Even wilder yet, if we were to use a mode like PSK31 or PSK63F the stations checking in could use ANY frequency within 1 kHz of the net control, and with the FLDIGI Signal Browser turned on, the net control could copy more than one station at the same time (but on different frequencies). Wow ... interesting idea! Might drive the NCS crazy, but it would get faster checkins!

TRIAL
So this Sunday, I will be listening on 3583.0 kHz (upper sideband, dial freq) with Olivia 8/500 and see how many stations can copy me. If we try this for a few weeks, and IF it works better (with no skip zone) than 40 meters at 11 am, then we have some evidence to at least consider moving the PA NBEMS net to a new (earlier) time and to a lower frequency, something BELOW the MUF for d=100 km

60 meters?
Personally, I like 60 meters even better than 80 meters for a NBEMS net.
60 meters (5 MHz) offers us a wider bandwidth (2.8 kHz) and we can use voice for checkins and pass traffic with a faster mode like MFSK 128.
But that's another story.... some older rigs will not TX on 5 MHz.
But 60m was acquired with EMCOM in mind.

Comments? Please share.... I know change is a challenge but maybe we have to also adapt our net to the band conditions.

I do not recall any mention of the antennas being utilized.

Is the group utilizing NVIS antennas?

Topic: 7299 Message: 7301

From Barry k3eui

As a ncs I have four 40m antennas I have experimented with

1) a 40m dipole 20 ft above gnd cut to 7100 kHz with close to
1.2:1 SWR fed with 50 ft of RG213
2) an 80/40 meter dipole with 40 m traps, also 25 ft above gnd,
cut for 7100 and 3600 kHz fed with 100 ft of RG213
3) a 1/4 wave vertical (34 ft high) with two above gnd radials 34 ft
long, 10 ft above gnd (useful only for DX) fed with 100 ft of RG213
4) Two horizontal Hamsticks, back to back, cut for 7100 kHz, 15 ft
above gnd testing for portable use only
The Hamsticks are always 2 S units weaker than the dipoles,
regardless of stations worked, so I don't use them for nbems nets
But I know how they compare to a full-size dipole, and they would
work portable if that was all I had.

I think most of the ops on 40m daytime nbems nets are probably using
low (under 40 ft) HORIZONTAL center fed dipoles
or OCF dipoles or G5RV antennas, or maybe some Inverted V
dipoles, or even "long wires" fed against ground .....

verticals with low-angle radiation won't be successful for high angle
(short range) NVIS.

7302. RE: [paNBEMS] a few observations from a net control op k3eui

Yahoo group: paNBEMS (2012 — 2018)
Date: 2016-08-12 17:00:34 UTC
From: Tom Smith
Topic: 7299 Message: 7302

Good question. I think the answer may be Yes and no. Most horizontally polarized dipoles radiate in a 360 degree “doughnut” around the wire. Height above ground and ground conditions also play a big part.

Vertical antenna tend to radiate iv a vertical doughnut with little or no vertical radiation. Good for sky wave bit not NVIS.

Good links below. Save’s us a lot of explanation.

Dear Pa NBEMS folks

Let me first introduce myself: Barry, K3EUI, from West Chester, PA

about 20 miles west of Philadelphia. I've been an amateur radio op since 1958 but just joined the PA NBEMS group and became a net control op in the last year. My two favorite topics are sound card digi modes and antennas and propagation of HF waves (skip). I'm a retired Physics teacher/professor.

The purpose of the PaNBEMS net is to be able to send and receive emergency messages across the state. Hence we need training on how to do that ... and practice, practice, practice. The net currently operates on a frequency of 7072.5 kHz (usb dial frequency) using either Olivia 8/500 or CONT 8/500 for check in and usually MFSK32 op mode to send traffic.

When I began as one of the net control ops (last winter) propagation of 40 meters was pretty good, with no sign of a "skip zone" (a region where you cannot hear net control) at 11 am. On some Sunday's we were seeing over 30 checkins and a few pieces of traffic (usually ICS 213 FLMSG) or FLAMP.

All was well.

Since the summer began, "fickle forty" has not been so kind to use. As a PaNBEMS net, we rely on all stations being able to hear the net control station. With current propagation conditions (view an Ionosonde from Wallops Island or from Boston) the "critical frequency" (radiation straight up comes straight down) has been well below 7 MHz. That translates to this condition: if you are within 100 miles of the net control you are unlikely to hear the net control start the net. Well, it is obvious that if you can't hear net control, the net control won't be able to hear you. That has been the situation for a few months now.

Fickle Forty meters has a definite "skip zone" now and will likely have a sizable skip zone until next winter. That creates considerable difficulty for us, as a state-wide net. We need to be able to hear each other and PA is about 300 miles wide. What are our choices?

We can continue to operate on Sunday late mornings, 11 am, on 7072.5 and just do the best we can. We make more use of "relay stations" which are often 100-300 miles from the net control op. Last week I was the net control, and received quite a few checkins as a relay from Duane N6RVA in NNY.

That creates some frustration ..... if a station can't hear net control, then that station has no idea if the net has actually started. So does that person transmit at all, or worse yet ask "where is the ncs?" That just begs other stations to respond and the frequency becomes one giant QRM mess. I see that as not a very good situation for a state-wide NBEMS net.

So here are some options for us.

It seems to me that we have two distinct issues to overcome.

1) How do deal with the prevalent "skip zone" on 40m?

2) How to speed up the checkin in process and practice sending traffic?

So I'd like to speak to each of these.

First .... skip zone.

There is nothing we can do to change the ionosphere's behavior.

Our RF waves have to do two things: get thru the absorbing D layer, and then get refracted by the F layer, and come back through the D layer again and finally reach our antenna and be heard in our receivers. Remember, that's through the D layer twice. The D layer is our enemy.

Getting through the D layer means we cannot go too low in frequency.

Lower frequencies (160 and 80 meters) get almost completely absorbed by the D layer once the Sun has been up for a few hours. So by 11 am, the D layer pretty much wipes out 160m and 80/75m as operating bands, and makes 40 meters a bit iffy.

Even if our RF gets through the D layer, it must then be refracted by the F layer and come (almost straight) back down to avoid a "skip zone". The problem is that the higher in frequency we go .... 20m, 15, 10m ..... the less refraction occurs, so the angle of the refracted RF gets more oblique (shallow) .... good for DX but lousy for a state-wide net. So we all know that we would not dream of starting a HF PA NBEMS net on 10 meters or 20 meters. All of our RF would end up in Florida or Europe or S.America.

So what we want (and need) is a band where our RF can come back within a zone of 10-300 miles from the net control station .... someone in PA somewhere. Presently three of our net control ops are in the Philadelphia region (NY3J, N3FLL, K3EUI) all within 30 miles of center city Phila. So stations in EPA right now are having a hard time hearing a net control op near Phila. In fact, the present skip zone (about 100 miles) precludes many stations in EPa (and NJ) from hearing any one of the three control operators in the Phila region.

So here is my idea .... something the net control ops have been discussing now for about a month.

What if we (the PA NBEMS net) were to move the net to a lower frequency and operate earlier in the daytime? Experienced ops on 75/80 meters tell us that the best time for a regional or state-wide net might be from 8 am to 10 am. Operate a 75 meter net at 6 am and you hear stations from hundreds or thousands of miles.... better for DX. Operate a 75 meter net at noon, and you hear almost no one (D layer absorption).

So here is my proposal: we move the PANBEMS net to 3583 kHz (usb dial frequency) and move the net to 8:00 am Sunday morning. We can mess with the frequency a bit. We stick with checkin modes of Olivia 8/500 or CONT 8/500 since CONT works a bit faster. Both are pretty good, but a bit slow.

At 8am the MUF (d=100km) is often around 5-6 MHz, so 3.5 MHz is an almost ideal frequency for a NBEMS net.

Operations:

To speed things up: the net control op first asks stations to check in ONLY if that station has traffic to pass to the net. Stations (with traffic) from anywhere check in, get acknowledged by NC, and then stations send their traffic with MFSK 32 (or any mode we might find works well at 8 am on 80m).

Assuming the net control copies the traffic, we do not do RESENDS until the very end of the net. After traffic has been sent, the net control operator then asks for general checkins, moving through the PEMA regions of WPA, CPA, EPA and then by FCC call areas: 1, 2, 3, 4/8/9 and anywhere in US and then outside of US. After all checkins have been acknowledged, then the NCS asks if anyone needs any resends of any of the traffic. Stations who have copied all of the traffic can leave the net (they do not need permission to leave the net) and the net continues until all stations have received all of the traffic.

This took longer to type than the net would normally run!

A few of us have been checking on propagation on 3583 kHz at 8 am, 9 am, 10 am, and 11 am, and noon. Basically we find propagation is pretty good from 30-300 miles anytime after the Sun has been up for a few hours. But by 11 am there is just too much D layer absorption to make 80m work. So moving the net to 80m but keeping it at 11 am, just solves one problem and creates a new problem.

Moving a net to 8am will be a difficulty for some (personal issues).

So maybe we keep the 40m 7072.5 net going at 11 am until next winter, when maybe it will return with a smaller skip zone.

Operation of checkins:

Here is one more (wild) idea to consider.

DX stations (like net controls) need a CLEAR frequency to be heard.

What if ..... we were to try having the net control op on one frequency, and the rest of the net up or down 500 Hz? That way, everyone could copy the net control without the QRM we sometimes get when two or more often many ops transmit on the same frequency.

Operating "split" might work even better if we were to try a narrower bandwidth mode, like Olivia 8/250 or 4/250. Net control transmits on 3583.0 kHz using Olivia 8/250 or Olivia 4/250 and everyone else transmits on 3583.5 kHz using the same mode. All ops could "lock" their transmit frequency on the waterfall at 2000 Hz using the FLDIGI "LK" button and listen for NCS at 1500 Hz on the waterfall .... (or use the XIT feature or RIT feature on their radio and keep 1500 Hz on the waterfall). Just a thought .... ncs always has a clear frequency (it works for DXpeditions).

Even wilder yet, if we were to use a mode like PSK31 or PSK63F the stations checking in could use ANY frequency within 1 kHz of the net control, and with the FLDIGI Signal Browser turned on, the net control could copy more than one station at the same time (but on different frequencies). Wow ... interesting idea! Might drive the NCS crazy, but it would get faster checkins!

TRIAL

So this Sunday, I will be listening on 3583.0 kHz (upper sideband, dial freq) with Olivia 8/500 and see how many stations can copy me. If we try this for a few weeks, and IF it works better (with no skip zone) than 40 meters at 11 am, then we have some evidence to at least consider moving the PA NBEMS net to a new (earlier) time and to a lower frequency, something BELOW the MUF for d=100 km

60 meters?

Personally, I like 60 meters even better than 80 meters for a NBEMS net.

60 meters (5 MHz) offers us a wider bandwidth (2.8 kHz) and we can use voice for checkins and pass traffic with a faster mode like MFSK 128.

But that's another story.... some older rigs will not TX on 5 MHz.

But 60m was acquired with EMCOM in mind.

Comments? Please share.... I know change is a challenge but maybe we have to also adapt our net to the band conditions.

I am NCS for the WV NBEMS net. I think the best option might be 60 meters for a couple of reasons. First, MARS and DOD use 60M as an interoperability band with amateur radio which brings up interesting possibilities for future joint drills and activations. Second, there is much speculation on what the sun may do for the next few cycles but the possibility of a solar minimum makes utilization of lower frequencies more attractive. Third, NVIS on 60 meters is very effective. Granted not all radio amateurs are set up for 60 meters but most modern transceivers are set up for it. Just my 2 cents.

Good points but let's not make to much of using 60 meters. MARS and the amateur community have always been able to use it. The only difference is that for this one dsy MARS operators can use their MARS callsigns talking to amateurs as opposed to their FCC callsigns. We're all supposed to be at least general class so have HF privileges.
We've been doing this interoperability for a good while now, meeting amateurs on the amateur bands with our amateur callsigns.
Works great

Sunday Pa NBEMS Nets

Besides the regular Pa NBEMS net this Sunday at 11AM on 7072.5 I will be NCS for a trial net at 8AM on 3583. I will be using Contestia 8/500 for the start of the net and switch to MFSK32 for traffic. At the start of the net I will call for traffic/practice messages from stations anywhere. It would be good to have more messages sent for training purposes. After that I will ask for check ins. After check ins there will be an opportunity for message resends.

Since we are comparing propagation properties between 80 meters at 8AM and 40 meters at 11AM I would appreciate an email with a report at my call at ARRL. An estimation of your distance to Philadelphia and what kind of antenna and power you are using.

Heard the net open loud and clear. I'm in Chester County, just outside the back door of Valley Forge Park. I read the call for traffic and initial check-ins before moving to another net.

I think I read that NCS called for stations with traffic and said they would have them send it before taking check-ins for stations without traffic. This is incorrect procedure. NCS cannot direct a station to send traffic to another station unless the receiving station is in the net (meaning they have called into the net and have been acknowledged by NCS.) If the intended destination station doesn't enter the net, the originating station must hold the traffic unless another station in the net accepts it.

I am glad to see amateurs work, training to handle traffic on these nets. That's why we run them. Let's be sure we train to the correct standards.

Hi Tom,

Thanks for your input. Because of the propagation patterns these days I thought that it would expedite the net to call for traffic early. If there was any traffic addressed to a specific call or area I would have made sure there was another station to accept it. There were 7 messages so a lot of "Amateurs" thought that this was a good idea.

Monitoring strong signals this morning but no decode, then read this email and noticed use of Contestia vs the usual Olivia. Later mode switch to MFSK also did not work automatically; I saw the text and changed manually. I do have RxID selected in Fldigi.

The only thing I can guess is you can select individual modes for the RxID switch with a check mark in configuration. I used Contestia because it's a little faster than Olivia to make the check ins go quicker. Thanks for the report and hopefully we will see you in future nets.

I noticed that my FLDIGI did not switch modes when the net opened and again when it went to MSK32. I had to manually select the mode before it would decode. I did see the TXID block come through for MFSK32 but not for anything before that.

Ron:

No problem. You certainly have the prerogative to run the net to get the best results towards its objectives. I was just reaching out because I've always been trained that we should "Train as we will fight" because we fight as we are trained. NBEMS is intended to be a serious messaging mode, so I would assume the we'd want to have its users learn and practice under more realistic conditions. Operators can be expert in the use of the software but it they aren't up to speed with its employment in net operations, there's a potential for difficulty.

Anyway, the 80M net is a great idea. Thanks for stepping up and doing it.

The only small issue I see is that it will conflict with the 0800 Eastern Time Pennsylvania ACS first Sunday monthly net and subsequent PA ACS Central and East nets at 0830 and 0900 Eastern. Nothing to worry about, though. Hope to find it up and running on following Sundays. Too many choices is far better than not enough.

De KC3EDP, I could read Messg's while being sent but before a "open" with FLMSG said contained errors.
I have not tried, but for those that can, would a NVIS dipole height of 10 feet or less and a setting of 120 Degree apex angle be of any use? So says a expert Michael Chesbro.

Hi John,

Did you click open anyway and see if it would open. For accuracy you should receive the Flmsg error free and ask for a resend when you don't. If you open it with errors you at least get what the message is saying and you may be able to just ask for fills. If you can read the message in the Fldigi window then you may still be able to see what the message is about but you still should check for fills. If the Flmsg is sent compressed then you won't be able to read it as you receive it on the Fldigi receive window.

That antenna you describe may be like a NVIS antenna. Give it a try. My off center dipole is only about 35 feet up and may be close to NVIS. I'm still testing various configurations for local and state wide contacts. Thanks for the report.

7316. Optimum height for a nvis dipole

Yahoo group: paNBEMS (2012 — 2018)
Date: 2016-08-15 12:00:39 UTC
From: k3eui@aol.com
Topic: 7316 Message: 7316

Hi
There is some debate about the "optimum" antenna heigh of a 80/40 meter dipole for NVIS (vertical radiation). I've seen anything like 10 feet to
1/10th wavelength (8 meters or 25 feet for a 80 meter dipole).
When very low, the noise it picks up is usually less.

I've tried 40 ft, 20 ft, and 10 feet for a half-wavelength 80 m dipole and hardly see any differences for short ranges (20-400 miles).

Just don't use a vertical antenna on 40/80 meters for NVIS!
Verticals put out mostly low-angle RF good for DX.

At a height of less than 1/4 wavelength above ground for a dipole
or any horizontal antenna (Inverted V) azimuth won't matter (no directional preference).

Watch out .... as you get lower in height something else happens....

If you set up an 80 or 40 meter dipole very close to (reflecting) earth,
the impedance will drop, sometimes as low as 10 ohms.
I've tried a 80m dipole ten ft above ground and the impedance was 12 ohms.
With 50 ohm coax, the SWR is 5:1 on your entire feedline.... which may create other difficulties in your rig if you don't employ some kind of "transmatch" (antenna tuner) to make your rig happy.

But at 80 meters, reasonably high SWR (say 5:1) on good quality coax
(say under 100 ft) produces very little change in actual RF emitted IF IF IF
the rig can be made to deliver all of its power (by a tuner at the rig).
Usually the "additional loss" due to 5:1 SWR on 80 meters is less than 1 dB..... something the receiving station will not notice.
Of course, on 10 meter or VHF/UHF you want to avoid high SWR on the feedline for obviously more attenuation.

A trick ..... well, not really a trick... a remedy ..... based on sound physics ....
If your 10 ft above ground dipole does have a low impedance (10 ohms) then put an inductor across the feedline at the antenna and that will raise the impedance of the antenna ......
there are calculations for this ...

but just try a coil of say 2 inch diameter with something like 10-20 turns
and see if the measured SWR at your rig is lower than without the coil.

The coil will also lower the resonant frequency of a 80/40m dipole a bit,
so you may have to shorten the dipole from the expected length.

Consult a good antenna handbook for more details.

7318. Re: [paNBEMS] trial 80m 8a.m.

Yahoo group: paNBEMS (2012 — 2018)
Date: 2016-08-15 17:10:09 UTC
From: W. T. Jones
Topic: 7299 Message: 7318

The procedure of asking for stations with Traffic (and the proverbial following phrase of "and traffic only") first has been a staple in NTS nets for years. Case in point is the Eastern PA Emergency Phone and Traffic Net and the pertinent section of the preamble is:

The net will stand by for stations with emergency or priority traffic, emergency or priority traffic only, call now. 3rd region representative, call now. Stations with traffic and with traffic only, call now.

****

EPAEPTN, listing traffic for _______, anyone who can help with this, or other stations with or without traffic, call now.

****
So the NCS will get any urgent stuff on the plate. If there is any 'E' or 'P' traffic he will immediately call for any stations that can help with passing that traffic. After that he'll get the representative from the higher level NTS Tier who may be bringing traffic from other regions, sections, or areas to the net. He then wants any station holding traffic that net will need to address to list it. Once the marquee is filled with the attractions the NCS will make the listing announcement and ask for stations who can help with it to come on board. Stations who cannot handle the traffic can bide their time and let the net handle the business at hand.

The EPAEPTN has been in existence since 1957. Still works today and we really could use more members. It meets on 3.917mHz at 6:00PM Eastern time each and every night. Sorry for the shameless plug here.

This practice has been a long standing NTS practice going back to the 1920's. See "200 meters and down" by Clinton DeSoto.

It is was also used by the Marine Coastal Stations when they were prevalent. List the traffic available on 500kHz and when there is a taker move to the stations assigned working frequency. See the Maritime Historical Society web site at: http://www.radiomarine.org/

So the practice of calling for traffic first has a solid historical precedence that still has logical value today for obvious reasons of efficiency. When the propagation has been a volatile as it has been it makes sense to get the business of the net done and then move on to the social aspect of the net. And some stations may be listening who do not hold any net business but if traffic is listed for their area they join the net to take it. Some times what they are doing makes joining the net to just say "no traffic" or type it in our case would interrupt something that need to accomplish. Hearing traffic listed for them will trip the trigger and then they join.

Our digital communications are fun and interesting. Things to have some good fun with and experiment to see what works and what doesn't. Some of the net procedures that we should borrow from our fone and CW brethren work well and others need to flex and change. Anyone who says this is the only way to do something becomes eminently ignorable because as soon as some one thinks something is carved in concrete a better way comes along to upset the apple cart and the experimentation starts all over again.

BTW, that phrase of "Train as we will fight" is rather old advice too. I have had it on my web site for a long time because I am old. Not as old as the original author of the phrase but old.

"We don't rise to the level of our expectations. We fall to the level of our training." Archilochus - Greek Poet and Soldier

But it is true as Tom pointed out. No matter how the net is run the only value that comes out of it other than moving the traffic is the practice and fun it gives to the people who give it a try. It sure would be nice if a communications planner could count on the same number of good fldigi operators as he could the number of untrained HT owners.

What I really want to know is why can't I just sit down and write a one or two line email? I didn't kiss the Blarney Stone. I bite off a chunk of it. I really need to work on brevity here.

Have a great day everyone!

Regards,

W.T.

From: <k3cc@...>
Topic: 7316 Message: 7319

The take off angle depends on the amount of radials or the of moisture in the ground system....Foe a rock hard
ground most of the signal will be straight up in the air with a few degrees off center....

If you use No radials you will have near vertical incidence... Inverted Vee antennas are fine and take up less space. After many years of testing mobile antennas, most antennas above 80 meters are about the same....Below 40 as in 80- and 160 you have different issues......a ground mounted wire vertical antenna will perform on 80 without
ground wires.... If you want an analysis try “Terrain Analysis” in contesting we use it to our advantage for average
height above ground for different types of prop...

still the bottom line is having a communication system for Pennsylvania.... Using FLdigi and digital modes....

If you can not hear stations on one side of the state or another, form local VHF/UHF nets....

The interest of PEMA during the winter and summer storms are road conditions, winds and damage.... They are not interested in NY, NJ and anywhere else.... Just PA..... winter storm travel on interstate and local roads are
necessary for distribution of resources, salt trucks, plows etc. also heavy snow damage reports of roof damage and cave ins...

Local mobile stations can give realtime reports of road conditions on VHF/UHF nets then sent to state wide nets....

Instead of worrying about antennas and band conditions use what we have and promote more participation with local groups in your area....We have 3 regions in PA ACS......We should find folks in these 3 regions who can work on another or other stations during poor propagation..... Do not reinvent the damn wheel......You spend more time playing games then learning how to use the digital messaging system to resend and send info....

Find a station who has the ability to work through the prop or via local VHF/UHF...... Try diversity reception ?
Work with what you have .....

de Skip

We are here to serve ACS/RACES and PA PEMA and local agencies....

Subject: [paNBEMS] Optimum height for a nvis dipole

Hi
There is some debate about the "optimum" antenna heigh of a 80/40 meter dipole for NVIS

(vertical radiation). I've seen anything like 10 feet to
1/10th wavelength (8 meters or 25 feet for a 80 meter dipole).
When very low, the noise it picks up is usually less.

I've tried 40 ft, 20 ft, and 10 feet for a half-wavelength 80 m dipole and hardly see any differences for short ranges (20-400 miles).

Just don't use a vertical antenna on 40/80 meters for NVIS!
Verticals put out mostly low-angle RF good for DX.

At a height of less than 1/4 wavelength above ground for a dipole
or any horizontal antenna (Inverted V) azimuth won't matter (no directional
preference).

Watch out .... as you get lower in height something else happens....

If you set up an 80 or 40 meter dipole very close to (reflecting) earth,
the impedance will drop, sometimes as low as 10 ohms.
I've tried a 80m dipole ten ft above ground and the impedance was 12 ohms.
With 50 ohm coax, the SWR is 5:1 on your entire feedline.... which may create other difficulties in your rig if you don't employ some kind of "transmatch" (antenna tuner) to make your rig happy.

But at 80 meters, reasonably high SWR (say 5:1) on good quality coax
(say under 100 ft) produces very little change in actual RF emitted IF IF IF
the rig can be made to deliver all of its power (by a tuner at the rig).
Usually the "additional loss" due to 5:1 SWR on 80 meters is less than 1 dB..... something the receiving station will not notice.
Of course, on 10 meter or VHF/UHF you want to avoid high SWR on the feedline for obviously more attenuation.

A trick ..... well, not really a trick... a remedy ..... based on sound physics ....
If your 10 ft above ground dipole does have a low impedance (10 ohms) then put an inductor across the feedline at the antenna and that will raise the impedance of the antenna ......
there are calculations for this ...

but just try a coil of say 2 inch diameter with something like 10-20 turns
and see if the measured SWR at your rig is lower than without the coil.

The coil will also lower the resonant frequency of a 80/40m dipole a bit,
so you may have to shorten the dipole from the expected length.

Consult a good antenna handbook for more details.

De KC3EDP, I could read Messg's while being sent but before a "open" with FLMSG said contained errors.

I have not tried, but for those that can, would a NVIS dipole height of 10 feet or less and a setting of 120 Degree apex angle be of any use? So says a expert Michael Chesbro.

Curt (K3URT) and all PA NBEMS ops

There may have been a mixup as to who was the scheduled net control for
last Sunday's PA NBEMS net, August 28th.

I also did not hear any net activity (other than folks asking whether the net
had begun) until close to 11:30 Sunday morning.
Two EPA net control ops (K3EUI and NY3J) concurred that there was no net
activity we could hear from our qth near Philadelphia.

So I began the net 30 minutes late, around 11:30 am.
By then, many stations that would have checked in had left the frequency.
We had about a dozen checkins and a few FLMSG messages sent
in by KD2DO (NNY).

We net control ops will try to get better organized.

Meanwhile, the forty meter "skip zone" continues to plague the net
with very weak ionospheric refraction for distances 30-100 miles
due to the vertical "critical frequency" staying well below 7 MHz.
If interested, check out Ionosondes from Wallops Island and you can
see what RF frequencies are refracted back to ground.
The MUF (max usable freq) for d=100 km is around 5-6 MHz
so we are bound to get very little RF back to ground at 7 MHz.
I noticed stations >200 miles from me are consistently stronger than
stations <100 miles from me. Stations from WPA, New England,
North Carolina, and Canada are almost always 100% print.

Please stay tuned, literally, to 7072.5 kHz Sunday at 11:00 am.
If you do not hear any net activity (no net control and no one checking in)
then please do not transmit "where is the net". It just could be that propagation
is still "long" and you are in the skip zone. I even heard one station start to
call CQ on 7072.5 and asked them to QSY up a bit.

We will experiment for the next few months with net control or relay stations
on each side of PA. If anyone in the WPA region would like to volunteer to
help relay messages, or be an alternate net control, then please get in touch
with me (k3eui@...) and we may be able to deal with the "fickly forty"
meter skip zone propagation.

80 meters earlier hours
Meanwhile, a few of us have been regularly checking out 3583 kHz at 8:00 am
Sunday using Olivia and find signals are very strong for short range (30-100 miles) and
only gradually dropping off for signals around 200-400 miles.
I typically run 100-200 watts into a low 130 ft dipole.
As anyone who operates on 75/80 meters knows, as the Sun warms up the
D layer of the Ionosphere, absorption increases steadily from 8 am to noon.

So using 3583 kHz at 11:00 am is also a problem in terms of increasing absorption.

I'll continue to do brief checks of propagation on 3583 kHz (usb dial freq) at 8:00 am on Sundays and will be asking for signal reports (S/N) and your location (distance to Philadelphia).

Again, please continue to participate in PA NBEMS as we think about the best way to make a state-wide NBEMS net work.

OK, I will try this again on Wednesday night.
Sorry for the inconvenience last Wednesday but I had to pull the plug as lightning bolts were raining down from above. Hopefully, the weather will cooperate.

7327. PaNBEMS Net 9/11/2016

Yahoo group: paNBEMS (2012 — 2018)
Date: 2016-09-11 22:10:32 UTC
From: Ron Wenig
Topic: 7327 Message: 7327

Frank, N3FLL, congratulations on the way you handled having to move the net two times to get away from the exercise that was on 7.0725. Good job and good job on the net participants following you as NCS up the band. That was a good example of net procedures when something like that happens. I was wondering did you move the VFO of the radio or did you just click another sub frequency on the waterfall.

Also, it was amazing how the signals behaved. At the start of the net I couldn't copy you at all. You are about 30 miles wsw from you. Then at the end your signal really came up along with other stations I couldn't copy. I don't think I will ever understand the way RF propagation works.

73, Ron NY3J

7328. Re: PaNBEMS Net 9/11/2016

Topic: 7327 Message: 7328

Thanks Ron but I should have moved sooner when KD2DO mentioned the other net.

I did notice a very noticeable improvement in all signals near the end.

I changed radio frequency, I like to be at 1500 Hz on the waterfall.

73,
Frank
N3FLL

Note on propagation

At 9:30 am the propagation on 40m was still "long" with very little
propagation under 100 miles. I heard few stations close in during the
NJ NBEMS net on 7073 kHz. Ionosonde from Wallops Island showed
no vertical return echoes for 7 MHz.

At 11:00 am the band changed enough to allow more vertical incident refraction, hence
signals were quite strong for distances under 100 miles,
yet signals from N NY, VA, and NC were all better than + 10 dB s/n.

By the end of the 40m net, close to noon, NY3J was + 15 dB s/n here into West Chester, PA a
distance of only 40 miles.

When there is no "skip zone" on 40m we have fantastic signals near and far.

Great job by ncs NY3J

Here are the reports from the 18th.

Sorry I was not there for the 8AM go around but I had Triathlons to communicate for.

N2CDH turns out to be an invalid call and was not included in the report.

7335. last Sunday net on 40m

Yahoo group: paNBEMS (2012 — 2018)
Date: 2016-09-26 11:56:14 UTC
From: barryfeierman at yahoo
Topic: 7335 Message: 7335

Dear Pa NBEMS net

I apologize for the confusion that happened yesterday on the PA NBEMS net at 11:00 hr on 7072.5 kHz.

There was a mixup as to who was the net control operator, and band conditions were so poor that folks could not copy each other who were within the fickle forty meters "skip zone" (about 100 miles yesterday).

Ron NY3J and I (K3EUI) heard many stations trying to check in, but were not being recognized. That's what happens if there is no net control.

The net managers will try to do a better job in the future having a ncs on duty.
We could use more help from WPA region, so any ops in WPA who would like to participate as relay stations, or net control ops, please get in touch with me (Barry k3eui)

What should you do when you do not copy any net control ?
In general, if you do not copy any directions from a net control operator, then do NOT transmit on 7072.5 asking "who is net control?"
Do NOT drop your call, asking for a relay, and do not begin a conversation with someone you do hear. That just makes the frequency unusable for a net.
Please move off frequency by 500 Hz if you want to start a chat with someone.

I realize that the distant stations, in VA, WVA, GA, Ohio, New England and even Canada are often at a location where they can hear all of us in Pennsylvania.
So we will try to do the best we can, with given (long) 40m band conditions.

I'm also wondering if CONT 8/500 is a better mode for checkins than Olivia 8/500. CONT moves at double the speed of Olivia, with most of the s/n advantages.

80 meters
Some of us are testing FSQ mode on 3583 kHz at 8:00 am every day.
Propagation seems much better than 40m, with NO SKIP ZONE.
The vertical incident critical frequency (MUF for D=0 km) seems to hover around 5 - 6 MHz, making 7 MHz a difficult challenge for coms within 100 miles of a net control operator.
A net on 3583 kHz earlier in the day would experience NO skip zone, a plus for a Pa state net.

thank you, and agn, we apologize for the mixup yesterday

7337. seeking additional net control ops from WPA and CPA for PA NBEMS net

Yahoo group: paNBEMS (2012 — 2018)
Date: 2016-09-27 16:15:53 UTC
From: barryfeierman at yahoo
Topic: 7337 Message: 7337

********** HELP **********

We are seeking additional net control operators from Western and Central Pennsylvania sections for the 40 meter PA NBEMS net at 1100 hr on Sunday mornings: 7072.5 kHz (usb dial frequency) with Olivia 8/500 or CONT 8/500 checkin mode.
Traffic is mostly sent using MFSK32.

Conditions on 40m continues to have a 30-100 mile "skip zone" and
often stations within 100 miles of the net control cannot copy net control.
We currently have no net controls from WPA or CPA.

Three of the net controls currently live in the Philadelphia region, and the fourth is up near Scranton.
We in EPA often copy stations in WPA, CPA, and outside of PA.
Often the strongest signals I hear are from VA, OH, NC, NY, and Canada.
So stations outside of PA are invited to submit their names.

If you are interested in being a net control operator one weekend per month,
or an additional RELAY station each week, please contact k3eui (Barry) directly at k3eui@... rather than responding to the list.

80 meters and NBEMS in the morning
We have tested 80 meters at 0800 - 0900 hr to know that there is no "skip zone" so a group of us are suggesting the beginnings of a new NBEMS Digital Training Net on 3583 kHz at 0800 hr local time.
We are calling this the "Mid-Atlantic NBEMS Net".
We encourage folks from PA, NY, NJ, MD, and DEL to participate.
Others from a greater distance are always welcome of course.

A few of us have been experimenting with the FSQ mode (FLDIGI has it)
and we are learning about FSQ's pros and cons. So please join us on 3583 kHz each day of the week at 8:00 am. We may be on Olivia or FSQ.
If 3583 has a qso, look for us a few kHz up the band.

Thank you,

Barry Feierman k3eui
West Chester PA

7341. still looking for WPA net control and relay stations for Pa NBEMS

Yahoo group: paNBEMS (2012 — 2018)
Date: 2016-09-30 15:09:12 UTC
From: barryfeierman at yahoo
Topic: 7341 Message: 7341

********** PA NBEMS net **********

I am still looking for additional net control and relay stations
from *Western PA section or any location >200 km from Philadelphia
*to aid in the PA NBEMS net Sundays 1100 hr on 7072.5 kHz (usb dial
freq)

We will use either Olivia 8/500 or CONTESTIA 8/500 for checkin mode

With a current 40 m skip zone of 100 km or more, we are looking
for folks >200 km from Philadelphia to aid in the check in process
and to help relay traffic.

All four of our net control ops are currently on the eastern or northeastern
part of the state of Pa.

Thanks

please contact me direct at *k3eui@...*

Not that I know of at this time; all I've been informed of by the EC here in Northeastern Ohio is the voice nets. However, that may change at any time, so I would suggest monitoring the normal NBEMS frequencies for your area.

Attachments: 1 described; binary payloads are missing from this source WARC

PaNBEMS

YEAH.....

We may finally be out of the 40 m skip zone era for 2016.

I was listening in on the ECARS 7255 LSB voice net and propagation
was excellent at 10:45 am

from 20 miles to 400 miles from Phila.

I went to the Millstone Ionosonde (Boston area) and wow .... look, the
MUF for short distances was up to 8 MHz.

So that means "NO SKIP ZONE" on fickle forty meters.

I was also hearing NY and Long Island repeaters on 2m FM (into Phila)
which is very unusual.

We should have great signals on 40m on Sunday.

For those of you who can also get on 80 meters, we are trying a
"Mid-Atlantic NBEMS Training Net" on 3585 kHz +/- qrm at 0800 hr

and experimenting with different modes including Olivia, CONTESTIA,
THOR, and FSQ. Come join us if you are up that early.

Did the QSO only last for ~5 minutes? If so, it was probably JT65.

I like the digital tech very much, but it seems more like drive by shootings (perpetual contest mode) versus a QSO. No, I don't need anything like the filibuster rag chews, but a little bit more.

Sorry for the thread heist and rant

Hi Pa NBEMS participants

At 11:00am local time every Sunday morning, a net control operator will begin the PA NBEMS net either on Olivia 8/500 or possibly CONT 8/500 for preamble and checkins.

If you do not hear any net control start the net, then please just wait for instructions on the net frequency: 7072.5 kHz (usb dial frequency)

Do not transmit and ask "is there a net control op today?" or something like that. You will just create QRM on the net frequency.

Most likely you are in the net control's *"skip zone"* (you are too close to the net control and do not hear the start of the net).

Just wait... do not transmit until either you do hear net control, or you hear a RELAY station ask for checkins that the net control is missing.

Three of the current net control operators are in the Philadelphia region (EPA region) and so if there is a 10 - 100 km skip zone,

the net control likely won't hear you if you are inside of that skip zone. There is nothing we can do about that.... "fickle forty".

Be sure you have a horizontal nvis style antenna..... vertical antennas do not work well for NVIS.

Be patient, and you should hear a RELAY station from a region not close to the net control ask for checkins with or without traffic.

Check in only when your regions is called: WPA, CPA, EPA, and call areas 1,2,3, and 4/8/9 and then anywhere.

Check in simply with your call, your county, your state and let us know if you have traffic (QTC) or no traffic (QRU).

We will sometimes ask for stations to check in first who DO HAVE TRAFFIC, then send the traffic,

and then take general checkins, doing any RESENDS at the end of the net.

We begin the net at 11:00 am and hope to finish up before noon.

We are also experimenting with a new *"Mid-Atlantic NBEMS Net"* Sunday mornings at 0800 hr on *3585.0 * kHz (usb dial freq)

Being on 80 meters, below the vertical critical frequency, we have not experienced any "skip zone" on 80 meters.

We do fight QRN noise issues, sometimes QRM from adjacent stations, and some funny ionospheric doppler shifting at times.

==========

The PA NBEMS net is still looking for additional net control operators, especially operators in Central or Western PA.

If you are interested, contact me, Barry, k3eui@...

Thank you,

Barry k3eui West Chester PA

Pa NBEMS group

I don't think I have ever seen an Ionosonde like this one (Millstone Boston area)

It is Friday morning, 9 am local time.

NY3j, N6RVA, and I are all on 3585 kHz Olivia and signals are all over the place with rapid QSB of 20 dB or more.

What does this Ionosonde show about 80 meter propagation???

There are no return echoes at all below 5 MHz

Here is the 9:40 am Ionosonde from the Millstone Hill (Boston area)

which is the cleanest ionosonde I have ever seen with very clean returns

around 7 MHz.

Our MidAtlantic NBEMS net at 8:00am on 3585 was excellent propagation
as well.

Maybe that is why signals on the NJ nbems net (7300 kHz) are so good
right now

from ncs Bill kc2vut as well as WPA and N NY stations.

WT - looks like a good omen for you as ncs today on PA NBEMS at 11:00
on 7072.5 kHz.

7359. olivia vs mfsk for nbems nets on 40m

Yahoo group: paNBEMS (2012 — 2018)
Date: 2016-11-28 15:06:57 UTC
From: k3eui at aol
Topic: 7359 Message: 7359
Attachments: 2 described; binary payloads are missing from this source WARC

PA NBEMS group

Have any of you experimented with comparing MFSK vs. Olivia on NVIS paths?

NY3J and I (K3EUI) were comparing * MFSK * and *Olivia * this morning on 3585 kHz at 9 am.

Both are great modes for NVIS on the low bands and are widely used for the NBEMS nets in PA, NY, NJ.

Here are the _audio _spectra of *MFSK 16* and *Olivia 8/500* which are both about 500 Hz wide

but have very different baud rates, _*sidebands*_, and wpm rates, and FEC.

I got these audio spectra from monitoring my own TX audio in the radio's MON jack while on 80 meters.

(I get audio from the speaker jack)

I used the Win 7 app *SPECTRUM LAB* to record the _audio _spectrum.

Note these are not RF spectra.

It's easy now to "see" or confirm what I think I hear ... the 16 tones of MFSK 16 (16 baud) are much _more distinct_ than the 8 tones on Olivia 8/500 (63 baud)

maybe because each tone with MFSK 16 _*lasts 4 times longer*_ than the tones on Olivia 8/500 due to the slower symbol rate change.

Try it, see if you can "hear" the differnces in these two modes.

Does that difference make MFSK 16 easier for FLDIGI to get good print?

The slower baud may make *MFSK 16* another good choice for 40m and 80m NBEMS nets for a _*checkin mode*_ .... but I am guessing....

what causes misprints on a short nearly vertical NVIS paths on 40m or 80m ?

We often use *MFSK 32* to transmit FLMSG or FLAMP traffic just because Olivia 8/500 is way too slow for traffic.

Another observation .... Olivia seems to very "tolerant" of being off frequency a bit (10 Hz) and always starts with a LOW tone, then an

UPPER tone (boo-beep).

MFSK always starts with the LOW tone only. It seems to me that to tune in MFSK you have to be withing a few Hz of the sender's center frequency.

MFSK has an FLDIGI _option _of turning ON/OFF the AFC whereas Olivia has a constant AFC always on with no operator choice.

So for any of you who may operate MFSK 16 on HF bands, do you usually turn the AFC button ON or OFF?

So my question: Might MFSK 16 on NVIS path (say 40 meters mid-morning NBEMS net) work as well as Olivia 8/500 for a checkin mode?

Another difference: MFSK 16 has almost no delay in print .... and I like that as a nbems net control, whereas Olivia 8/500 delays a few seconds after typing.

MFSK 16 spectrum

Olivia 8/500 spectrum

I would not use the AFC with mfsk, even though mfsk needs to be tuned in with precision. Much better to get everyone to use the RxID and the TxID.

When picking the "best mode" it is important to specify best for what. When poled, the recipients of the digital messages transmitted by the VOA, the preference was for mfsk.

Our best rag chew/traffic mode for weak signals is still 32/1000 Olivia.
Wonder myself what mode might work best with thunderstorm noise, but suspect that the longer tones of mfsk might hold an advantage. However, if signals are otherwise good/strong, because of its great redundance, MT63L might be best with thunderstorm noise. It is not a good weak signal mode.

Checking into the Michigan digi net on 80 meters one Tuesday night, a hamcam back to me and suggested that there was something wrong with my signal, as everyone elses tones were fuzzy, and mine were distinct.

Different modes might require different amounts of audio drive, so using the same audio drive for different modes is not a good comparison.

Using the power limiting settings in the software and also in the radio causes distortion.

Hi folks

Propagation has been improving on fickle forty meters as we get into the winter months. I would like to run the 11:00 am PA NBEMS net tomorrow (Dec 4) using CONTESTIA 8/500 as the net check in mode... 7072.5 kHz (USB dial frequency of suppressed carrier). CONT 8/500 has about twice the wpm as Olivia 8/500.... just be patient if there are doubles.

I would also like to take checkins first for those stations who have traffic to send to the net (QTC) then send the traffic (MFSK 32) and then take general checkins (QRU) at the end of the net. That tends to speed up things. Any resends can be sent at the end of the net, if needed.

The only stations who should have their TxID turned on are the net control, and any stations sending traffic (with MFSK 32). I suggest you keep the FLDIG's AFC button in the OFF position for copy of MFSK32.

If propagation is still "long" I will seek an alternate net control or relay station to help me with the close-in EPA stations... everyone else >100 miles from my qth I should hear.

Look forward to hearing everyone tomorrow on the PA NBEMS net.

Okay, Andy.
We're on the other side of the country for this exercise but I posted because they're actually using FLMSG, which I thought was pretty cool.
I'm not sure of their mode choices. I would have suggested MFSK 64 over MT63 2k.

FEMA will hold what they are calling a "COMMEX" exercise. The details are on the ARRL HQ web site:
FEMA to Conduct Interoperability Exercise Using 60 Meters
| |
| | FEMA to Conduct Interoperability Exercise Using 60 Meters The American Radio Relay League (ARRL) is the national association for amateur radio, connecting hams around the U.S. with news, information and resources. | |
| View on www.arrl.org | Preview by Yahoo |
| |

This is significant for both the So. Terr. SSB Net and the SATERN Int. Digi Net since there will be a digital portion of the exercise using FLMSG 4 to send messages.

Andy:

Good morning

I respectfully suggest you revisit Army MARS' digital communications. Several years ago your disappointment may have been justified but it's a great deal different now. MARS and its customers don't regularly use NBEMS, but many MARS members are NBEMS capable.

I have not been impressed with the throughput or robustness of NBEMS on HF, at least the nets I have operated in. VHF/UHF for short haul is a different story.

Happy Holidays

Tom. My opinions follow several Army MARS Comex in which M110A was used on frequencies below 7 Mhz. The results were a disaster in my opinion. Constant requests for repeats due to poor propagation and poor performance of M110A when used with sound card modems. M110A is fine when the band is in shape but a terrible choice under poor conditions. The multi-carrier modes within Fldigi , and the use of FLAMP, would have been much better for these COMEX. I must also say that some poor operating (transmitting M110A without going through NCS) also contributed to some poor COMEX results. I guess that is not just a MARS problem but I do find that some MARS regions are pretty ill-disciplined in their nets.

My opinion is shared by some other MARS ops including one senior official who privately wrote to me during a COMEX with his comments about what took 30 minutes with M110A would have been done in 5 minutes with modes available within FLDIGI.

7369. No net on Dec 25

Yahoo group: paNBEMS (2012 — 2018)
Date: 2016-12-21 20:54:39 UTC
From: barryfeierman at yahoo
Topic: 7369 Message: 7369

********** Notes for the next two weeks of PA NBEMS nets *********

There will not be a Pa NBEMS 40 meter net on Sunday Dec 25

There will be a PaNBEMS net on Jan 1st.
I will be the ncs for Sunday Jan 1 at 11:00 am and for that net, I will experiment with taking checkins using THOR 22 rather than Olivia 8/500.
Thor22 is quite a bit faster (78 wpm) than Olivia 8/500 (30 wpm) so maybe we can get the checkins faster. It has about the same bandwidth as Olivia 8/500.

If there is a big skip zone, I will call on a more distant station to be an alternate net control, or a relay station.

If you don't hear a net control shortly after 11:00 am, please do not transmit on 7072.5 and ask "where is net control".... that is the worse thing to do on a directed digi net. Just be patient and listen. Prop may be long and skipping over you... just listen for a call from a "relay station".

Thor is an interesting mode with some very nice features including FEC and incremental freq shift keying (the change in pitch from one tone to the next tone determines the character). Thor has 18 distinct tones, sent one at a time, and also has a very wide tolerance for being off the sender's frequency.... you can be badly mistuned by 100 Hz and still get 100% print.

Please keep your RxID on at all times, but turn off your TxID and allow the net control's TUNE to determine the frequency of the net.

I may also experiment with THOR 22 for traffic mode as well.
We've been using MFSK32 (120 wpm) for traffic mode in the past.
We are trying to stay within the 500 Hz bandwidth guideline for HF digi modes.
It might help to stay with one mode for the entire net.

I usually take checkins from any stations with traffic first, send the traffic, and then take general checkins (QRU). At the end of the net, I will ask if anyone needs resends. We try to finish up in less than one hour.

Have a wonderful week... hope to catch you on Jan 1, 2017 at 7072.5 kHz

7370. WV HF NBEMS net schedule change

Yahoo group: paNBEMS (2012 — 2018)
Date: 2016-12-29 15:41:08 UTC
From: jagdkampf@...
Topic: 7370 Message: 7370

WV HF NBEMS net schedule change.
Beginning 1 January, 2017, the WV HF NBEMS net will be changing it's operating schedule to biweekly.
The new schedule will be 0130Z on the 2nd and 4th Wednesday of the month. Operating frequency will remain at 3.585 mgHz / 1500 Hz offset and net operations on CT 8/500. This will continue until 1 April, 2017 when the summertime schedule begins. My thanks to all who participate in the net and hopefully we can return to a weekly net in April.
N7WWA / Net Manager / WV HF NBEMS net

Hi Carl,

Thanks for the report. 40 meters has really been good to us recently at 11 am. We were worried about propagation toward the end of summer because we weren't able to work the local station within the state and we had lots of skip. I hope this keeps up because this is a lot of fun and we've been having record number of check ins. I'm not sure if k3eui monitors this forum so I'll forward this to him. Hope to see you every Sunday at 11am on 7.072.5 USB 1500 on the waterfall usually using Olivia 8/500.

73, Ron NY3J

7373. Fldig/NBEMS Training Videos

Yahoo group: paNBEMS (2012 — 2018)
Date: 2017-02-13 15:41:09 UTC
From: k4ref@...
Topic: 7373 Message: 7373

I started hosting a local digital net last week... and found the need to do some videos for those that missed it or would be newbies at a later time. So, over the weekend I created two videos for Fldigi/NBEMS training.

The first one is: "Getting Started with Fldigi/NBEMS" https://youtu.be/FKZapCXJdAw https://youtu.be/FKZapCXJdAw https://youtu.be/FKZapCXJdAw
(It basically is getting the software and installing it.)

The second one is: "Fldigi Set Up & Configurations for the New User." https://youtu.be/FKZapCXJdAw https://youtu.be/FKZapCXJdAw https://youtu.be/FKZapCXJdAw

They both, along with a lot of other training, are available on my K4REF YouTube site.
Hope they are helpful.
Let me know what you think.

73,
Rick

7378. PEMA Winter Weather Activation 3/13 - 3/14/2017

Yahoo group: paNBEMS (2012 — 2018)
Date: 2017-03-13 02:01:22 UTC
From: David Kleber
Topic: 7378 Message: 7378

Greetings all.
I just had a telephone conversation with Travis Best with PEMA and the State EOC is requesting a digital net for the upcoming Winter Weather event from tomorrow (Monday March 13) through Tuesday.
PEMA is requesting that we run from 2200 Monday through 2200 Tuesday, local time.
Please go with 3.583 USB, from 2200 Monday through 0900 Tuesday. 7.0725 USB from 0900 through 1800 Tuesday. 3.583 USB from 1800 through 2200 Tuesday evening. All spots at 1500 Center Waterfall with Olivia 8/500.
Travis asked me to also pass along his telephone and email address for contact in the event that anyone needs to reach him for any needs or to relay any priority messages.
His contact information is:Travis Bestemail: tbest@w3tmbphone: 570-279-1746
Please let us know what hours you can be active as net control stations.
I should be able to run for a good part of the day on Tuesday.
Thanks.

03/13/2017
Governor Wolf Announces Emergency Proclamation, Travel Restrictions Ahead of Winter Storm
Harrisburg, PA - Governor Tom Wolf today signed a Proclamation of Disaster Emergency in anticipation of a significant winter snowstorm that will impact the state starting Monday evening through late Tuesday, and announced PennDOT and the Turnpike will restrict speeds on interstates and some large commercial vehicular travel. Governor Wolf also announced that PennDOT will strategically deploy additional assets to areas expected to be hardest hit by the storm, including the Northeast, Poconos and Lehigh Valley.
Governor Wolf and state agencies will provide an update on preparations for the impending winter storm at 3:30 p.m. today. The briefing will streamed live at https://governor.pa.gov/live/ or https://www.facebook.com/governorwolf/.
“State agencies continue to take proactive steps to ensure Pennsylvania is ready for the incoming winter weather and Pennsylvanians should take their own precautions and prepare for adverse conditions, especially for travel,” Governor Wolf said. “We are preparing for the most significant part of the storm to hit the Eastern half of the state from Monday night through Tuesday’s commute with significant winds to follow and cause additional concerns. I ask residents and commercial drivers across the commonwealth to prepare to avoid unnecessary travel on roadways during this time – as to let road crews and emergency responders do their jobs and minimize dangerous travel.”
This proclamation is not a ‘state of emergency,’ as it does not prohibit vehicular travel on commonwealth roads, but motorists are strongly encouraged to delay all unnecessary travel and heed local road closures that may be in place. A proclamation ensures emergency resources can be procured as needed and increases protections for consumers from price-gouging.
Travel Restrictions and PennDOT Resources
To help PennDOT and PA Turnpike crews get the optimum access to the interstates and expressways during the storm, beginning at 10 p.m. Monday, these restrictions will be in

place on all interstates and expressways east of Interstate 99 and including Interstate 99: 45 mph speed limit
Ban on tandem truck trailers, empty trailers, towed trailers, buses, recreational vehicles and motorcycles.
These restrictions will be in place on Interstates 70, 76, 78, 80, 81, 83, 84, 283, 176, 180, 476, 380 and all expressways not on the interstate system. The Turnpike will have the same restrictions beginning at 10 p.m. Monday from the Bedford Interchange east to NJ and on the entire Northeastern extension. PennDOT is also cancelling all superload permits for movement on Tuesday.
PennDOT has 4,800 equipment operators, more than 2,000 plow trucks, 49 snow blowers. All of PennDOT’s 11 regions will go on round-the-clock duty beginning Monday evening. PennDOT’s goal is to keep roadways passable and interstates and expressways take priority over lower volume routes.
PennDOT will also be redeploying assets to eastern Pennsylvania, where the brunt of the storm is forecast to hit. Three Mobile Equipment Teams will be dispatched. Each team consists of five plow trucks, 10 equipment operators and one supervisor. Teams are being dispatched from PennDOT’s northwestern Pennsylvania district to the Scranton area, from the Pittsburgh area district to Monroe County near Stroudsburg and from southwestern Pennsylvania to the Lehigh Valley area.
Proclamation of Disaster Emergency Impacts
The proclamation authorizes state agencies to use all available resources and personnel, as necessary, to cope with the magnitude and severity of this emergency situation. The time-consuming bidding and contract procedures, as well as other formalities normally prescribed by law, are waived for the duration of the proclamation.
In addition, the proclamation authorizes the Department of Transportation to waive regulations related to drivers of commercial vehicles in order to ensure the timely movement of commodities, particularly food and home heating fuel.
It also provides consumer protections against price gouging by prohibiting companies from charging a price for consumer goods or services that exceeds 20 percent of the average price that the consumer goods or services were sold for in the 7 days preceding the effective date of the Governor’s proclamation.
In the event travel is absolutely necessary, motorists can check conditions on more than 40,000 roadway miles, including color-coded winter conditions on 2,900 miles by visiting http://www.511PA.com. PennDOT's Automated Vehicle Locator plow tracking tool is available for all of the more than 2,200 PennDOT-owned and rented plow trucks, with vehicle locations viewable on 511PA.

From: rwenig@...
Topic: 7385 Message: 7385

For the folks who couldn't find the Pa NBEMS net on 3/19/17 at 11AM on 7.072.5MHz at 1500Hz on the waterfall. It looks like there was some ALE activity so we moved the waterfall frequency to 1000Hz. The ALE activity started around 10:30AM and lasted to about 11:45. The RsID on Fldigi identified it as ALE but of course Fldigi doesn't support it. Also, one of the local Hams here identified it as ALE. That's the first time I've seen this on this part of 40 meters. Hopefully it was just temporary activity.

This was a good test of moving to another frequency. Everyone did a great job finding the net. Thanks to all for the check ins with having to move and the band conditions on 40 meters.

There is no ALE 144 frequency anywhere near 7072 , 7102 USB is the closest.
There is sometimes ALE 400 around 7073.

I did not know fldigi could identify ALE. RSid is not incorporated into either MARS-ALE or PCALE so I'm not sure how fldigi would even recognize it. I did some testing on a MARS channel and fldigi did not recognize anything. ALE sounding is usually short duration, 5-10 seconds at the most and usually every 20-60 minutes. In addition Listen Before Transmit should have prevented interference.

7393. From the PA NBEMS net manager

Yahoo group: paNBEMS (2012 — 2018)
Date: 2017-03-22 20:41:12 UTC
From: barryfeierman at yahoo
Topic: 7393 Message: 7393

Just to add a few thoughts about the interference last Sunday.

I have not heard this digi signal on 7072.5 kHz (1500 Hz waterfall) before so let's just wait and see if it reappears on following Sunday nets.

The interference was not a mode I could recognize by sound, but it sure was strong, and had the on/off ACK/NAK type of Pactor signal that I remember from my Pactor I days of the mid 1990's. It really does not matter to me what mode it was .... for us, it was just accidental QRM.

As net control last Sunday, Ron NY3J decided to move down 500Hz to run the PA nbems net, hoping we'd all find him... which most of us did.

Rather than move my wf frequency down to 1000 Hz, what I did was to move my VFO down to 7072.0 kHz and stayed at 1500 Hz WF frequency.... same/same result.

The NJ and NY nbems nets both meet on 7073.0 kHz at 1500 Hz WF.
Maybe we should consider doing that as well, making 7073.0 kHz and 1500 Hz WF a kind of standardized Mid-Atlantic NBEMS net frequency..... just a thought. The same folks seem to check into all three NBEMS nets.

It has been VERY frustrating for almost everyone that "fickle forty" meters has had such poor propagation for distances of 20-100 miles.... creating what we usually call a "skip zone". That is likely to continue as the solar cycle is on the downwards slope. The Ionosondes from Boston and Wallops Island VA typically now show the MUF (d=100 km) to be about 5 to 6 MHz, not even close to 7 MHz. BTW.... 60 meters is looking better!

It does beg the question..... what is the best (clear) frequency to run the PA NBEMS net Sundays at 1100 - 1200 hr?
A few of us have seriously considered moving the PA NBEMS net back to 80 meters (around 3580 kHz - 3585 kHz, usb, vfo suppressed carrier).
80 meters, in the early AM hours, is always (almost always) below the MUF for distances of 10-200 km. Thus, there is no "skip zone". I realize that 75 meters is also the voice PEMA nets around 3990 kHz (LSB) at 0900 hr ... so we'd have to take that into account if we change the time of the Pa NBEMS net.

For the past few months, I created and am still running what we affectionately call the "Mid-Atlantic NBEMS Training Net" on 3585.0 kHz (usb) at 0800 hr. We get solid copy from stations as close as 20 miles away, and reasonable copy for stations 300 miles away (for me, WPA and VA and Canada). Perhaps that is why the PEMA voice nets meet around 9 am on 75m.

Just wanted to share what is becoming quite obvious.
Running a NBEMS state net on a frequency with a large "skip zone" (hole) makes relays essential... not a bad thing of itself. But if EPA stations cannot hear when a net control from EPA starts the net, it can create CHAOS..... this happens often. Folks type "where is the ncs today?" .... which just leads to more QRM.

So please, if you do not hear a net control come on at 1100 hr on 7072.5 kHz then just wait until you do hear a relay station ask for checkins.
Do not transmit until you hear someone ask for checkins!!

Comments? Ideas? Let me know, as I am now the net manager.

And I am still looking for additional net control ops from WPA and CPA, so contact me if you would like to join the very small ncs group (all on the eastern side of Pa).

Steve,

I was surprised that the RsID in Fldigi recognized the ALE mode. A message popped up on my Fldigi on the bottom of the screen that said the mode was ALE and it is not supported in Fldigi. It only displayed momentarily. There wasn't a problem with interference because the Pa NBEMS net didn't start yet and I moved to 1000 Hz on the waterfall. I was just curious to know what the activity was. It was the first time I've seen activity there around net time.

7396. PA NBEMS QSY as of Sunday April 2

Yahoo group: paNBEMS (2012 — 2018)
Date: 2017-03-27 15:43:58 UTC
From: barryfeierman at yahoo
Topic: 7396 Message: 7396

********** PLEASE READ ********** NET QSY *********

The Pa nbems net has been experiencing extremely poor conditions on 40 meters at 11 am due to the Ionosphere's MUF staying below 6 MHz.
This creates a "skip zone" or a donut hole in propagation.
I often hear on 40 meters at 11:00 am ground-wave stations < 10 miles away, and then I copy stations by sky wave >200 miles from me. That leaves a huge gap in propagation.

Being above the MUF (vertical incident frequency) makes it very difficult to run a state-wide net on 40 meters. And the MUF is staying below 6 MHz most days.

Our four net control ops are all on the eastern side of PA, within 100 miles of Philadelphia, and about the only ops who regularly copy a net control are in WPA, NY, Ohio, and VA. We have relied heavily on relay stations in WPA (thank you).

Fickle forty meters is only going to get worse in the coming years for propagation distances of 10 miles to 300 miles.

****

The four PA NBEMS net control operators (K3EUI, WN3LIF, NY3J, N3FLL) have made the decision to QSY to the following times and frequencies as of April 2.

NEW PA NBEMS net frequency: 3.5850 MHz (usb dial frequency)
1500 Hz waterfall frequency

If there is QRM or if the frequency is busy, tune down to 3.584 MHz
Reason: 80 m is always below the MUF for d=100km
Translation: 80 meters in the early morning hours has NO SKIP ZONE

NEW TIME: Sundays at 0800 AM local time
Reason: at 11:00 am the 80m band is closing down due to high absorption
So we decided to move the net to 0800 hr.
We note that some of the PEMA voice nets on 75m are also around 9 am.

Mode: the net controls will decide on the best mode, but it is likely that we will continue with Olivia 8/500 or CONT 8/500 for checkins, and will probably continue to use MFSK32 for traffic. I've experimented a bit with THOR 22 for checkins and for traffic..... THOR 22 (about 80 wpm) is a good optional choice, and is very tolerant of frequency shifts, has FEC, and uses what is called "incremental frequency shift" (only the changes in tones is measured).
So on occasions, I may opt for THOR 22 for both checkin and traffic.
Keep your RxID on at all times.

Many of us find we copy MFSK best if we carefully tune to the sender's WF center frequency, and turn OFF the optional AFC button in lower right of the FLDIGI window. Keep your FLDIGI digital squelch turned OFF.
Translation: it is not so important that we each be right on 1500 Hz water fall..... it is

important that we are all on the net control's frequency.

When I monitor or run the Pa nbems net, I often see checkins moving around +/- 20 Hz or more at times.

Only the net control, and anyone sending traffic, should turn ON the TxID.
We should all keep our RxID on at all times.

I realize moving the net to 80m and at 0800 hr may be a problem for some, or even for many. But continuing to run the net at 11:00 am on fickle forty has just proven to be nearly impossible goal.

Let's give 80 meters at 8 am a try for 6 months, then re-evaluate our QSY.

I appreciate feedback and participation in the net, and hope our QSY leads to more better copy and less frustration.

Barry,

Are you aware that the "Mid-Atlantic NBEMS Training Net" is already running on that same frequency at that same exact time? At least that is the info I have in my Calendar.

Yes... that is a net that I started about 6 months ago to TEST
propagation on 80m at 8am.

The MidAtlantic net will be deleted .... it served its purpose.

It will be interesting to see if the NY nbems and the NJ nbems nets
also move to 80m.

7399. Fwd: Fwd: log for pa nbems net 8am sunday 28

Yahoo group: paNBEMS (2012 — 2018)
Date: 2017-05-28 13:39:12 UTC
From: Ron Wenig
Topic: 7399 Message: 7399
Attachments: 1 described; binary payloads are missing from this source WARC

Sorry for the poor net. I wasn't copying stations too well today. I'll be interested to know how well stations copied me and if there are any stations that copied me but I missed your check in. It was a good net for band conditions and a lot of people are probably away for the holiday. Thanks for all of the stations that support the Pa NBEMS. Spread the word because it's a great net and lots of fun. It's a good activity to do while drinking that 2nd cup of coffee. It's also a good way to test state wide communications. Have a great Memorial Day Holiday and God Bless our troops.

73, Ron NY3J

7400. Copied from 8:00am Net on 3.585 THIS MORNING

Hi Jim,

It was good to hear you on the Pa NBEMS net this morning. You had a good signal here in Bensalem, Pa near Philadelphia.

Fldigi sends and receives images with the mode MFSK32 or the faster mode MFSK128. MFSK128 is not used on HF because of it's band width. Because of the speed of sending images we have to limit the size of the file by editing it. So usually the image you received is average size. The operation of sending images is similar to FAX.

The images are automatically stored on your hard drive after successfully receiving them. From the Fldigi screen you can click File, Folders, Fldigi configuration. Then double click images. Or from you desktop received images are saved in the default folder $HOME/.fldigi/iamges in Linux or username\fldigi.file\images in Windows. You may be able to increase the size of the images by editing it with Paint but the quality may suffer.

Jim,

I forgot to ask. Since this is a training net and practice for statewide communications I was interested in hearing a signal report from you and others on how well you copied stations during the net. Here is a list of other stations that checked in.

N3FLL
K3EUI
KD9XB
NY3J
WN3LIF
W1QH
K3HPS
KB1BH
KB3DXU
K3FKW
AB3GB
KC8HFH
N1NRP
N6RVA
KC2VUT
KB2VLP
KD2DO
KW3U
N3TN

Sometimes the stations in eastern Pa don't copy the western Pa stations so any relays during the net are appreciated.

In FLdigi>Folders>FLdigi.config>images
Find the image of interest and open it in Paint.
In paint, find Resie and Skew and use that to enlarge the picture

7405. Pa NBEMS Net Sunday Sept 17

Yahoo group: paNBEMS (2012 — 2018)
Date: 2017-09-16 13:32:11 UTC
From: Ron Wenig
Topic: 7405 Message: 7405

Hello Everyone,

I'll be the net control station for the Pa NBEMS net on Sunday, Sept 17, at 0800L.

Please note the new time and frequency - 0800L on 3585 mHz USB at 1500 Hz on the waterfall.

Last week net control station WN3LIF was successful using Thor 22 for check ins so this week I am going to continue with the mode Thor 22 for both check ins and traffic. Please send comments on what you think of the mode and also how propagation is. Please spread the word about the net. It's a great way to practice with state-wide communications.

73, Ron NY3J

7406. Re: Pa NBEMS Net

Good net this morning. Thor 22 worked well for check ins. It was good to see a bunch of new stations checking in. Bucks County rules with 5 check ins :-)

One thing to check. There is a new audio alert function in Fldigi. You can set the alert to ring a bell when you receive a new Flmsg. The problem is if you have the sound card you use for Fldigi as the default sound card the sounds will go out over the air. It looks the ringing sound was sent at 500 Hz on the waterfall. I recommend, if you're not sure about the default sound card then turn off this alert function. It would be true for all Windows sounds.

Thanks for the support everyone and see you next week on the Pa NBEMS net.

From: Ron Wenig
Topic: 7407 Message: 7408

Thanks for the information Dave. Both the Salvation Army and the
American Red Cross are doing a lot of good work during this crisis.

The SATERN NBEMS net is Saturday, 1300L, 14.065 mHz, 1000 Hz on waterfall.

For local nets there is:

NY NBEMS net on Saturday, 1000L, 3.583.5mHz, 1500 Hz on waterfall
Pa NBEMS net on Sunday, 0800L, 3.585mHz, 1500 Hz on waterfall
NJ NBEMS net on Sunday, 0930L, 3485.5mHz, 1500 Hz on waterfall

Check RxID for the mode that is being used. You can never get enough
practice Does anyone know of any other NBEMS nets.

My WX macro is not working.
The setup for WX has a URL that works when I copy and past it to the browser
but when I pick on the "Search on web" button it goes to a completely different web site.

Does you WX macro work?

Don, NN8B

Hi Don,

The wx macro in one of the latest versions of Fldigi broke. I think
it's because of a change in the main site. It was fixed in the latest
verion of Fldigi ver4.0.10.

Shortwave Radiogram this weekend is mostly in the usual MFSK32, but one news item is in Thor22, with text and an image.

Tune in Sunday via WRMI Florida:
0600-0630Z 2:00-2:30am EDT 7730 kHz
2030-2100Z 4:30-5:00pm EDT 11580 kHz
2330-2400Z 7:30-8:00pm EDT 11580 kHz
Use AM, USB, or LSB

Details and schedule:

http://swradiogram.net/post/166116856627/shortwave-radiogram-7-8-october-2017-special
http://swradiogram.net/post/166116856627/shortwave-radiogram-7-8-october-2017-special

K3CC Skip

Hi Skip ..... long time no hear. Hope you are well.

The PA NBEMS moved to 3585.0 (USB dial freq) at 0800 hrs a while back,
so now there is no "skip zone" (no donut hole).
Propagation is superb on 80m early morning hours.

Hope to see you next Sunday.
ps - The NY and NJ nbems nets also have moved to 80 meters

From: Ron Wenig
Topic: 7415 Message: 7418

Hi Skip,

Good to hear from you. The Pa NBEMS net is now at 0800 hours on 3585 kHz, USB, 1500 Hz on the waterfall. The check in mode has been Thor 22 but leave your RxID on in case net control wants to use another mode. Frank, N3FLL, was net control this morning and did a great job. The band was pretty good and it was good seeing the Western Pa folks checking in. Getting back to the point of good statewide communications.

Right after the Pa net is the NJ net on 3584.5 at 0930. Hope to see you on the waterfall next week.

Please note changes to the Pa NBEMS net:

> Net Frequencies
> PaNBEMS HF net meets every Sunday morning at 0800 hr (local time) on an 80 meter frequency of 3585.0 kHz (USB VFO dial frequency). We use a variety of check-in modes, including THOR 22, Olivia and Contestia 8/500. We mostly use MFSK32 for traffic. Since 3.5 MHz is below the vertical incident critical frequency (MUF) we do not experience a "skip zone" (donut hole of coverage) on 80 meters, and have less need for relay stations. Propagation is often excellent for 10 miles out to over 300 miles on 3585 kHz at 0800 hrs.
>

> Good antennas for 80 meters NVIS high-angle radiation are low horizontal or inverted V half-wave dipoles (1/8th wave above ground) rather than vertical antennas (which put out a low-angle of elevation signal). When transmitting, be sure your ALC meter reads ZERO to avoid distortion of the digi modes. Remember FLAMP must first be open and running in order to receive FLAMP files. Each FLMSG message opens in a new window.
>

> Backup Frequencies:
> We no longer regularly monitor backup frequencies on 30, 40 and 60 meters, but the emergency backup frequencies remains 10.135 MHz on 30 meters, 7072.5 kHz on 40 meters, and channel 4 (5371.5 kHz) USB on 60 meters, all with 1500 Hz center frequency on waterfall.
>

> HELPFUL hints
> We now ask for all stations to keep your RxID turned on at all times, but to turn OFF your TxID unless you are sending traffic. Also, when checking in, put two CR's (hit ENTER key twice) into your Tx window before you identify to allow proper spacing of signals checking in.

Good Morning All,

Good net today on the first day of Standard Time. It looks like everyone remembered to change their clocks back. I saw more new check ins from stations in Pa, which is a good thing to see our interstate communications at work. It's also a good thing to see the out of state check ins because if anything happened we would need out of state relays. Here's a list of the check ins. I hope to see everyone on the waterfall next week. Also, any questions, comments or signal reports would be appreciated.

Hi Jim,

It was good to see you this morning on the net. I thought the cat cartoon would be fun to send as an image. I have a cat and I know that's what my cat would probably say :-)

When you receive an image it is automatically stored. In Fldigi click File, Fldigi config. Double click images. The images are stored by date so look for pic_2017-11-05_133229z.png. Here's a link to the image.

https://me.me/i/i-do-not-run-on-daylight-saving-time-www-facebook-com-cat-addicts-3763152

On a net usually net control tells everyone to turn off TxID but leave on RxID while checking in. While checking in if everyone had TxID on then the net frequency would keep changing. Leaving your RxID on then you will stay "zero beat" on net control's center frequency and also change modes when net control changes. For mode MFSK32, which is sensitive to the receive frequency, the person who is sending traffic turns on TxIDso that they can then change the other stations to match what that person's center frequency is. There is a better success rate of receiving the traffic.

Ed,

Sorry to hear about the antenna tune problem on 75/80. The net moved from 40 to 80 because it was difficult to get state wide coverage because of the skip on 40, especially receiving stations close by. Lots of good signals received from stations out of state which acted as relays for the Pa stations but not a good way to run a state wide net. 80 does well with NVIS type antennas close to the ground. Maybe you could put up a portable type wire antenna as a compromise. I'm about 50 miles from you and the other 2 net controls, K3EUI and N3FLL are both in Chester County so we may be able to copy you ok with a low antenna. It's always fun experimenting with NVIS antennas.

Fascinating..... but the "efficiency" of a Hamstick style antenna (7 ft on each side)
Is only about 1 to 5 % So you would be better off throwing 70 ft of wire into a tree and
Feeding it like an "end fed" with a tuning coil/capacitor.

MFJ and MYAntenna now have 80m "end fed" antennas about 70 ft long with a
Matching balun, fed with normal 50 ohm coax.

No short antenna "tuned" to 80 meters will radiate well.
Also... the feed point impedance of two back to back Hamsticks is far less than 50 ohm for coax feed, so you might need a matching inductor placed across the input terminals of the Hamsticks.

Then again, it just may work well enough!

Oops.... correction.

The 80m end feds are half-wave, or about 130 ft long.
Still, with a matching balun, they can be fed with normal 50 ohm coax.

This would allow you to tune up on 80/40/20/10 meters.
I've seen two in action.... not bad.
Just throw one end up into a tree.

Sounds good Ed. I'm always looking at antennas to cut down on noise issues that I have at my QTH. It will be good to have another eastern Pa section Ham checking in :-)

Ed, do you know about the Chester County NBEMS net on the Chester County ARES/RACES repeater, Thursday night after the voice net?

It has been 3-4 yrs since I have done digital with them….. if my memory servers me , that was on a UHF repeater. Not sure I can still do that, but please give me the details and I will look into it.

Sounds good Ed. I'm always looking at antennas to cut down on noise issues that I have at my QTH. It will be good to have another eastern Pa section Ham checking in :-)

Ed, do you know about the Chester County NBEMS net on the Chester County ARES/RACES repeater, Thursday night after the voice net?

Ed,

Sorry to hear about the antenna tune problem on 75/80. The net moved from 40 to 80 because it was difficult to get state wide coverage because of the skip on 40, especially receiving stations close by. Lots of good signals received from stations out of state which acted as relays for the Pa stations but not a good way to run a state wide net. 80 does well with NVIS type antennas close to the ground. Maybe you could put up a portable type wire antenna as a compromise. I'm about 50 miles from you and the other 2 net controls, K3EUI

and N3FLL are both in Chester County so we may be able to copy you ok with a low antenna. It's always fun experimenting with NVIS antennas.

Ed,

Frank, N3FLL, is the net leader and does a great job with the practice session and training Hams just getting into NBEMS. I'm not sure of the various inputs but I use 446.175 minus offset with a PL of 100. The voice net starts at 1930, Thursday nights and the NBEMS net starts immediately after.

Hi Jim,

It was good to see you this morning on the net. I thought the cat cartoon would be fun to send as an image. I have a cat and I know that's what my cat would probably say :-)

When you receive an image it is automatically stored. In Fldigi click File, Fldigi config. Double click images. The images are stored by date so look for pic_2017-11-05_133229z.png. Here's a link to the image.

https://me.me/i/i-do-not-run-on-daylight-saving-time-www-facebook-com-cat-addicts-3763152

On a net usually net control tells everyone to turn off TxID but leave on RxID while checking in. While checking in if everyone had TxID on then the net frequency would keep changing. Leaving your RxID on then you will stay "zero beat" on net control's center frequency and also change modes when net control changes. For mode MFSK32, which is sensitive to the receive frequency, the person who is sending traffic turns on TxIDso that they can then change the other stations to match what that person's center frequency is. There is a better success rate of receiving the traffic.

Hi Jim,

It's been good to hear you checking into the Pa NBEMS net on Sunday morning at 0800. It's always good to get reception reports especially for the net control. We want to make sure that we are reaching out to all areas of the state. The purpose of the net is to be sure that we have statewide coverage so that we will have communications in case of the need for emergency services and to practice passing traffic throughout the state. Out of state communications is also an important part of an emergency plan.

We are finding out that 80 meters early in the morning is so much better than 40 meters for the net for this purpose. On 40 meters it seemed that we were loosing our local contacts and gaining contacts outside of the area. So we will probably stick with 80 meters especially during the low Sun spot cycle.

It seems like the weak signal digital modes have really taken over, especially FT8. I guess Hams have found a way to increase their contacts and reach out with a minimal amount of equipment. I don't think it was the intent of the authors to have stations running high power in order to gain more contacts. Like you I have noticed an expansion of band width of some of the weak signal modes. Hopefully this won't encroach on the CW frequencies or the frequencies that normally are used for the digital nets.

Thanks again for checking in and your comments here. Happy Thanksgiving and look for seeing your continued activity on the Pa NBEMS net.

Pa NBEMS net

Hi Jim KW3U

As Ron NY3J has mentioned, the Pa NBEMS net has moved to a different frequency and to a different time of day. The old 40 m (7072.5 kHz at 11:00 am) proved to be impossible to use within the state of Pa due to the "skip zone" (donut hole) on 40m often extending out to over 100 miles.

A few months ago we moved the net to 80m (3585.0 kHz.... that's the VFO frequency with radio in USB mode) at 0800 hr. The absorption on 80m gets way too high to keep the 11:00 am time.

We've been very successful for the past few months, with 20-30 checkins and a half-dozen pieces of traffic using MFSK 32, including small images. We ask for resends of traffic, but rarely need a resend.

Our check in mode has been Olivia 8/500 (30 wpm) or Contestia 8/500 (60wpm). So Cont 8/500 is twice the speed for same bandwidth as Olivia 8/500. Lately we have been experimenting with THOR 22 (22 baud, 78 wpm) which has a slower symbol rate than Olivia (longer tone duration) but with FEC and incremental frequency keying (IFK) Thor is very tolerant of frequency drift and doppler shifts due to a rising/falling ionosphere.

MFSK16 may be more "sensitive" than the other modes, but you've got to be within a few Hz of the sender to get good copy.

Usually the net control keeps the TxID on at all times, so all stations in the net ought to keep their RxID on at all times.

The vertically incident "critical frequency" (MUF for 90 degree straight upwards propagation) is around 5-6 MHz lately, making 3585 kHz an almost perfect frequency to avoid skipping over nearby (10-100 mile) stations.

60m may be the "ideal" band propagation wise for a Pa NBEMS net, but with only 5 channels and nets and others using these frequencies, it was decided not to monitor 60m as a backup.

Look forward to your participation.

Hi Rod,

I am one of the net control operators for the Pa NBEMS net.? The net meets every Sunday morning at 0800 on 3585 USB.? I'm not sure if 80 meter propagation will reach MN but you are welcome to check in. The net used to meet at 1100 on 7072.5 but we found that 40 meters at 1100 was not the best for a state wide net.? Net control was not copying stations within 100 miles but we were copying check ins outside of the state.? As a matter of fact we had to use stations in Canada to relay the closer check ins.? So we changed to 80 meters at an earlier time and it seems to be working very well.

We have been experimenting with different modes.? We used to use Olivia 8-500 for check ins and MFSK32 for traffic.? To speed things up we have been using Thor 22 for check ins and MFSK32 for traffic. I like MFSK32 for traffic because you can also use it for images.

I like to ask for check ins with or without traffic starting with Pa stations in the west, then central then east.? After the Pa stations I'll ask for call areas.? It's best if stations send their check ins with a line space before and after their text to separate the check in from the unscquelched characters.? An example of a check in is:

NY3J Ron Bucks Co Pa QTC 1 net

Q signals are ok for the net to speed things up.? Some net controls ask for stations with traffic first so that they can pass their traffic before stations with no traffic check in.? Macros for Fldigi are very handy to save typing.? I have created a separate macro for the Pa NBEMS net.? Good luck with your NBEMS net and let us know the time and frequency and maybe some of the Pa stations will be able to check in.

7446. Re: [paNBEMS] best practices for data

Yahoo group: paNBEMS (2012 — 2018)
Date: 2017-12-14 18:11:04 UTC
From: barryfeierman at yahoo
Topic: 7442 Message: 7446

Dear Rod?? N0GQM

This is such a general question.....

In terms of propagation within one state, let's say? 10 miles out to?
300 miles? (like in Pennsylvania)
we discovered that the only band we can use with no "skip zone" (donut
hole) is? 80- meters early in the morning.

So our PA NBEMS? net is at? 0800 hr? (Sunday) on? 3585.0 kHz (usb? VFO
dial freq).

We used to be on? 40 meters? (7072.5 kHz) at?? 11 am? but that proved to
be awful in terms of propagation
with the declining solar cycle.

Probably? 60 m? would work well, but with channels and antennas and some
older rigs that did not tx on 60 meters
we gave that up.?? But? 5 MHz? is an ideal frequency for NVIS propagation.

Modes?

We usually take checkins with? Olivia 8/500? (64 baud, 30 wpm, 500 Hz
wide) or now we've been using
THOR 22 (same bandwidth, but at? 78 wpm)? and almost as robust as Olivia.
We've tried? CONTESTIA? 8/500? (same bandwidth, but? 60 wpm) with CAPS
only and that was fine.

MFSK, THOR, Olivia? are all almost constant amplitude modes, so easy to
catch and listen to and tune in.

On 80m? the? PSK? modes exhibit too much rapid flutter .....? so we
don't use PSK.

80 m gets noisier as the morning moves on .... so by? 10 am or? 11 am??
80m is way too noisy and goes "local".
At noon, I never hear anyone on? 75 or 80 meters.

For traffic? (FLMSG) we almost always use? MFSK 32? (630 Hz? wide, 32
baud,? and about 120 wpm)? which is fine IF stations
are locked on to the? sender's WF frequency.

So our net control, and all sending traffic, always send a? TxID at the
start of every transmission.
All receiving stations keep their? RxID? on at all times.

The Pa NBEMS? net has been averaging about? 20 checkins each Sunday
morning, with perhaps 4-8 pieces of traffic.

MFSK also allows you to send SMALL? images in a few minutes.

Is that what you are looking for?

Good luck,

Barry? k3eui
Pa NBEMS? net manager
(near Phila)

Attachments: 1 described; binary payloads are missing from this source WARC

Relaying an announcement from the NY NBEMS NCS.

Also, remember the Pa NBEMS net is Sunday, at 0800 EST on 3585 kHz, 1500 waterfall center frequency.

The NJ NBEMS net is Sunday, at 0930 EST on 3584.5 kHz, 1500 waterfall center frequency.

Hi Gang,
I bought a TS 590SG to replace my Yaesu....My computer seems to close the mic port in a few seconds
Then I can't send....I haven't been able to XMIT FLdigi....
I'm going to remove all of my USB ports and start over agn and see if the mic stays open.....

I'm using the sound card in the TS 590SG, I tried it with an interface and had the same results....

If all works I'll have some new antennas this summer with 2 new towers..... M2 40 mtr 3el yagi
and another 80 meter antenna....

Hi Skip,

Congratulations on the Kenwood TS-590SG. I have a TS-590S that I bought in 2011 and I love it. I heard that the TS-590SG is even better.

I've heard that sometimes the USB Audio Codec for the Kenwood's built in audio card will get corrupted during initial install or after a Windows update. Try uninstalling the USB Audio Codecs for the Microphone and the Speakers. Then unplug and reconnect the USB cable from the radio so that Windows reinstalls the drivers.

It's also possible that RF is getting into the USB of the radio. That will cause some weird problems. Make sure your ALC is zero and the power is not too high. Try transmitting into a dummy load to rule out the antenna. Let us know what you find.

Hello Ed,

We have created a new group for Pa NBEMS on groups.io

https://groups.io/g/panbems

If you go there you can sign up for the new group. On the new group I have uploaded a custom form call Daily Shelter Report that the Chester County Pa ARES group have been using. You would download thie form and save it to your NBEMS.files\CUSTOM folder. See the Flmsg help section on how to use Custom Forms.

Hope to see you on the groups.io site for more questions.

From: Ron Wenig
Topic: 7461 Message: 7462

Hi Skip,

Here's what I did. With the TS-590 usb connected I brough up my device manager. Then I expanded Audio inputs and outputs. I right clicked the two USB Audio Codecs and left clicked Uninstall Device and delete associated files. If you have USB sound devices that you know you don't have do the same with them. Don't worry about USB devices for your com ports because that's only for rig control. Then reboot, bring up Device Manager and reconnect your USB cable from the computer to your TS-590. Windows will reinstall the USB Audio Codecs and you should see them in Audio inputs and outputs. Look at the properties and check for error messages. Then right click the speaker icon on your desktop taskbar. Go to both Playback and Recording and bring up properties on both USB Audio Codecs. Adjust the level sliders to at least 1/2 way. You may have to change them to get proper levels on your radio. If the playback is too low then the VOX on your TS-590 won't activate. Too much level then you will introduce ALC and your signal will be distorted. The ALC should be zero. Your receive audio should be enough so that the diamond on Fldigi is green when you receive a signal.

If you get the same message then it could be a conflict with the USB serial connection. The one USB port multiplexes between sound and serial device. If that is the case then do the same thing with the USB com port for the radio. You can determine the proper one by unplugging and plugging in the USB radio cable in back of the radio. You can also turn off the radio and the power supply. The USB port is still powered up when the power supply is on. You will need to get the driver from the Kenwood site. Mine is listed as Silicon Labs CP210x USB to UART Bridge.

Last thing to think about is a microprocessor reset following the user manual. You will loose all of your settings but it may clear up a glitch in the USB port. Very last thing to think about is a hardware problem. I've read a lot of information on the TS-590 forum about how sensitive the USB port is to static charges. A lot of people unplug the USB port especially during lightning storms. Good luck and let us know.

Skip,

Great that you found the issue. I forgot all about the USB sleep mode.
Microsoft will do that for you because they think they are helping you :-)

It will be good to see you back on the waterfall on Sunday. I know what
you mean about the decision to move. I'm always thinking about moving
and downsizing. The problem is antenna restrictions on just about
anywhere you go these days.

WT, WN3LIF,

Thanks for taking the net this Sunday, May 6. Since it's the day of the Warminster Amateur Radio Club's Hamfest and EPA Conference I wanted to let you know that a lot of the checkins from the eastern counties will be absent from the net. I didn't want you to think that they went AWOL on you :-)

It looks like it's going to be an interesting conference with 2 exciting speakers. Joe Taylor, K1JT, talking about his WSJT-X program and Cory Sickles, WA3UVV, from Yaesu talking about System Fusion.

I was hoping to see your name on the list of dignitaries but I know how busy you must be. Have a good net. If any of the Pa NBEMS members go say hello to me. I'll be out helping with the parking.

Another stellar net by my NBEMS heroes.

But did everyone catch/notice the Field Day enhancement?

Utilize your NBEMS prowess, garner 100 BONUS points and dazzle those
around you by sending a Radiogram to our Section Manager.

How cool is that?!?!?

Jim,

Good information and how convenient with our very own Pa Section Emergency Coordinator WN3LIF as the Net Control Station for the Pa NBEMS net on June 24th. Just set up an NBEMS station at your Field Day site and create a Radiogram with Flmsg. Follow NTS traffic protocol and enter the required fields. Address it to Section Emergency Coordinator, WN3LIF. From the Field Day rules:

7.3.5. Message Origination to Section Manager: 100 bonus points for origination of a formal
message to the ARRL Section Manager or Section Emergency Coordinator by your group from its
site. You should include the club name, number of participants, Field Day location, and number
of ARES operators involved with your station. The message must be transmitted during the
Field Day period and a copy of it must be included in your submission in standard ARRL
radiogram or no credit will be given. The message must leave or enter the Field Day
operation via amateur radio RF.

For those who didn't get a chance to check this morning here is the traffic from WN3LIF.

73 and good luck with Field Day

Ron NY3J
